[43215] The function of HPSE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.2.Inositol 1,4,5-trisphosphate 3-kinase b (ITPKB, Accession NP_002212.1) is another GAM2608 target gene, herein designated TARGET GENE. ITPKB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ITPKB, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ITPKB BINDING SITE, designated SEQ ID:3880, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43216] Another function of GAM2608 is therefore inhibition of Inositol 1,4,5-trisphosphate 3-kinase b (ITPKB, Accession NP_002212.1), a gene which is a type B inositol 1,4,5-triphosphate 3 kinase. Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ITPKB.

[43217] The function of ITPKB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.KIAA0326 (Accession XP_034819.1) is another GAM2608 target gene, herein designated TARGET GENE. KIAA0326 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0326, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0326 BINDING SITE, designated

SEQ ID:16873, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43218] Another function of GAM2608 is therefore inhibition of KIAA0326 (Accession XP_034819.1) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0326.

[43219] KIAA1826 (Accession XP_040784.1) is another GAM2608 target gene, herein designated TARGET GENE. KIAA1826 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1826, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1826 BINDING SITE, designated SEQ ID:13511, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43220] Another function of GAM2608 is therefore inhibition of KIAA1826 (Accession XP_040784.1) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1826.

[43221] KIAA1853 (Accession XP_045184.1) is another GAM2608 target gene, herein designated TARGET GENE. KIAA1853 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1853, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1853 BINDING SITE, designated SEQ ID:2810, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43222] Another function of GAM2608 is therefore inhibition of KIAA1853 (Accession XP_045184.1) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1853.

[43223] Lysosomal-associated membrane protein 1 (LAMP1, Accession NP_005552.2) is another GAM2608 target gene, herein designated TARGET GENE. LAMP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LAMP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LAMP1 BINDING

SITE, designated SEQ ID:6326, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43224] Another function of GAM2608 is therefore inhibition of Lysosomal-associated membrane protein 1 (LAMP1, Accession NP_005552.2), a gene which presents carbohydrate ligands to selectins. Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LAMP1.

[43225] The function of LAMP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM483.1.Lysosomal-associated protein transmembrane 4 alpha (LAPTM4A, Accession NP_055528.1) is another GAM2608 target gene, herein designated TARGET GENE. LAPTM4A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LAPTM4A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LAPTM4A BINDING SITE, designated SEQ ID:6126, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ

ID:245.

[43226] Another function of GAM2608 is therefore inhibition of Lysosomal-associated protein transmembrane 4 alpha (LAPTM4A, Accession NP_055528.1) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LAPTM4A.

[43227] Luteinizing hormone/choriogonadotropin receptor (LHCGR, Accession NP_000224.1) is another GAM2608 target gene, herein designated TARGET GENE. LHCGR BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LHCGR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LHCGR BINDING SITE, designated SEQ ID:15507, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43228] Another function of GAM2608 is therefore inhibition of Luteinizing hormone/choriogonadotropin receptor (LHCGR, Accession NP_000224.1) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LHCGR.

[43229] LOC114971 (Accession XP_054936.4) is another GAM2608 target gene, herein designated TARGET GENE. LOC114971 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC114971, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC114971 BINDING SITE, designated SEQ ID:14175, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43230] Another function of GAM2608 is therefore inhibition of LOC114971 (Accession XP_054936.4) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC114971.

[43231] LOC147136 (Accession XP_300674.1) is another GAM2608 target gene, herein designated TARGET GENE. LOC147136 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC147136, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC147136 BINDING SITE, designated SEQ ID:18650, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43232] Another function of GAM2608 is therefore inhibition of LOC147136 (Accession XP_300674.1) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147136.

[43233] LOC150279 (Accession XP_086820.1) is another GAM2608 target gene, herein designated TARGET GENE. LOC150279 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC150279, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150279 BINDING SITE, designated SEQ ID:8823, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43234] Another function of GAM2608 is therefore inhibition of LOC150279 (Accession XP_086820.1) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC150279.

[43235] LOC158863 (Accession XP_098999.1) is another GAM2608 target gene, herein designated TARGET GENE. LOC158863 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC158863, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158863 BINDING SITE, designated SEQ ID:5453, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43236] Another function of GAM2608 is therefore inhibition of LOC158863 (Accession XP_098999.1) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158863.

[43237] LOC201287 (Accession XP_113947.1) is another GAM2608 target gene, herein designated TARGET GENE. LOC201287 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC201287, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC201287 BINDING SITE, designated SEQ ID:15360, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43238] Another function of GAM2608 is therefore inhibition of LOC201287 (Accession XP_113947.1) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201287.

[43239] LOC220486 (Accession XP_165391.2) is another GAM2608 target gene, herein designated TARGET GENE. LOC220486 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC220486, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC220486 BINDING SITE, designated SEQ ID:5591, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43240] Another function of GAM2608 is therefore inhibition of

LOC220486 (Accession XP_165391.2) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC220486.

[43241] LOC253609 (Accession XP_172986.2) is another GAM2608 target gene, herein designated TARGET GENE. LOC253609 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC253609, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC253609 BINDING SITE, designated SEQ ID:17912, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43242] Another function of GAM2608 is therefore inhibition of LOC253609 (Accession XP_172986.2) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC253609.

[43243] LOC253805 (Accession XP_172854.1) is another GAM2608 target gene, herein designated TARGET GENE. LOC253805 BINDING SITE is a target binding site found in

the 3` untranslated region of mRNA encoded by LOC253805, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC253805 BINDING SITE, designated SEQ ID:7852, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43244] Another function of GAM2608 is therefore inhibition of LOC253805 (Accession XP_172854.1) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC253805.

[43245] LOC283116 (Accession XP_208043.1) is another GAM2608 target gene, herein designated TARGET GENE. LOC283116 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283116, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283116 BINDING SITE, designated SEQ ID:8224, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:245.

[43246] Another function of GAM2608 is therefore inhibition of LOC283116 (Accession XP_208043.1) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283116.

[43247] LOC283830 (Accession XP_211223.1) is another GAM2608 target gene, herein designated TARGET GENE. LOC283830 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283830, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283830 BINDING SITE, designated SEQ ID:16975, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43248] Another function of GAM2608 is therefore inhibition of LOC283830 (Accession XP_211223.1) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283830.

[43249] LOC284996 (Accession NP_775918.1) is another

GAM2608 target gene, herein designated TARGET GENE. LOC284996 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284996, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284996 BINDING SITE, designated SEQ ID:13549, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43250] Another function of GAM2608 is therefore inhibition of LOC284996 (Accession NP_775918.1) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284996.

[43251] LOC285595 (Accession XP_211948.1) is another GAM2608 target gene, herein designated TARGET GENE. LOC285595 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285595, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285595 BINDING SITE, desig-

nated SEQ ID:13348, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43252] Another function of GAM2608 is therefore inhibition of LOC285595 (Accession XP_211948.1) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285595.

[43253] LOC285656 (Accession XP_211976.2) is another GAM2608 target gene, herein designated TARGET GENE. LOC285656 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285656, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285656 BINDING SITE, designated SEQ ID:13348, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43254] Another function of GAM2608 is therefore inhibition of LOC285656 (Accession XP_211976.2) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC285656.

[43255] LOC286460 (Accession XP_208425.1) is another GAM2608 target gene, herein designated TARGET GENE. LOC286460 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286460, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286460 BINDING SITE, designated SEQ ID:8964, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43256] Another function of GAM2608 is therefore inhibition of LOC286460 (Accession XP_208425.1) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286460.

[43257] LOC339005 (Accession XP_290661.1) is another GAM2608 target gene, herein designated TARGET GENE. LOC339005 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339005, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339005 BINDING SITE, designated SEQ ID:3940, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43258] Another function of GAM2608 is therefore inhibition of LOC339005 (Accession XP_290661.1) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339005.

[43259] LOC339263 (Accession XP_294889.1) is another GAM2608 target gene, herein designated TARGET GENE. LOC339263 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339263, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339263 BINDING SITE, designated SEQ ID:2561, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43260] Another function of GAM2608 is therefore inhibition of LOC339263 (Accession XP_294889.1) . Accordingly, utili-

ties of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339263.

[43261] LOC348989 (Accession XP_302935.1) is another GAM2608 target gene, herein designated TARGET GENE. LOC348989 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348989, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348989 BINDING SITE, designated SEQ ID:13348, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43262] Another function of GAM2608 is therefore inhibition of LOC348989 (Accession XP_302935.1) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348989.

[43263] LOC349440 (Accession XP_300513.1) is another GAM2608 target gene, herein designated TARGET GENE. LOC349440 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

LOC349440, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349440 BINDING SITE, designated SEQ ID:10811, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43264] Another function of GAM2608 is therefore inhibition of LOC349440 (Accession XP_300513.1) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349440.

[43265] LOC55974 (Accession NP_061333.1) is another GAM2608 target gene, herein designated TARGET GENE. LOC55974 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC55974, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC55974 BINDING SITE, designated SEQ ID:17137, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43266] Another function of GAM2608 is therefore inhibition of

LOC55974 (Accession NP_061333.1) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC55974.

[43267] Mastermind-like 2 (drosophila) (MAML2, Accession XP_045716.1) is another GAM2608 target gene, herein designated TARGET GENE. MAML2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MAML2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAML2 BINDING SITE, designated SEQ ID:11423, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43268] Another function of GAM2608 is therefore inhibition of Mastermind-like 2 (drosophila) (MAML2, Accession XP_045716.1) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAML2.

[43269] Mitogen-activated protein kinase kinase kinase 8 (MAP3K8, Accession NP_005195.2) is another GAM2608 target gene, herein designated TARGET GENE. MAP3K8

BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MAP3K8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAP3K8 BINDING SITE, designated SEQ ID:17674, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43270] Another function of GAM2608 is therefore inhibition of Mitogen-activated protein kinase kinase kinase 8 (MAP3K8, Accession NP_005195.2), a gene which is able to activate nf- kappa- b 1 by stimulating proteasome-mediated p. Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAP3K8.

[43271] The function of MAP3K8 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.1.Mitogen-activated protein kinase kinase kinase kinase 5 (MAP4K5, Accession NP_006566.2) is another GAM2608 target gene, herein designated TARGET GENE. MAP4K5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

MAP4K5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAP4K5 BINDING SITE, designated SEQ ID:14765, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43272] Another function of GAM2608 is therefore inhibition of Mitogen-activated protein kinase kinase kinase kinase 5 (MAP4K5, Accession NP_006566.2) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAP4K5.

[43273] Mannan-binding lectin serine protease 1 (c4/c2 activating component of ra-reactive factor) (MASP1, Accession NP_001870.3) is another GAM2608 target gene, herein designated TARGET GENE. MASP1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MASP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MASP1 BINDING SITE, designated SEQ ID:16184, to the

nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43274] Another function of GAM2608 is therefore inhibition of Mannan-binding lectin serine protease 1 (c4/c2 activating component of ra-reactive factor) (MASP1, Accession NP_001870.3), a gene which a complement- dependent bactericidal factor . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MASP1.

[43275] The function of MASP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM40.1.MGC10561 (Accession NP_116036.1) is another GAM2608 target gene, herein designated TARGET GENE. MGC10561 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC10561, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC10561 BINDING SITE, designated SEQ ID:2731, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43276] Another function of GAM2608 is therefore inhibition of MGC10561 (Accession NP_116036.1) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC10561.

[43277] MGC13024 (Accession NP_689501.1) is another GAM2608 target gene, herein designated TARGET GENE. MGC13024 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC13024, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC13024 BINDING SITE, designated SEQ ID:9146, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43278] Another function of GAM2608 is therefore inhibition of MGC13024 (Accession NP_689501.1) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC13024.

[43279] Monocyte to macrophage differentiation-associated (MMD, Accession NP_036461.1) is another GAM2608 target gene, herein designated TARGET GENE. MMD BINDING

SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MMD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MMD BINDING SITE, designated SEQ ID:14690, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43280] Another function of GAM2608 is therefore inhibition of Monocyte to macrophage differentiation-associated (MMD, Accession NP_036461.1) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MMD.

[43281] Matrix metalloproteinase 26 (MMP26, Accession NP_068573.1) is another GAM2608 target gene, herein designated TARGET GENE. MMP26 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MMP26, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MMP26 BINDING SITE, designated SEQ ID:3864, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:245.

[43282] Another function of GAM2608 is therefore inhibition of Matrix metalloproteinase 26 (MMP26, Accession NP_068573.1) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MMP26.

[43283] Matrix metalloproteinase 3 (stromelysin 1, progelatinase) (MMP3, Accession NP_002413.1) is another GAM2608 target gene, herein designated TARGET GENE. MMP3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MMP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MMP3 BINDING SITE, designated SEQ ID:13663, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43284] Another function of GAM2608 is therefore inhibition of Matrix metalloproteinase 3 (stromelysin 1, progelatinase) (MMP3, Accession NP_002413.1) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MMP3.

[43285] Neural precursor cell expressed, developmentally down-

regulated 4 (NEDD4, Accession XP_046129.4) is another GAM2608 target gene, herein designated TARGET GENE. NEDD4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NEDD4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NEDD4 BINDING SITE, designated SEQ ID:15072, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43286] Another function of GAM2608 is therefore inhibition of Neural precursor cell expressed, developmentally down-regulated 4 (NEDD4, Accession XP_046129.4), a gene which ubiquitinates regulatory proteins involved in transcription. Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NEDD4.

[43287] The function of NEDD4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM48.2.Nuclear receptor subfamily 1, group i, member 2 (NR1I2, Accession NP_148934.1) is another GAM2608 target gene, herein designated TARGET GENE.

NR1I2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by NR1I2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NR1I2 BINDING SITE, designated SEQ ID:11884, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43288] Another function of GAM2608 is therefore inhibition of Nuclear receptor subfamily 1, group i, member 2 (NR1I2, Accession NP_148934.1), a gene which binds to a response element in the cyp3a4 gene promoter and activates its expression in response to a wide variety of endobiotics and xenobiotics. Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NR1I2.

[43289] The function of NR1I2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM223.1.Nuclear receptor subfamily 1, group i, member 2 (NR1I2, Accession NP_003880.2) is another GAM2608 target gene, herein designated TARGET GENE.

NR1I2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by NR1I2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NR1I2 BINDING SITE, designated SEQ ID:11884, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43290] Another function of GAM2608 is therefore inhibition of Nuclear receptor subfamily 1, group i, member 2 (NR1I2, Accession NP_003880.2), a gene which binds to a response element in the cyp3a4 gene promoter and activates its expression in response to a wide variety of endobiotics and xenobiotics. Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NR1I2.

[43291] The function of NR1I2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM223.1.Nuclear receptor subfamily 1, group i, member 2 (NR1I2, Accession NP_071285.1) is another GAM2608 target gene, herein designated TARGET GENE.

NR1I2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by NR1I2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NR1I2 BINDING SITE, designated SEQ ID:11884, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43292] Another function of GAM2608 is therefore inhibition of Nuclear receptor subfamily 1, group i, member 2 (NR1I2, Accession NP_071285.1), a gene which binds to a response element in the cyp3a4 gene promoter and activates its expression in response to a wide variety of endobiotics and xenobiotics. Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NR1I2.

[43293] The function of NR1I2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM223.1.Nudix (nucleoside diphosphate linked moiety x)-type motif 4 (NUDT4, Accession NP_061967.2) is another GAM2608 target gene, herein designated TARGET

GENE. NUDT4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NUDT4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NUDT4 BINDING SITE, designated SEQ ID:18737, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43294] Another function of GAM2608 is therefore inhibition of Nudix (nucleoside diphosphate linked moiety x)-type motif 4 (NUDT4, Accession NP_061967.2) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NUDT4.

[43295] Protein kinase c and casein kinase substrate in neurons 1 (PACSIN1, Accession NP_065855.1) is another GAM2608 target gene, herein designated TARGET GENE. PACSIN1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PACSIN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

PACSIN1 BINDING SITE, designated SEQ ID:4408, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43296] Another function of GAM2608 is therefore inhibition of Protein kinase c and casein kinase substrate in neurons 1 (PACSIN1, Accession NP_065855.1) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PAC-SIN1.

[43297] Phosphodiesterase 4d, camp-specific (phosphodiesterase e3 dunce homolog, drosophila) (PDE4D, Accession NP_006194.1) is another GAM2608 target gene, herein designated TARGET GENE. PDE4D BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PDE4D, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PDE4D BINDING SITE, designated SEQ ID:15887, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43298] Another function of GAM2608 is therefore inhibition of Phosphodiesterase 4d, camp-specific (phosphodiesterase

e3 dunce homolog, drosophila) (PDE4D, Accession NP_006194.1), a gene which has similarity to Drosophila dnc, which is the affected protein in learning and memory mutant dunce. Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDE4D.

[43299] The function of PDE4D and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM217.1.Perq amino acid rich, with gyf domain 1 (PERQ1, Accession NP_072096.1) is another GAM2608 target gene, herein designated TARGET GENE. PERQ1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PERQ1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PERQ1 BINDING SITE, designated SEQ ID:13107, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43300] Another function of GAM2608 is therefore inhibition of Perq amino acid rich, with gyf domain 1 (PERQ1, Accession NP_072096.1) . Accordingly, utilities of GAM2608 in-

clude diagnosis, prevention and treatment of diseases and clinical conditions associated with PERQ1.

[43301] Progesterone receptor membrane component 1 (PGRMC1, Accession NP_006658.1) is another GAM2608 target gene, herein designated TARGET GENE. PGRMC1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PGRMC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PGRMC1 BINDING SITE, designated SEQ ID:12615, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43302] Another function of GAM2608 is therefore inhibition of Progesterone receptor membrane component 1 (PGRMC1, Accession NP_006658.1) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PGRMC1.

[43303] Rab5a, member ras oncogene family (RAB5A, Accession NP_004153.2) is another GAM2608 target gene, herein designated TARGET GENE. RAB5A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAB5A, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAB5A BINDING SITE, designated SEQ ID:5501, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43304] Another function of GAM2608 is therefore inhibition of Rab5a, member ras oncogene family (RAB5A, Accession NP_004153.2), a gene which is a rate- limiting component of the machinery regulating the kinetics of membrane traffic. Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB5A.

[43305] The function of RAB5A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM94.1.Ring finger protein 18 (RNF18, Accession NP_065091.1) is another GAM2608 target gene, herein designated TARGET GENE. RNF18 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by RNF18, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of RNF18 BINDING SITE, designated SEQ ID:8224, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43306] Another function of GAM2608 is therefore inhibition of Ring finger protein 18 (RNF18, Accession NP_065091.1) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNF18.

[43307] Rho-associated, coiled-coil containing protein kinase 2 (ROCK2, Accession NP_004841.1) is another GAM2608 target gene, herein designated TARGET GENE. ROCK2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ROCK2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ROCK2 BINDING SITE, designated SEQ ID:19439, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43308] Another function of GAM2608 is therefore inhibition of Rho-associated, coiled-coil containing protein kinase 2 (ROCK2, Accession NP_004841.1), a gene which regulates

cytokinesis, smooth muscle contraction, the formation of actin stress fibers and focal adhesions. Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ROCK2.

[43309] The function of ROCK2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM90.1.Sh3 domain binding glutamic acid-rich protein like 2 (SH3BGRL2, Accession NP_113657.1) is another GAM2608 target gene, herein designated TARGET GENE. SH3BGRL2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SH3BGRL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SH3BGRL2 BINDING SITE, designated SEQ ID:18614, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43310] Another function of GAM2608 is therefore inhibition of Sh3 domain binding glutamic acid-rich protein like 2 (SH3BGRL2, Accession NP_113657.1) . Accordingly, utili-

ties of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SH3BGRL2.

[43311] Single-minded homolog 2 (drosophila) (SIM2, Accession NP_005060.1) is another GAM2608 target gene, herein designated TARGET GENE. SIM2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SIM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SIM2 BINDING SITE, designated SEQ ID:4214, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43312] Another function of GAM2608 is therefore inhibition of Single-minded homolog 2 (drosophila) (SIM2, Accession NP_005060.1), a gene which may be a master gene of cns development. and therefore may be associated with Dysmorphic features, abnormalities of brain development, down syndrome. Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of Dysmorphic features, abnormalities of brain development, down syndrome., and of other diseases and clinical conditions as-

sociated with SIM2.

[43313] The function of SIM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.1.Serine/threonine kinase 38 like (STK38L, Accession NP_055815.1) is another GAM2608 target gene, herein designated TARGET GENE. STK38L BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by STK38L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of STK38L BINDING SITE, designated SEQ ID:8158, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43314] Another function of GAM2608 is therefore inhibition of Serine/threonine kinase 38 like (STK38L, Accession NP_055815.1) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STK38L.

[43315] Transcription factor b2, mitochondrial (TFB2M, Accession NP_071761.1) is another GAM2608 target gene, herein designated TARGET GENE. TFB2M BINDING SITE is a target

binding site found in the 5` untranslated region of mRNA encoded by TFB2M, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TFB2M BINDING SITE, designated SEQ ID:2805, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43316] Another function of GAM2608 is therefore inhibition of Transcription factor b2, mitochondrial (TFB2M, Accession NP_071761.1) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TFB2M.

[43317] Titin immunoglobulin domain protein (myotilin) (TTID, Accession NP_006781.1) is another GAM2608 target gene, herein designated TARGET GENE. TTID BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TTID, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TTID BINDING SITE, designated SEQ ID:10202, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:245.

[43318] Another function of GAM2608 is therefore inhibition of Titin immunoglobulin domain protein (myotilin) (TTID, Accession NP_006781.1), a gene which is a sarcomeric structural protein and therefore may be associated with Limb- girdle muscular dystrophy. Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of Limb- girdle muscular dystrophy, and of other diseases and clinical conditions associated with TTID.

[43319] The function of TTID and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1631.1.Usher syndrome 2a (autosomal recessive, mild) (USH2A, Accession NP_009054.3) is another GAM2608 target gene, herein designated TARGET GENE. USH2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by USH2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of USH2A BINDING SITE, designated SEQ ID:4007, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43320] Another function of GAM2608 is therefore inhibition of Usher syndrome 2a (autosomal recessive, mild) (USH2A, Accession NP_009054.3) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with USH2A.

[43321] ZID (Accession NP_006617.1) is another GAM2608 target gene, herein designated TARGET GENE. ZID BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZID, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZID BINDING SITE, designated SEQ ID:5650, to the nucleotide sequence of GAM2608 RNA, herein designated GAM RNA, also designated SEQ ID:245.

[43322] Another function of GAM2608 is therefore inhibition of ZID (Accession NP_006617.1) . Accordingly, utilities of GAM2608 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZID.

[43323]

[43324] Fig. 8 further provides a conceptual description of a novel bioinformatically detected of the present invention, referred to here as Genomic Address Messenger 3027

(GAM3027), which modulates expression of respective target genes thereof, the function and utility of which target genes is known in the art.

[43325] GAM3027 is a novel bioinformatically detected regulatory, non protein coding, micro RNA (miRNA) gene. The method by which GAM3027 was detected is described hereinabove with reference to Figs. 8-15.

[43326] GAM3027 gene, herein designated GAM GENE, and GAM3027 target gene, herein designated TARGET GENE, are human genes contained in the human genome.

[43327] GAM3027 gene encodes a GAM3027 precursor RNA, herein designated GAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, GAM3027 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of GAM3027 precursor RNA is designated SEQ ID:8, and is provided hereinbelow with reference to the sequence listing part.

[43328] GAM3027 precursor RNA folds onto itself, forming GAM3027 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA

genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[43329] GAM3027 precursor RNA folds onto itself, forming GAM3027 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[43330] Nucleotide sequence of GAM3027 precursor RNA, designated SEQ-ID: 8, and a schematic representation of a predicted secondary folding of GAM3027 folded precursor RNA are further described with reference to Table 2, hereby incorporated by reference.

[43331] An enzyme complex designated DICER COMPLEX, `dices` the GAM3027 folded precursor RNA into GAM3027 RNA, herein designated GAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short

~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy Group: A) nucleotide sequence of GAM3027 RNA is designated SEQ ID:242, and is provided hereinbelow with references to the sequence listing part and Table 3, hereby incorporated by reference.

[43332] GAM3027 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM3027 target RNA, herein designated GAM TARGET RNA. GAM3027 target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[43333] GAM3027 RNA, herein designated GAM RNA, binds complementarily to one or more target binding sites located in untranslated regions of GAM3027 target RNA, herein designated GAM TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of GAM3027 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the target binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING

SITE II and BINDING SITE III respectively. It is appreciated that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limiting GAM3027 RNA may have a different number of target binding sites in untranslated regions of a GAM3027 target RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3`UTR region, this is meant as an example only these target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[43334] The complementary binding of GAM3027 RNA, herein designated GAM RNA, to target binding sites on GAM3027 target RNA, herein designated GAM TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM3027 target RNA into GAM3027 target protein, herein designated GAM TARGET PROTEIN. GAM target protein is therefore outlined by a broken line.

[43335] It is appreciated that GAM3027 target gene, herein designated TARGET GENE, in fact represents a plurality of GAM3027 target genes. The mRNA of each one of this plurality of GAM3027 target genes comprises one or more target binding sites, each having a nucleotide sequence which is at least partly complementary to GAM3027 RNA,

herein designated GAM RNA, and which when bound by GAM3027 RNA causes inhibition of translation of respective one or more GAM3027 target proteins.

[43336] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 8 with specific reference to translational inhibition exerted by GAM3027 gene, herein designated GAM GENE, on one or more GAM3027 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., Perspective: Glimpses of a tiny RNA world, Science 294,779 (2001)).

[43337] It is appreciated that specific functions and accordingly utilities of GAM3027 correlate with, and may be deduced from, the identity of the target genes which GAM3027 binds and inhibits, and the function of these target genes,

as elaborated hereinbelow.

[43338]

[43339]

[43340] (Accession NP_444285.1) is a GAM3027 target gene, herein designated TARGET GENE. BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BINDING SITE, designated SEQ ID:16500, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43341] A function of GAM3027 is therefore inhibition of (Accession NP_444285.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with .

[43342] Absent in melanoma 1-like (AIM1L, Accession NP_060447.1) is another GAM3027 target gene, herein designated TARGET GENE. AIM1L BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by AIM1L, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AIM1L BINDING SITE, designated SEQ ID:7873, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43343] Another function of GAM3027 is therefore inhibition of Absent in melanoma 1-like (AIM1L, Accession NP_060447.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AIM1L.

[43344] Btb and cnc homology 1, basic leucine zipper transcription factor 2 (BACH2, Accession NP_068585.1) is another GAM3027 target gene, herein designated TARGET GENE. BACH2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BACH2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BACH2 BINDING SITE, designated SEQ ID:1058, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43345] Another function of GAM3027 is therefore inhibition of

Btb and cnc homology 1, basic leucine zipper transcription factor 2 (BACH2, Accession NP_068585.1), a gene which acts as repressor or activator, binds to maf recognition elements and therefore may be associated with Non-hodgkin lymphoma. Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of Non-hodgkin lymphoma, and of other diseases and clinical conditions associated with BACH2.

[43346] The function of BACH2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.1.C14orf116 (Accession NP_061059.1) is another GAM3027 target gene, herein designated TARGET GENE. C14orf116 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C14orf116, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C14orf116 BINDING SITE, designated SEQ ID:9141, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43347] Another function of GAM3027 is therefore inhibition of

C14orf116 (Accession NP_061059.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C14orf116.

[43348] C5orf13 (Accession NP_004763.1) is another GAM3027 target gene, herein designated TARGET GENE. C5orf13 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C5orf13, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C5orf13 BINDING SITE, designated SEQ ID:11415, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43349] Another function of GAM3027 is therefore inhibition of C5orf13 (Accession NP_004763.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C5orf13.

[43350] Chromosome 5 open reading frame 5 (C5orf5, Accession NP_057687.1) is another GAM3027 target gene, herein designated TARGET GENE. C5orf5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA

encoded by C5orf5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C5orf5 BINDING SITE, designated SEQ ID:11857, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43351] Another function of GAM3027 is therefore inhibition of Chromosome 5 open reading frame 5 (C5orf5, Accession NP_057687.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C5orf5.

[43352] Chemokine (c-c motif) receptor-like 1 (CCRL1, Accession NP_848540.1) is another GAM3027 target gene, herein designated TARGET GENE. CCRL1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CCRL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCRL1 BINDING SITE, designated SEQ ID:11537, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43353] Another function of GAM3027 is therefore inhibition of Chemokine (c-c motif) receptor-like 1 (CCRL1, Accession NP_848540.1), a gene which is a G protein- coupled receptor that binds chemokines of the CC subfamily, especially MCP- 4, ELC (SCYA19) and TECK (SCYA25). Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCRL1.

[43354] The function of CCRL1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM94.1.Collagen, type iv, alpha 5 (alport syndrome) (COL4A5, Accession NP_203700.1) is another GAM3027 target gene, herein designated TARGET GENE. COL4A5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by COL4A5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COL4A5 BINDING SITE, designated SEQ ID:18409, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43355] Another function of GAM3027 is therefore inhibition of Collagen, type iv, alpha 5 (alport syndrome) (COL4A5, Accession NP_203700.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COL4A5.

[43356] Collagen, type iv, alpha 5 (alport syndrome) (COL4A5, Accession NP_000486.1) is another GAM3027 target gene, herein designated TARGET GENE. COL4A5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by COL4A5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COL4A5 BINDING SITE, designated SEQ ID:18409, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43357] Another function of GAM3027 is therefore inhibition of Collagen, type iv, alpha 5 (alport syndrome) (COL4A5, Accession NP_000486.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COL4A5.

[43358] Collagen, type iv, alpha 5 (alport syndrome) (COL4A5, Accession NP_203699.1) is another GAM3027 target gene,

herein designated TARGET GENE. COL4A5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by COL4A5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COL4A5 BINDING SITE, designated SEQ ID:18409, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43359] Another function of GAM3027 is therefore inhibition of Collagen, type iv, alpha 5 (alport syndrome) (COL4A5, Accession NP_203699.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COL4A5.

[43360] Collagen, type v, alpha 2 (COL5A2, Accession NP_000384.1) is another GAM3027 target gene, herein designated TARGET GENE. COL5A2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by COL5A2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COL5A2 BINDING SITE, designated SEQ ID:17367, to the nucleotide se-

quence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43361] Another function of GAM3027 is therefore inhibition of Collagen, type v, alpha 2 (COL5A2, Accession NP_000384.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COL5A2.

[43362] Collagen, type vi, alpha 3 (COL6A3, Accession NP_476507.1) is another GAM3027 target gene, herein designated TARGET GENE. COL6A3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by COL6A3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COL6A3 BINDING SITE, designated SEQ ID:16712, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43363] Another function of GAM3027 is therefore inhibition of Collagen, type vi, alpha 3 (COL6A3, Accession NP_476507.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COL6A3.

[43364] Collagen, type vi, alpha 3 (COL6A3, Accession NP_476505.1) is another GAM3027 target gene, herein designated TARGET GENE. COL6A3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by COL6A3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COL6A3 BINDING SITE, designated SEQ ID:16712, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43365] Another function of GAM3027 is therefore inhibition of Collagen, type vi, alpha 3 (COL6A3, Accession NP_476505.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COL6A3.

[43366] Collagen, type vi, alpha 3 (COL6A3, Accession NP_004360.1) is another GAM3027 target gene, herein designated TARGET GENE. COL6A3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by COL6A3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of COL6A3 BINDING SITE, designated SEQ ID:16712, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43367] Another function of GAM3027 is therefore inhibition of Collagen, type vi, alpha 3 (COL6A3, Accession NP_004360.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COL6A3.

[43368] Collagen, type vi, alpha 3 (COL6A3, Accession NP_476506.1) is another GAM3027 target gene, herein designated TARGET GENE. COL6A3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by COL6A3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COL6A3 BINDING SITE, designated SEQ ID:16712, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43369] Another function of GAM3027 is therefore inhibition of Collagen, type vi, alpha 3 (COL6A3, Accession NP_476506.1) . Accordingly, utilities of GAM3027 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with COL6A3.

[43370] Collagen, type vi, alpha 3 (COL6A3, Accession NP_476508.1) is another GAM3027 target gene, herein designated TARGET GENE. COL6A3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by COL6A3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COL6A3 BINDING SITE, designated SEQ ID:16712, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43371] Another function of GAM3027 is therefore inhibition of Collagen, type vi, alpha 3 (COL6A3, Accession NP_476508.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COL6A3.

[43372] Chondroitin sulfate proteoglycan 4 (melanoma-associated) (CSPG4, Accession NP_001888.1) is another GAM3027 target gene, herein designated TARGET GENE. CSPG4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

CSPG4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CSPG4 BINDING SITE, designated SEQ ID:1254, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43373] Another function of GAM3027 is therefore inhibition of Chondroitin sulfate proteoglycan 4 (melanoma-associated) (CSPG4, Accession NP_001888.1), a gene which plays a role in stabilizing cell- substratum interactions. and therefore may be associated with Childhood acute lymphoblastic leukemias. Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of Childhood acute lymphoblastic leukemias, and of other diseases and clinical conditions associated with CSPG4.

[43374] The function of CSPG4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM579.1.CYCS (Accession NP_061820.1) is another GAM3027 target gene, herein designated TARGET GENE. CYCS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CYCS, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYCS BINDING SITE, designated SEQ ID:1967, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43375] Another function of GAM3027 is therefore inhibition of CYCS (Accession NP_061820.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYCS.

[43376] Dead/h (asp-glu-ala-asp/his) box polypeptide 4 (DDX4, Accession NP_077726.1) is another GAM3027 target gene, herein designated TARGET GENE. DDX4 BINDING SITE1 and DDX4 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by DDX4, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DDX4 BINDING SITE1 and DDX4 BINDING SITE2, designated SEQ ID:4569 and SEQ ID:14219 respectively, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43377] Another function of GAM3027 is therefore inhibition of Dead/h (asp-glu-ala-asp/his) box polypeptide 4 (DDX4, Accession NP_077726.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DDX4.

[43378] DKFZp434O0515 (Accession NP_835224.1) is another GAM3027 target gene, herein designated TARGET GENE. DKFZp434O0515 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp434O0515, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp434O0515 BINDING SITE, designated SEQ ID:2186, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43379] Another function of GAM3027 is therefore inhibition of DKFZp434O0515 (Accession NP_835224.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp434O0515.

[43380] EBRP (Accession NP_115954.1) is another GAM3027 target gene, herein designated TARGET GENE. EBRP BINDING SITE

is a target binding site found in the 3` untranslated region of mRNA encoded by EBRP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EBRP BINDING SITE, designated SEQ ID:13938, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43381] Another function of GAM3027 is therefore inhibition of EBRP (Accession NP_115954.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EBRP.

[43382] ESDN (Accession NP_563615.2) is another GAM3027 target gene, herein designated TARGET GENE. ESDN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ESDN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ESDN BINDING SITE, designated SEQ ID:700, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43383] Another function of GAM3027 is therefore inhibition of

ESDN (Accession NP_563615.2) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ESDN.

[43384] Endothelial cell-specific molecule 1 (ESM1, Accession NP_008967.1) is another GAM3027 target gene, herein designated TARGET GENE. ESM1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ESM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ESM1 BINDING SITE, designated SEQ ID:11981, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43385] Another function of GAM3027 is therefore inhibition of Endothelial cell-specific molecule 1 (ESM1, Accession NP_008967.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ESM1.

[43386] Fgd1 family, member 2 (FGD2, Accession NP_775829.1) is another GAM3027 target gene, herein designated TARGET GENE. FGD2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FGD2,

corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGD2 BINDING SITE, designated SEQ ID:8607, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43387] Another function of GAM3027 is therefore inhibition of Fgd1 family, member 2 (FGD2, Accession NP_775829.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGD2.

[43388] FLJ10251 (Accession NP_060509.1) is another GAM3027 target gene, herein designated TARGET GENE. FLJ10251 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ10251, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10251 BINDING SITE, designated SEQ ID:11858, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43389] Another function of GAM3027 is therefore inhibition of FLJ10251 (Accession NP_060509.1) . Accordingly, utilities

of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10251.

[43390] FLJ10292 (Accession NP_060518.1) is another GAM3027 target gene, herein designated TARGET GENE. FLJ10292 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10292, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10292 BINDING SITE, designated SEQ ID:3351, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43391] Another function of GAM3027 is therefore inhibition of FLJ10292 (Accession NP_060518.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10292.

[43392] FLJ10404 (Accession NP_061930.1) is another GAM3027 target gene, herein designated TARGET GENE. FLJ10404 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10404, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10404 BINDING SITE, designated SEQ ID:2867, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43393] Another function of GAM3027 is therefore inhibition of FLJ10404 (Accession NP_061930.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10404.

[43394] FLJ25555 (Accession NP_689558.2) is another GAM3027 target gene, herein designated TARGET GENE. FLJ25555 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ25555, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ25555 BINDING SITE, designated SEQ ID:14472, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43395] Another function of GAM3027 is therefore inhibition of FLJ25555 (Accession NP_689558.2) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ25555.

[43396] FLJ32468 (Accession NP_660090.1) is another GAM3027 target gene, herein designated TARGET GENE. FLJ32468 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32468, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32468 BINDING SITE, designated SEQ ID:5290, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43397] Another function of GAM3027 is therefore inhibition of FLJ32468 (Accession NP_660090.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32468.

[43398] FLJ34922 (Accession NP_689483.1) is another GAM3027 target gene, herein designated TARGET GENE. FLJ34922 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ34922, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ34922 BINDING SITE, designated SEQ ID:13523, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43399] Another function of GAM3027 is therefore inhibition of FLJ34922 (Accession NP_689483.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ34922.

[43400] FLJ36000 (Accession NP_787101.1) is another GAM3027 target gene, herein designated TARGET GENE. FLJ36000 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ36000, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ36000 BINDING SITE, designated SEQ ID:11041, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43401] Another function of GAM3027 is therefore inhibition of FLJ36000 (Accession NP_787101.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ36000.

[43402] FLJ36331 (Accession XP_211925.1) is another GAM3027 target gene, herein designated TARGET GENE. FLJ36331 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ36331, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ36331 BINDING SITE, designated SEQ ID:13204, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43403] Another function of GAM3027 is therefore inhibition of FLJ36331 (Accession XP_211925.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ36331.

[43404] Udp-n-acetyl-alpha-d-galactosamine:polypeptide n-acetylgalactosaminyltransferase 8 (galnac-t8) (GALNT8, Accession NP_059113.1) is another GAM3027 target gene, herein designated TARGET GENE. GALNT8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GALNT8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GALNT8 BINDING SITE, designated SEQ ID:10446, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43405] Another function of GAM3027 is therefore inhibition of Udp-n-acetyl-alpha-d-galactosamine:polypeptide n-acetylgalactosaminyltransferase 8 (galnac-t8) (GALNT8, Accession NP_059113.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GALNT8.

[43406] HBP1 (Accession NP_036389.2) is another GAM3027 target gene, herein designated TARGET GENE. HBP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HBP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HBP1 BINDING SITE, designated SEQ ID:16151, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43407] Another function of GAM3027 is therefore inhibition of HBP1 (Accession NP_036389.2) . Accordingly, utilities of

GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HBP1.

[43408] Hepatic leukemia factor (HLF, Accession NP_002117.1) is another GAM3027 target gene, herein designated TARGET GENE. HLF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HLF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HLF BINDING SITE, designated SEQ ID:18455, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43409] Another function of GAM3027 is therefore inhibition of Hepatic leukemia factor (HLF, Accession NP_002117.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HLF.

[43410] Integrin, alpha d (ITGAD, Accession XP_113880.1) is another GAM3027 target gene, herein designated TARGET GENE. ITGAD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ITGAD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4

illustrates the complementarity of the nucleotide sequences of ITGAD BINDING SITE, designated SEQ ID:7734, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43411] Another function of GAM3027 is therefore inhibition of Integrin, alpha d (ITGAD, Accession XP_113880.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ITGAD.

[43412] Inositol 1,4,5-triphosphate receptor, type 1 (ITPR1, Accession NP_002213.1) is another GAM3027 target gene, herein designated TARGET GENE. ITPR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ITPR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ITPR1 BINDING SITE, designated SEQ ID:623, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43413] Another function of GAM3027 is therefore inhibition of Inositol 1,4,5-triphosphate receptor, type 1 (ITPR1, Accession NP_002213.1), a gene which couples cell mem-

brane receptors to Ca2+ signal transduction pathways. and therefore may be associated with Ataxia and epileptic seizures. Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of Ataxia and epileptic seizures, and of other diseases and clinical conditions associated with ITPR1.

[43414] The function of ITPR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM404.2.Potassium voltage-gated channel, subfamily h (eag-related), member 7 (KCNH7, Accession NP_775185.1) is another GAM3027 target gene, herein designated TARGET GENE. KCNH7 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by KCNH7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNH7 BINDING SITE, designated SEQ ID:11768, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43415] Another function of GAM3027 is therefore inhibition of Potassium voltage-gated channel, subfamily h

(eag-related), member 7 (KCNH7, Accession NP_775185.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNH7.

[43416] Potassium voltage-gated channel, subfamily h (eag-related), member 7 (KCNH7, Accession NP_150375.2) is another GAM3027 target gene, herein designated TARGET GENE. KCNH7 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by KCNH7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNH7 BINDING SITE, designated SEQ ID:11768, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43417] Another function of GAM3027 is therefore inhibition of Potassium voltage-gated channel, subfamily h (eag-related), member 7 (KCNH7, Accession NP_150375.2) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNH7.

[43418] KIAA0125 (Accession NP_055607.1) is another GAM3027

target gene, herein designated TARGET GENE. KIAA0125 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0125, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0125 BINDING SITE, designated SEQ ID:16707, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43419] Another function of GAM3027 is therefore inhibition of KIAA0125 (Accession NP_055607.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0125.

[43420] KIAA0256 (Accession XP_034905.1) is another GAM3027 target gene, herein designated TARGET GENE. KIAA0256 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0256, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0256 BINDING SITE, designated SEQ ID:16077, to the nucleotide sequence of GAM3027 RNA, herein designated

GAM RNA, also designated SEQ ID:242.

[43421] Another function of GAM3027 is therefore inhibition of KIAA0256 (Accession XP_034905.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0256.

[43422] KIAA1399 (Accession XP_046685.4) is another GAM3027 target gene, herein designated TARGET GENE. KIAA1399 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1399, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1399 BINDING SITE, designated SEQ ID:18563, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43423] Another function of GAM3027 is therefore inhibition of KIAA1399 (Accession XP_046685.4) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1399.

[43424] KIAA1666 (Accession XP_036936.1) is another GAM3027 target gene, herein designated TARGET GENE. KIAA1666

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1666, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1666 BINDING SITE, designated SEQ ID:2583, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43425] Another function of GAM3027 is therefore inhibition of KIAA1666 (Accession XP_036936.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1666.

[43426] KIAA2022 (Accession XP_291326.1) is another GAM3027 target gene, herein designated TARGET GENE. KIAA2022 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA2022, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA2022 BINDING SITE, designated SEQ ID:14473, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43427] Another function of GAM3027 is therefore inhibition of KIAA2022 (Accession XP_291326.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA2022.

[43428] Kruppel-like factor 12 (KLF12, Accession NP_009180.3) is another GAM3027 target gene, herein designated TARGET GENE. KLF12 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by KLF12, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KLF12 BINDING SITE, designated SEQ ID:19711, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43429] Another function of GAM3027 is therefore inhibition of Kruppel-like factor 12 (KLF12, Accession NP_009180.3) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KLF12.

[43430] Leucine proline-enriched proteoglycan (leprecan) 1 (LEPRE1, Accession NP_071751.2) is another GAM3027

target gene, herein designated TARGET GENE. LEPRE1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LEPRE1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LEPRE1 BINDING SITE, designated SEQ ID:12458, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43431] Another function of GAM3027 is therefore inhibition of Leucine proline-enriched proteoglycan (leprecan) 1 (LEPRE1, Accession NP_071751.2) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LEPRE1.

[43432] LOC150221 (Accession XP_036942.1) is another GAM3027 target gene, herein designated TARGET GENE. LOC150221 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC150221, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150221 BINDING SITE, designated SEQ ID:2583, to the nucleotide sequence of

GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43433] Another function of GAM3027 is therefore inhibition of LOC150221 (Accession XP_036942.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150221.

[43434] LOC151720 (Accession XP_087279.6) is another GAM3027 target gene, herein designated TARGET GENE. LOC151720 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC151720, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151720 BINDING SITE, designated SEQ ID:12738, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43435] Another function of GAM3027 is therefore inhibition of LOC151720 (Accession XP_087279.6) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151720.

[43436] LOC159053 (Accession XP_099021.1) is another GAM3027 target gene, herein designated TARGET GENE. LOC159053 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC159053, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC159053 BINDING SITE, designated SEQ ID:16816, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43437] Another function of GAM3027 is therefore inhibition of LOC159053 (Accession XP_099021.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC159053.

[43438] LOC222001 (Accession XP_167489.1) is another GAM3027 target gene, herein designated TARGET GENE. LOC222001 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC222001, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC222001 BINDING SITE, designated SEQ ID:17330, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43439] Another function of GAM3027 is therefore inhibition of LOC222001 (Accession XP_167489.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC222001.

[43440] LOC283120 (Accession XP_208516.1) is another GAM3027 target gene, herein designated TARGET GENE. LOC283120 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283120, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283120 BINDING SITE, designated SEQ ID:5389, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43441] Another function of GAM3027 is therefore inhibition of LOC283120 (Accession XP_208516.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC283120.

[43442] LOC283368 (Accession XP_208080.1) is another GAM3027 target gene, herein designated TARGET GENE. LOC283368 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283368, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283368 BINDING SITE, designated SEQ ID:8708, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43443] Another function of GAM3027 is therefore inhibition of LOC283368 (Accession XP_208080.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283368.

[43444] LOC283528 (Accession XP_208708.1) is another GAM3027 target gene, herein designated TARGET GENE. LOC283528 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283528, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283528 BINDING SITE, designated SEQ ID:6585, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43445] Another function of GAM3027 is therefore inhibition of LOC283528 (Accession XP_208708.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283528.

[43446] LOC283570 (Accession XP_211118.1) is another GAM3027 target gene, herein designated TARGET GENE. LOC283570 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283570, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283570 BINDING SITE, designated SEQ ID:4895, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43447] Another function of GAM3027 is therefore inhibition of

LOC283570 (Accession XP_211118.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283570.

[43448] LOC284124 (Accession XP_294862.1) is another GAM3027 target gene, herein designated TARGET GENE. LOC284124 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284124, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284124 BINDING SITE, designated SEQ ID:11041, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43449] Another function of GAM3027 is therefore inhibition of LOC284124 (Accession XP_294862.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284124.

[43450] LOC284375 (Accession XP_209154.1) is another GAM3027 target gene, herein designated TARGET GENE. LOC284375 BINDING SITE is a target binding site found in

the 3` untranslated region of mRNA encoded by LOC284375, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284375 BINDING SITE, designated SEQ ID:19882, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43451] Another function of GAM3027 is therefore inhibition of LOC284375 (Accession XP_209154.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284375.

[43452] LOC284463 (Accession XP_210788.1) is another GAM3027 target gene, herein designated TARGET GENE. LOC284463 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284463, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284463 BINDING SITE, designated SEQ ID:8159, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:242.

[43453] Another function of GAM3027 is therefore inhibition of LOC284463 (Accession XP_210788.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284463.

[43454] LOC284709 (Accession XP_209331.1) is another GAM3027 target gene, herein designated TARGET GENE. LOC284709 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284709, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284709 BINDING SITE, designated SEQ ID:10590, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43455] Another function of GAM3027 is therefore inhibition of LOC284709 (Accession XP_209331.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284709.

[43456] LOC285167 (Accession XP_211790.1) is another

GAM3027 target gene, herein designated TARGET GENE. LOC285167 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285167, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285167 BINDING SITE, designated SEQ ID:8965, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43457] Another function of GAM3027 is therefore inhibition of LOC285167 (Accession XP_211790.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285167.

[43458] LOC285695 (Accession XP_209722.1) is another GAM3027 target gene, herein designated TARGET GENE. LOC285695 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285695, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285695 BINDING SITE, desig-

nated SEQ ID:9924, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43459] Another function of GAM3027 is therefore inhibition of LOC285695 (Accession XP_209722.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285695.

[43460] LOC285827 (Accession XP_212604.1) is another GAM3027 target gene, herein designated TARGET GENE. LOC285827 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by LOC285827, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285827 BINDING SITE, designated SEQ ID:1968, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43461] Another function of GAM3027 is therefore inhibition of LOC285827 (Accession XP_212604.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC285827.

[43462] LOC285827 (Accession XP_212038.1) is another GAM3027 target gene, herein designated TARGET GENE. LOC285827 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by LOC285827, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285827 BINDING SITE, designated SEQ ID:1968, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43463] Another function of GAM3027 is therefore inhibition of LOC285827 (Accession XP_212038.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285827.

[43464] LOC285827 (Accession XP_212645.1) is another GAM3027 target gene, herein designated TARGET GENE. LOC285827 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by LOC285827, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285827 BINDING SITE, designated SEQ ID:1968, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43465] Another function of GAM3027 is therefore inhibition of LOC285827 (Accession XP_212645.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285827.

[43466] LOC285939 (Accession XP_208364.1) is another GAM3027 target gene, herein designated TARGET GENE. LOC285939 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285939, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285939 BINDING SITE, designated SEQ ID:11415, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43467] Another function of GAM3027 is therefore inhibition of LOC285939 (Accession XP_208364.1) . Accordingly, utili-

ties of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285939.

[43468] LOC286173 (Accession XP_209928.1) is another GAM3027 target gene, herein designated TARGET GENE. LOC286173 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286173, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286173 BINDING SITE, designated SEQ ID:11415, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43469] Another function of GAM3027 is therefore inhibition of LOC286173 (Accession XP_209928.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286173.

[43470] LOC338921 (Accession XP_290624.1) is another GAM3027 target gene, herein designated TARGET GENE. LOC338921 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

LOC338921, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338921 BINDING SITE, designated SEQ ID:19734, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43471] Another function of GAM3027 is therefore inhibition of LOC338921 (Accession XP_290624.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338921.

[43472] LOC339856 (Accession XP_295087.1) is another GAM3027 target gene, herein designated TARGET GENE. LOC339856 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339856, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339856 BINDING SITE, designated SEQ ID:15901, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43473] Another function of GAM3027 is therefore inhibition of LOC339856 (Accession XP_295087.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339856.

[43474] LOC340362 (Accession XP_295225.1) is another GAM3027 target gene, herein designated TARGET GENE. LOC340362 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC340362, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340362 BINDING SITE, designated SEQ ID:1433, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43475] Another function of GAM3027 is therefore inhibition of LOC340362 (Accession XP_295225.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340362.

[43476] LOC340428 (Accession XP_290420.1) is another GAM3027 target gene, herein designated TARGET GENE.

LOC340428 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340428, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340428 BINDING SITE, designated SEQ ID:7731, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43477] Another function of GAM3027 is therefore inhibition of LOC340428 (Accession XP_290420.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340428.

[43478] LOC340542 (Accession XP_291335.1) is another GAM3027 target gene, herein designated TARGET GENE. LOC340542 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC340542, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340542 BINDING SITE, designated SEQ ID:16315, to the nucleotide sequence of

GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43479] Another function of GAM3027 is therefore inhibition of LOC340542 (Accession XP_291335.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340542.

[43480] LOC348393 (Accession XP_302741.1) is another GAM3027 target gene, herein designated TARGET GENE. LOC348393 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348393, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348393 BINDING SITE, designated SEQ ID:1132, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43481] Another function of GAM3027 is therefore inhibition of LOC348393 (Accession XP_302741.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348393.

[43482] LOC348532 (Accession XP_302818.1) is another GAM3027 target gene, herein designated TARGET GENE. LOC348532 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348532, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348532 BINDING SITE, designated SEQ ID:1132, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43483] Another function of GAM3027 is therefore inhibition of LOC348532 (Accession XP_302818.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348532.

[43484] LOC348572 (Accession XP_290964.1) is another GAM3027 target gene, herein designated TARGET GENE. LOC348572 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348572, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC348572 BINDING SITE, designated SEQ ID:17835, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43485] Another function of GAM3027 is therefore inhibition of LOC348572 (Accession XP_290964.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348572.

[43486] LOC348601 (Accession XP_300791.1) is another GAM3027 target gene, herein designated TARGET GENE. LOC348601 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348601, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348601 BINDING SITE, designated SEQ ID:2583, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43487] Another function of GAM3027 is therefore inhibition of LOC348601 (Accession XP_300791.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC348601.

[43488] LOC349667 (Accession XP_303448.1) is another GAM3027 target gene, herein designated TARGET GENE. LOC349667 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC349667, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349667 BINDING SITE, designated SEQ ID:9490, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43489] Another function of GAM3027 is therefore inhibition of LOC349667 (Accession XP_303448.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349667.

[43490] Mesoderm specific transcript homolog (mouse) (MEST, Accession NP_803491.1) is another GAM3027 target gene, herein designated TARGET GENE. MEST BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MEST, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MEST BINDING SITE, designated SEQ ID:8219, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43491] Another function of GAM3027 is therefore inhibition of Mesoderm specific transcript homolog (mouse) (MEST, Accession NP_803491.1), a gene which appears to be required for the appropriate immediate response of females to their pups. Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MEST.

[43492] The function of MEST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM291.1.Mesoderm specific transcript homolog (mouse) (MEST, Accession NP_002393.2) is another GAM3027 target gene, herein designated TARGET GENE. MEST BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MEST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MEST BINDING SITE, designated SEQ ID:8219, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43493] Another function of GAM3027 is therefore inhibition of Mesoderm specific transcript homolog (mouse) (MEST, Accession NP_002393.2), a gene which appears to be required for the appropriate immediate response of females to their pups. Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MEST.

[43494] The function of MEST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM291.1.Mesoderm specific transcript homolog (mouse) (MEST, Accession NP_803490.1) is another GAM3027 target gene, herein designated TARGET GENE. MEST BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MEST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of MEST BINDING SITE, designated SEQ ID:8219, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43495] Another function of GAM3027 is therefore inhibition of Mesoderm specific transcript homolog (mouse) (MEST, Accession NP_803490.1), a gene which appears to be required for the appropriate immediate response of females to their pups. Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MEST.

[43496] The function of MEST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM291.1.Methyltransferase-like 1 (METTL1, Accession NP_075421.1) is another GAM3027 target gene, herein designated TARGET GENE. METTL1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by METTL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of METTL1 BINDING SITE, designated SEQ ID:12414, to the

nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43497] Another function of GAM3027 is therefore inhibition of Methyltransferase-like 1 (METTL1, Accession NP_075421.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with METTL1.

[43498] MGC22014 (Accession XP_035307.1) is another GAM3027 target gene, herein designated TARGET GENE. MGC22014 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC22014, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC22014 BINDING SITE, designated SEQ ID:4508, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43499] Another function of GAM3027 is therefore inhibition of MGC22014 (Accession XP_035307.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC22014.

[43500] MGC2705 (Accession NP_116090.2) is another GAM3027

target gene, herein designated TARGET GENE. MGC2705 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC2705, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC2705 BINDING SITE, designated SEQ ID:1363, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43501] Another function of GAM3027 is therefore inhibition of MGC2705 (Accession NP_116090.2) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC2705.

[43502] MORF4 (Accession XP_165470.1) is another GAM3027 target gene, herein designated TARGET GENE. MORF4 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MORF4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MORF4 BINDING SITE, designated SEQ ID:7924, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA,

also designated SEQ ID:242.

[43503] Another function of GAM3027 is therefore inhibition of MORF4 (Accession XP_165470.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MORF4.

[43504] Nuclear autoantigenic sperm protein (histone-binding) (NASP, Accession NP_751896.1) is another GAM3027 target gene, herein designated TARGET GENE. NASP BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by NASP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NASP BINDING SITE, designated SEQ ID:16483, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43505] Another function of GAM3027 is therefore inhibition of Nuclear autoantigenic sperm protein (histone-binding) (NASP, Accession NP_751896.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NASP.

[43506] Nuclear autoantigenic sperm protein (histone-binding) (NASP, Accession NP_002473.2) is another GAM3027 tar-

get gene, herein designated TARGET GENE. NASP BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by NASP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NASP BINDING SITE, designated SEQ ID:16483, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43507] Another function of GAM3027 is therefore inhibition of Nuclear autoantigenic sperm protein (histone-binding) (NASP, Accession NP_002473.2) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NASP.

[43508] Nuclear autoantigenic sperm protein (histone-binding) (NASP, Accession NP_689511.2) is another GAM3027 target gene, herein designated TARGET GENE. NASP BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by NASP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NASP BINDING SITE, designated SEQ ID:16483,

to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43509] Another function of GAM3027 is therefore inhibition of Nuclear autoantigenic sperm protein (histone-binding) (NASP, Accession NP_689511.2) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NASP.

[43510] Neuron navigator 3 (NAV3, Accession NP_055718.2) is another GAM3027 target gene, herein designated TARGET GENE. NAV3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NAV3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NAV3 BINDING SITE, designated SEQ ID:9220, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43511] Another function of GAM3027 is therefore inhibition of Neuron navigator 3 (NAV3, Accession NP_055718.2) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NAV3.

[43512] Nuclear receptor coactivator 2 (NCOA2, Accession

NP_006531.1) is another GAM3027 target gene, herein designated TARGET GENE. NCOA2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by NCOA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NCOA2 BINDING SITE, designated SEQ ID:4666, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43513] Another function of GAM3027 is therefore inhibition of Nuclear receptor coactivator 2 (NCOA2, Accession NP_006531.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NCOA2.

[43514] Nima (never in mitosis gene a)-related kinase 2 (NEK2, Accession NP_002488.1) is another GAM3027 target gene, herein designated TARGET GENE. NEK2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NEK2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NEK2 BINDING SITE,

designated SEQ ID:18583, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43515] Another function of GAM3027 is therefore inhibition of Nima (never in mitosis gene a)-related kinase 2 (NEK2, Accession NP_002488.1), a gene which is involved in mitotic regulation. Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NEK2.

[43516] The function of NEK2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM473.1.Polyhomeotic-like 1 (drosophila) (PHC1, Accession NP_004417.1) is another GAM3027 target gene, herein designated TARGET GENE. PHC1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PHC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PHC1 BINDING SITE, designated SEQ ID:8708, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43517] Another function of GAM3027 is therefore inhibition of Polyhomeotic-like 1 (drosophila) (PHC1, Accession NP_004417.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PHC1.

[43518] Paraneoplastic antigen ma2 (PNMA2, Accession NP_009188.1) is another GAM3027 target gene, herein designated TARGET GENE. PNMA2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PNMA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PNMA2 BINDING SITE, designated SEQ ID:16185, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43519] Another function of GAM3027 is therefore inhibition of Paraneoplastic antigen ma2 (PNMA2, Accession NP_009188.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PNMA2.

[43520] Protein phosphatase 2, regulatory subunit b (b56), gamma isoform (PPP2R5C, Accession NP_848701.1) is another

GAM3027 target gene, herein designated TARGET GENE. PPP2R5C BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PPP2R5C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPP2R5C BINDING SITE, designated SEQ ID:14122, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43521] Another function of GAM3027 is therefore inhibition of Protein phosphatase 2, regulatory subunit b (b56), gamma isoform (PPP2R5C, Accession NP_848701.1), a gene which is a regulatory subunit of protein phosphatase 2A. Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPP2R5C.

[43522] The function of PPP2R5C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.1.Protein phosphatase 2, regulatory subunit b (b56), gamma isoform (PPP2R5C, Accession NP_002710.2) is another GAM3027 target gene, herein designated TAR-

GET GENE. PPP2R5C BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PPP2R5C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPP2R5C BINDING SITE, designated SEQ ID:14122, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43523] Another function of GAM3027 is therefore inhibition of Protein phosphatase 2, regulatory subunit b (b56), gamma isoform (PPP2R5C, Accession NP_002710.2), a gene which is a regulatory subunit of protein phosphatase 2A. Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPP2R5C.

[43524] The function of PPP2R5C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.1.PRO0132 (Accession NP_054835.1) is another GAM3027 target gene, herein designated TARGET GENE. PRO0132 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by

PRO0132, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO0132 BINDING SITE, designated SEQ ID:18429, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43525] Another function of GAM3027 is therefore inhibition of PRO0132 (Accession NP_054835.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO0132.

[43526] PRO2964 (Accession NP_061017.1) is another GAM3027 target gene, herein designated TARGET GENE. PRO2964 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PRO2964, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO2964 BINDING SITE, designated SEQ ID:7172, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43527] Another function of GAM3027 is therefore inhibition of

PRO2964 (Accession NP_061017.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO2964.

[43528] Rab30, member ras oncogene family (RAB30, Accession NP_055303.2) is another GAM3027 target gene, herein designated TARGET GENE. RAB30 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAB30, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAB30 BINDING SITE, designated SEQ ID:1946, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43529] Another function of GAM3027 is therefore inhibition of Rab30, member ras oncogene family (RAB30, Accession NP_055303.2), a gene which is a GTP- binding protein. Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB30.

[43530] The function of RAB30 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM129.1.Regulatory factor x-associated protein (RFXAP, Accession NP_000529.1) is another GAM3027 target gene, herein designated TARGET GENE. RFXAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RFXAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RFXAP BINDING SITE, designated SEQ ID:11150, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43531] Another function of GAM3027 is therefore inhibition of Regulatory factor x-associated protein (RFXAP, Accession NP_000529.1), a gene which binds to the x- box of mhc ii promoters and is a transcriptional regulator. Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RFXAP.

[43532] The function of RFXAP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM40.2.Ribonuclease, rnase a family, k6 (RNASE6,

Accession NP_005606.1) is another GAM3027 target gene, herein designated TARGET GENE. RNASE6 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by RNASE6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RNASE6 BINDING SITE, designated SEQ ID:3045, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43533] Another function of GAM3027 is therefore inhibition of Ribonuclease, rnase a family, k6 (RNASE6, Accession NP_005606.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNASE6.

[43534] Ribonuclease l (2',5'-oligoisoadenylate synthetase-dependent) (RNASEL, Accession NP_066956.1) is another GAM3027 target gene, herein designated TARGET GENE. RNASEL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RNASEL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of RNASEL BINDING SITE, designated SEQ ID:12262, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43535] Another function of GAM3027 is therefore inhibition of Ribonuclease l (2',5'-oligoisoadenylate synthetase-dependent) (RNASEL, Accession NP_066956.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNASEL.

[43536] Rna guanylyltransferase and 5'-phosphatase (RNGTT, Accession NP_003791.1) is another GAM3027 target gene, herein designated TARGET GENE. RNGTT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RNGTT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RNGTT BINDING SITE, designated SEQ ID:16779, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43537] Another function of GAM3027 is therefore inhibition of Rna guanylyltransferase and 5'-phosphatase (RNGTT, Accession NP_003791.1), a gene which is an MRNA capping

enzyme; bifunctional enzyme containing both 5'- triphosphatase and mRNA guanylyltransferase activity. Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNGTT.

[43538] The function of RNGTT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM475.2.Solute carrier family 11 (proton-coupled divalent metal ion transporters), member 2 (SLC11A2, Accession NP_000608.1) is another GAM3027 target gene, herein designated TARGET GENE. SLC11A2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC11A2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC11A2 BINDING SITE, designated SEQ ID:10424, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43539] Another function of GAM3027 is therefore inhibition of Solute carrier family 11 (proton-coupled divalent metal ion transporters), member 2 (SLC11A2, Accession

NP_000608.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC11A2.

[43540] Solute carrier family 26, member 7 (SLC26A7, Accession NP_439897.1) is another GAM3027 target gene, herein designated TARGET GENE. SLC26A7 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SLC26A7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC26A7 BINDING SITE, designated SEQ ID:19030, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43541] Another function of GAM3027 is therefore inhibition of Solute carrier family 26, member 7 (SLC26A7, Accession NP_439897.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC26A7.

[43542] Solute carrier family 7 (cationic amino acid transporter, y+ system), member 6 (SLC7A6, Accession NP_003974.1) is another GAM3027 target gene, herein designated TARGET GENE. SLC7A6 BINDING SITE is a target binding site found

in the 3` untranslated region of mRNA encoded by SLC7A6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC7A6 BINDING SITE, designated SEQ ID:17897, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43543] Another function of GAM3027 is therefore inhibition of Solute carrier family 7 (cationic amino acid transporter, y+ system), member 6 (SLC7A6, Accession NP_003974.1), a gene which is involved in mediating amino acid transport. Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC7A6.

[43544] The function of SLC7A6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM74.1.SNURF-SNRPN (Accession XP_085186.4) is another GAM3027 target gene, herein designated TARGET GENE. SNURF-SNRPN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SNURF-SNRPN, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNURF-SNRPN BINDING SITE, designated SEQ ID:3268, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43545] Another function of GAM3027 is therefore inhibition of SNURF-SNRPN (Accession XP_085186.4) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNURF-SNRPN.

[43546] Synovial sarcoma translocation, chromosome 18 (SS18, Accession NP_005628.1) is another GAM3027 target gene, herein designated TARGET GENE. SS18 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SS18, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SS18 BINDING SITE, designated SEQ ID:9679, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43547] Another function of GAM3027 is therefore inhibition of

Synovial sarcoma translocation, chromosome 18 (SS18, Accession NP_005628.1), a gene which is a putative transcriptional activator. and therefore is associated with Human synovial sarcomas. Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of Human synovial sarcomas., and of other diseases and clinical conditions associated with SS18.

[43548] The function of SS18 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.T-cell leukemia/lymphoma 1a (TCL1A, Accession NP_068801.1) is another GAM3027 target gene, herein designated TARGET GENE. TCL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TCL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TCL1A BINDING SITE, designated SEQ ID:14577, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43549] Another function of GAM3027 is therefore inhibition of T-cell leukemia/lymphoma 1a (TCL1A, Accession

NP_068801.1) . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TCL1A.

[43550] Thiamin pyrophosphokinase 1 (TPK1, Accession NP_071890.2) is another GAM3027 target gene, herein designated TARGET GENE. TPK1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TPK1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TPK1 BINDING SITE, designated SEQ ID:3731, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43551] Another function of GAM3027 is therefore inhibition of Thiamin pyrophosphokinase 1 (TPK1, Accession NP_071890.2), a gene which catalyzes the conversion of thiamine, a form of vitamin B1, to thiamine pyrophosphate . Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TPK1.

[43552] The function of TPK1 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM1435.2.Tripartite motif-containing 9 (TRIM9, Accession NP_443210.1) is another GAM3027 target gene, herein designated TARGET GENE. TRIM9 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TRIM9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRIM9 BINDING SITE, designated SEQ ID:17715, to the nucleotide sequence of GAM3027 RNA, herein designated GAM RNA, also designated SEQ ID:242.

[43553] Another function of GAM3027 is therefore inhibition of Tripartite motif-containing 9 (TRIM9, Accession NP_443210.1), a gene which may function as a positive regulator for mannosylphosphate transferase and is required to mediate mannosylphosphate transfer in both the core and outer chain portions of n- linked. oligosaccharides. Accordingly, utilities of GAM3027 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRIM9.

[43554] The function of TRIM9 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM72.1.

[43555] Fig. 8 further provides a conceptual description of a novel bioinformatically detected of the present invention, referred to here as Genomic Address Messenger 3229 (GAM3229), which modulates expression of respective target genes thereof, the function and utility of which target genes is known in the art.

[43556] GAM3229 is a novel bioinformatically detected regulatory, non protein coding, micro RNA (miRNA) gene. The method by which GAM3229 was detected is described hereinabove with reference to Figs. 8-15.

[43557] GAM3229 gene, herein designated GAM GENE, and GAM3229 target gene, herein designated TARGET GENE, are human genes contained in the human genome.

[43558] GAM3229 gene encodes a GAM3229 precursor RNA, herein designated GAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, GAM3229 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of GAM3229 precursor RNA is designated SEQ ID:46, and is provided hereinbelow with reference to the sequence listing part.

[43559] GAM3229 precursor RNA folds onto itself, forming GAM3229 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[43560] GAM3229 precursor RNA folds onto itself, forming GAM3229 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[43561] Nucleotide sequence of GAM3229 precursor RNA, designated SEQ-ID: 46, and a schematic representation of a predicted secondary folding of GAM3229 folded precursor RNA are further described with reference to Table 2, hereby incorporated by reference.

[43562] An enzyme complex designated DICER COMPLEX, `dices` the GAM3229 folded precursor RNA into GAM3229 RNA, herein designated GAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy Group: C) nucleotide sequence of GAM3229 RNA is designated SEQ ID:221, and is provided hereinbelow with references to the sequence listing part and Table 3, hereby incorporated by reference.

[43563] GAM3229 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM3229 target RNA, herein designated GAM TARGET RNA. GAM3229 target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[43564] GAM3229 RNA, herein designated GAM RNA, binds complementarily to one or more target binding sites located in untranslated regions of GAM3229 target RNA, herein designated GAM TARGET RNA. This complementary binding is

due to the fact that the nucleotide sequence of GAM3229 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the target binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limiting GAM3229 RNA may have a different number of target binding sites in untranslated regions of a GAM3229 target RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3`UTR region, this is meant as an example only these target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[43565] The complementary binding of GAM3229 RNA, herein designated GAM RNA, to target binding sites on GAM3229 target RNA, herein designated GAM TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM3229 target RNA into GAM3229 target protein, herein designated GAM TARGET PROTEIN. GAM target protein is therefore outlined by a broken line.

[43566] It is appreciated that GAM3229 target gene, herein desig-

nated TARGET GENE, in fact represents a plurality of GAM3229 target genes. The mRNA of each one of this plurality of GAM3229 target genes comprises one or more target binding sites, each having a nucleotide sequence which is at least partly complementary to GAM3229 RNA, herein designated GAM RNA, and which when bound by GAM3229 RNA causes inhibition of translation of respective one or more GAM3229 target proteins.

[43567] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 8 with specific reference to translational inhibition exerted by GAM3229 gene, herein designated GAM GENE, on one or more GAM3229 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., Perspective: Glimpses of a

tiny RNA world, Science 294,779 (2001)).

[43568] It is appreciated that specific functions and accordingly utilities of GAM3229 correlate with, and may be deduced from, the identity of the target genes which GAM3229 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[43569]

[43570]

[43571] 15E1.2 (Accession XP_290596.1) is a GAM3229 target gene, herein designated TARGET GENE. 15E1.2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by 15E1.2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of 15E1.2 BINDING SITE, designated SEQ ID:7550, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43572] A function of GAM3229 is therefore inhibition of 15E1.2 (Accession XP_290596.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with 15E1.2.

[43573] Alpha-1-b glycoprotein (A1BG, Accession NP_570602.2) is another GAM3229 target gene, herein designated TARGET GENE. A1BG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by A1BG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of A1BG BINDING SITE, designated SEQ ID:4606, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43574] Another function of GAM3229 is therefore inhibition of Alpha-1-b glycoprotein (A1BG, Accession NP_570602.2), a gene which a plasma protein of unknown function. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with A1BG.

[43575] The function of A1BG and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Atp-binding cassette, sub-family b (mdr/tap), member 5 (ABCB5, Accession XP_291215.1) is another GAM3229 target gene, herein designated TARGET GENE. ABCB5 BINDING SITE is a target binding site found

in the 3` untranslated region of mRNA encoded by ABCB5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABCB5 BINDING SITE, designated SEQ ID:14539, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43576] Another function of GAM3229 is therefore inhibition of Atp-binding cassette, sub-family b (mdr/tap), member 5 (ABCB5, Accession XP_291215.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABCB5.

[43577] Amiloride-sensitive cation channel 2, neuronal (ACCN2, Accession NP_001086.2) is another GAM3229 target gene, herein designated TARGET GENE. ACCN2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACCN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ACCN2 BINDING SITE, designated SEQ ID:11565, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43578] Another function of GAM3229 is therefore inhibition of Amiloride-sensitive cation channel 2, neuronal (ACCN2, Accession NP_001086.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ACCN2.

[43579] Amiloride-sensitive cation channel 2, neuronal (ACCN2, Accession NP_064423.2) is another GAM3229 target gene, herein designated TARGET GENE. ACCN2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACCN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ACCN2 BINDING SITE, designated SEQ ID:11565, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43580] Another function of GAM3229 is therefore inhibition of Amiloride-sensitive cation channel 2, neuronal (ACCN2, Accession NP_064423.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ACCN2.

[43581] A disintegrin-like and metalloprotease (reprolysin type) with thrombospondin type 1 motif, 4 (ADAMTS4, Acces-

sion NP_005090.1) is another GAM3229 target gene, herein designated TARGET GENE. ADAMTS4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADAMTS4 BINDING SITE, designated SEQ ID:4409, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43582] Another function of GAM3229 is therefore inhibition of A disintegrin-like and metalloprotease (reprolysin type) with thrombospondin type 1 motif, 4 (ADAMTS4, Accession NP_005090.1), a gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADAMTS4.

[43583] The function of ADAMTS4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Adenylate cyclase 6 (ADCY6, Accession NP_056085.1) is another GAM3229 target gene, herein

designated TARGET GENE. ADCY6 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by ADCY6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADCY6 BINDING SITE, designated SEQ ID:16258, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43584] Another function of GAM3229 is therefore inhibition of Adenylate cyclase 6 (ADCY6, Accession NP_056085.1), a gene which this a membrane- bound, ca(2+)- inhibitable adenylyl cyclase (by similarity). Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADCY6.

[43585] The function of ADCY6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM67.2.Amylo-1, 6-glucosidase, 4-alpha-glucanotransferase (glycogen debranching enzyme, glycogen storage disease type iii) (AGL, Accession NP_000637.1) is another GAM3229 target gene, herein designated TARGET GENE. AGL BINDING SITE is a target

binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by AGL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AGL BINDING SITE, designated SEQ ID:14206, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43586] Another function of GAM3229 is therefore inhibition of Amylo-1, 6-glucosidase, 4-alpha-glucanotransferase (glycogen debranching enzyme, glycogen storage disease type iii) (AGL, Accession NP_000637.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AGL.

[43587] Absent in melanoma 1 (AIM1, Accession XP_166300.1) is another GAM3229 target gene, herein designated TARGET GENE. AIM1 BINDING SITE1 through AIM1 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by AIM1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AIM1 BINDING SITE1 through

AIM1 BINDING SITE3, designated SEQ ID:15456, SEQ ID:4262 and SEQ ID:3982 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43588] Another function of GAM3229 is therefore inhibition of Absent in melanoma 1 (AIM1, Accession XP_166300.1), a gene which is altered in association with tumor suppression in a model of human melanoma and therefore may be associated with Malignant melanoma. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Malignant melanoma, and of other diseases and clinical conditions associated with AIM1.

[43589] The function of AIM1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Arachidonate 15-lipoxygenase (ALOX15, Accession NP_001131.1) is another GAM3229 target gene, herein designated TARGET GENE. ALOX15 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ALOX15, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ALOX15 BINDING

SITE, designated SEQ ID:13880, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43590] Another function of GAM3229 is therefore inhibition of Arachidonate 15-lipoxygenase (ALOX15, Accession NP_001131.1), a gene which converts arachidonic acid to 15s- hydroperoxyeicosatetraenoic acid. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ALOX15.

[43591] The function of ALOX15 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.AP1S3 (Accession XP_291023.1) is another GAM3229 target gene, herein designated TARGET GENE. AP1S3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by AP1S3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AP1S3 BINDING SITE, designated SEQ ID:7058, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ

ID:221.

[43592] Another function of GAM3229 is therefore inhibition of AP1S3 (Accession XP_291023.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AP1S3.

[43593] Adaptor-related protein complex 3, sigma 2 subunit (AP3S2, Accession NP_005820.1) is another GAM3229 target gene, herein designated TARGET GENE. AP3S2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by AP3S2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AP3S2 BINDING SITE, designated SEQ ID:4992, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43594] Another function of GAM3229 is therefore inhibition of Adaptor-related protein complex 3, sigma 2 subunit (AP3S2, Accession NP_005820.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AP3S2.

[43595] Apoptotic protease activating factor (APAF1, Accession NP_037361.1) is another GAM3229 target gene, herein

designated TARGET GENE. APAF1 BINDING SITE1 and APAF1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by APAF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APAF1 BINDING SITE1 and APAF1 BINDING SITE2, designated SEQ ID:15973 and SEQ ID:15973 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43596] Another function of GAM3229 is therefore inhibition of Apoptotic protease activating factor (APAF1, Accession NP_037361.1), a gene which functions in the mitochondrial apoptotic pathway that leads to caspase 9 dependent activation of caspase 3 and therefore may be associated with Cancer. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Cancer, and of other diseases and clinical conditions associated with APAF1.

[43597] The function of APAF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Apoptotic protease activating factor (APAF1,

Accession NP_001151.1) is another GAM3229 target gene, herein designated TARGET GENE. APAF1 BINDING SITE1 and APAF1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by APAF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APAF1 BINDING SITE1 and APAF1 BINDING SITE2, designated SEQ ID:2783 and SEQ ID:2783 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43598] Another function of GAM3229 is therefore inhibition of Apoptotic protease activating factor (APAF1, Accession NP_001151.1), a gene which functions in the mitochondrial apoptotic pathway that leads to caspase 9 dependent activation of caspase 3 and therefore may be associated with Cancer. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Cancer, and of other diseases and clinical conditions associated with APAF1.

[43599] The function of APAF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM30.1.APM1 (Accession NP_004788.1) is another GAM3229 target gene, herein designated TARGET GENE. APM1 BINDING SITE1 and APM1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APM1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APM1 BINDING SITE1 and APM1 BINDING SITE2, designated SEQ ID:12655 and SEQ ID:9383 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43600] Another function of GAM3229 is therefore inhibition of APM1 (Accession NP_004788.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APM1.

[43601] Apolipoprotein c-iii (APOC3, Accession NP_000031.1) is another GAM3229 target gene, herein designated TARGET GENE. APOC3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APOC3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of APOC3 BINDING SITE, designated SEQ ID:20001, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43602] Another function of GAM3229 is therefore inhibition of Apolipoprotein c-iii (APOC3, Accession NP_000031.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APOC3.

[43603] Aprataxin (APTX, Accession NP_778243.1) is another GAM3229 target gene, herein designated TARGET GENE. APTX BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by APTX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APTX BINDING SITE, designated SEQ ID:404, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43604] Another function of GAM3229 is therefore inhibition of Aprataxin (APTX, Accession NP_778243.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with APTX.

[43605] Aprataxin (APTX, Accession NP_778242.1) is another GAM3229 target gene, herein designated TARGET GENE. APTX BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by APTX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APTX BINDING SITE, designated SEQ ID:404, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43606] Another function of GAM3229 is therefore inhibition of Aprataxin (APTX, Accession NP_778242.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APTX.

[43607] Aquaporin 6, kidney specific (AQP6, Accession NP_445738.1) is another GAM3229 target gene, herein designated TARGET GENE. AQP6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by AQP6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the

complementarity of the nucleotide sequences of AQP6 BINDING SITE, designated SEQ ID:3122, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43608] Another function of GAM3229 is therefore inhibition of Aquaporin 6, kidney specific (AQP6, Accession NP_445738.1), a gene which participates in distinct physiologic function such as glomerular filtration, tubular endocytosis, and acid- base metabolism. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AQP6.

[43609] The function of AQP6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM51.1.Aquaporin 6, kidney specific (AQP6, Accession NP_001643.1) is another GAM3229 target gene, herein designated TARGET GENE. AQP6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by AQP6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

AQP6 BINDING SITE, designated SEQ ID:3122, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43610] Another function of GAM3229 is therefore inhibition of Aquaporin 6, kidney specific (AQP6, Accession NP_001643.1), a gene which participates in distinct physiologic function such as glomerular filtration, tubular endocytosis, and acid- base metabolism. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AQP6.

[43611] The function of AQP6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM51.1.Archain 1 (ARCN1, Accession NP_001646.2) is another GAM3229 target gene, herein designated TARGET GENE. ARCN1 BINDING SITE1 and ARCN1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by ARCN1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARCN1 BINDING SITE1 and ARCN1 BINDING SITE2, designated SEQ ID:2072 and

SEQ ID:17074 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43612] Another function of GAM3229 is therefore inhibition of Archain 1 (ARCN1, Accession NP_001646.2), a gene which plays a fundamental role in eukaryotic cell biology. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARCN1.

[43613] The function of ARCN1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Rho gtpase activating protein 1 (ARHGAP1, Accession NP_004299.1) is another GAM3229 target gene, herein designated TARGET GENE. ARHGAP1 BINDING SITE1 and ARHGAP1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by ARHGAP1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARHGAP1 BINDING SITE1 and ARHGAP1 BINDING SITE2, designated SEQ ID:2783 and SEQ ID:7041 respectively, to the nucleotide sequence of

GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43614] Another function of GAM3229 is therefore inhibition of Rho gtpase activating protein 1 (ARHGAP1, Accession NP_004299.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARHGAP1.

[43615] Rho guanine nucleotide exchange factor (gef) 7 (ARHGEF7, Accession NP_663788.1) is another GAM3229 target gene, herein designated TARGET GENE. ARHGEF7 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ARHGEF7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARHGEF7 BINDING SITE, designated SEQ ID:13696, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43616] Another function of GAM3229 is therefore inhibition of Rho guanine nucleotide exchange factor (gef) 7 (ARHGEF7, Accession NP_663788.1), a gene which acts as a rac1 guanine nucleotide exchange factor (gef) and can induce

membrane ruffling. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARHGEF7.

[43617] The function of ARHGEF7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM40.2.ARPP-19 (Accession NP_006619.1) is another GAM3229 target gene, herein designated TARGET GENE. ARPP-19 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARPP-19, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARPP-19 BINDING SITE, designated SEQ ID:9396, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43618] Another function of GAM3229 is therefore inhibition of ARPP-19 (Accession NP_006619.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARPP-19.

[43619] Ankyrin repeat and socs box-containing 6 (ASB6, Accession NP_060343.1) is another GAM3229 target gene,

herein designated TARGET GENE. ASB6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ASB6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ASB6 BINDING SITE, designated SEQ ID:10286, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43620] Another function of GAM3229 is therefore inhibition of Ankyrin repeat and socs box-containing 6 (ASB6, Accession NP_060343.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ASB6.

[43621] Ankyrin repeat and socs box-containing 6 (ASB6, Accession NP_821066.1) is another GAM3229 target gene, herein designated TARGET GENE. ASB6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ASB6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ASB6 BINDING SITE, designated SEQ ID:10286, to the nu-

cleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43622] Another function of GAM3229 is therefore inhibition of Ankyrin repeat and socs box-containing 6 (ASB6, Accession NP_821066.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ASB6.

[43623] ATF7IP2 (Accession NP_079273.1) is another GAM3229 target gene, herein designated TARGET GENE. ATF7IP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ATF7IP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATF7IP2 BINDING SITE, designated SEQ ID:9615, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43624] Another function of GAM3229 is therefore inhibition of ATF7IP2 (Accession NP_079273.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATF7IP2.

[43625] Atpase, na+/k+ transporting, beta 2 polypeptide

(ATP1B2, Accession NP_001669.1) is another GAM3229 target gene, herein designated TARGET GENE. ATP1B2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ATP1B2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATP1B2 BINDING SITE, designated SEQ ID:4784, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43626] Another function of GAM3229 is therefore inhibition of Atpase, na+/k+ transporting, beta 2 polypeptide (ATP1B2, Accession NP_001669.1), a gene which catalyzes the hydrolysis of ATP coupled with the exchange of Na +/K+ ions across the plasma membrane. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP1B2.

[43627] The function of ATP1B2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Atpase, h+ transporting, lysosomal 38kda, v0 subunit d isoform 2 (ATP6V0D2, Accession

NP_689778.1) is another GAM3229 target gene, herein designated TARGET GENE. ATP6V0D2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ATP6V0D2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATP6V0D2 BINDING SITE, designated SEQ ID:19565, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43628] Another function of GAM3229 is therefore inhibition of Atpase, h+ transporting, lysosomal 38kda, v0 subunit d isoform 2 (ATP6V0D2, Accession NP_689778.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP6V0D2.

[43629] ATP6V1A (Accession NP_001681.2) is another GAM3229 target gene, herein designated TARGET GENE. ATP6V1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ATP6V1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

ATP6V1A BINDING SITE, designated SEQ ID:9671, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43630] Another function of GAM3229 is therefore inhibition of ATP6V1A (Accession NP_001681.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP6V1A.

[43631] Atpase, cu++ transporting, alpha polypeptide (menkes syndrome) (ATP7A, Accession NP_000043.1) is another GAM3229 target gene, herein designated TARGET GENE. ATP7A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ATP7A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATP7A BINDING SITE, designated SEQ ID:9876, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43632] Another function of GAM3229 is therefore inhibition of Atpase, cu++ transporting, alpha polypeptide (menkes syndrome) (ATP7A, Accession NP_000043.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention

and treatment of diseases and clinical conditions associated with ATP7A.

[43633] Axl receptor tyrosine kinase (AXL, Accession NP_001690.2) is another GAM3229 target gene, herein designated TARGET GENE. AXL BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by AXL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AXL BINDING SITE, designated SEQ ID:3840, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43634] Another function of GAM3229 is therefore inhibition of Axl receptor tyrosine kinase (AXL, Accession NP_001690.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AXL.

[43635] Axl receptor tyrosine kinase (AXL, Accession NP_068713.2) is another GAM3229 target gene, herein designated TARGET GENE. AXL BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by AXL, corresponding

to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AXL BINDING SITE, designated SEQ ID:3840, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43636] Another function of GAM3229 is therefore inhibition of Axl receptor tyrosine kinase (AXL, Accession NP_068713.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AXL.

[43637] Udp-gal:betaglcnac beta 1,4- galactosyltransferase, polypeptide 5 (B4GALT5, Accession NP_004767.1) is another GAM3229 target gene, herein designated TARGET GENE. B4GALT5 BINDING SITE1 and B4GALT5 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by B4GALT5, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of B4GALT5 BINDING SITE1 and B4GALT5 BINDING SITE2, designated SEQ ID:10951 and SEQ ID:4737 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated

GAM RNA, also designated SEQ ID:221.

[43638] Another function of GAM3229 is therefore inhibition of Udp-gal:betaglcnac beta 1,4- galactosyltransferase, polypeptide 5 (B4GALT5, Accession NP_004767.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with B4GALT5.

[43639] BCAP31 (Accession NP_005736.2) is another GAM3229 target gene, herein designated TARGET GENE. BCAP31 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BCAP31, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BCAP31 BINDING SITE, designated SEQ ID:3188, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43640] Another function of GAM3229 is therefore inhibition of BCAP31 (Accession NP_005736.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BCAP31.

[43641] B-cell cll/lymphoma 10 (BCL10, Accession NP_003912.1)

is another GAM3229 target gene, herein designated TARGET GENE. BCL10 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BCL10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BCL10 BINDING SITE, designated SEQ ID:7414, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43642] Another function of GAM3229 is therefore inhibition of B-cell cll/lymphoma 10 (BCL10, Accession NP_003912.1), a gene which is a positive regulator of lymphocyte proliferation, NF- kappaB activator. and therefore may be associated with Malt lymphoma, follicular lymphoma. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Malt lymphoma, follicular lymphoma, and of other diseases and clinical conditions associated with BCL10.

[43643] The function of BCL10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Bradykinin receptor b1 (BDKRB1, Accession

NP_000701.2) is another GAM3229 target gene, herein designated TARGET GENE. BDKRB1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BDKRB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BDKRB1 BINDING SITE, designated SEQ ID:15600, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43644] Another function of GAM3229 is therefore inhibition of Bradykinin receptor b1 (BDKRB1, Accession NP_000701.2), a gene which mediates intracellular calcium flux. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BDKRB1.

[43645] The function of BDKRB1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.BHD (Accession NP_659434.2) is another GAM3229 target gene, herein designated TARGET GENE. BHD BINDING SITE1 and BHD BINDING SITE2 are target binding sites found in untranslated regions of multiple

transcripts of mRNA encoded by BHD, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BHD BINDING SITE1 and BHD BINDING SITE2, designated SEQ ID:2783 and SEQ ID:15210 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43646] Another function of GAM3229 is therefore inhibition of BHD (Accession NP_659434.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BHD.

[43647] Butyrophilin, subfamily 3, member a1 (BTN3A1, Accession NP_008979.2) is another GAM3229 target gene, herein designated TARGET GENE. BTN3A1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BTN3A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BTN3A1 BINDING SITE, designated SEQ ID:12851, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43648] Another function of GAM3229 is therefore inhibition of Butyrophilin, subfamily 3, member a1 (BTN3A1, Accession NP_008979.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BTN3A1.

[43649] BXDC1 (Accession XP_166303.1) is another GAM3229 target gene, herein designated TARGET GENE. BXDC1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BXDC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BXDC1 BINDING SITE, designated SEQ ID:9229, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43650] Another function of GAM3229 is therefore inhibition of BXDC1 (Accession XP_166303.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BXDC1.

[43651] Chromosome 1 open reading frame 24 (C1orf24, Accession NP_443198.1) is another GAM3229 target gene, herein designated TARGET GENE. C1orf24 BINDING SITE is a target binding site found in the 3` untranslated region

of multiple transcripts of mRNA encoded by C1orf24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C1orf24 BINDING SITE, designated SEQ ID:3152, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43652] Another function of GAM3229 is therefore inhibition of Chromosome 1 open reading frame 24 (C1orf24, Accession NP_443198.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1orf24.

[43653] C1q and tumor necrosis factor related protein 6 (C1QTNF6, Accession NP_114116.2) is another GAM3229 target gene, herein designated TARGET GENE. C1QTNF6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C1QTNF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C1QTNF6 BINDING SITE, designated SEQ ID:19016, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43654] Another function of GAM3229 is therefore inhibition of C1q and tumor necrosis factor related protein 6 (C1QTNF6, Accession NP_114116.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1QTNF6.

[43655] Chromosome 20 open reading frame 110 (C20orf110, Accession XP_086728.2) is another GAM3229 target gene, herein designated TARGET GENE. C20orf110 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C20orf110, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf110 BINDING SITE, designated SEQ ID:19165, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43656] Another function of GAM3229 is therefore inhibition of Chromosome 20 open reading frame 110 (C20orf110, Accession XP_086728.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf110.

[43657] Chromosome 20 open reading frame 147 (C20orf147, Ac-

cession NP_689880.1) is another GAM3229 target gene, herein designated TARGET GENE. C20orf147 BINDING SITE1 and C20orf147 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by C20orf147, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf147 BINDING SITE1 and C20orf147 BINDING SITE2, designated SEQ ID:14837 and SEQ ID:4689 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43658] Another function of GAM3229 is therefore inhibition of Chromosome 20 open reading frame 147 (C20orf147, Accession NP_689880.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf147.

[43659] Chromosome 20 open reading frame 161 (C20orf161, Accession NP_690857.1) is another GAM3229 target gene, herein designated TARGET GENE. C20orf161 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by C20orf161, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf161 BINDING SITE, designated SEQ ID:16804, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43660] Another function of GAM3229 is therefore inhibition of Chromosome 20 open reading frame 161 (C20orf161, Accession NP_690857.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf161.

[43661] Chromosome 20 open reading frame 161 (C20orf161, Accession NP_219489.1) is another GAM3229 target gene, herein designated TARGET GENE. C20orf161 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by C20orf161, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf161 BINDING SITE, designated SEQ ID:16804, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43662] Another function of GAM3229 is therefore inhibition of Chromosome 20 open reading frame 161 (C20orf161, Accession NP_219489.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf161.

[43663] Chromosome 20 open reading frame 177 (C20orf177, Accession XP_290955.1) is another GAM3229 target gene, herein designated TARGET GENE. C20orf177 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C20orf177, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf177 BINDING SITE, designated SEQ ID:18324, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43664] Another function of GAM3229 is therefore inhibition of Chromosome 20 open reading frame 177 (C20orf177, Accession XP_290955.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf177.

[43665] Chromosome 22 open reading frame 19 (C22orf19, Accession NP_003669.2) is another GAM3229 target gene,

herein designated TARGET GENE. C22orf19 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C22orf19, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C22orf19 BINDING SITE, designated SEQ ID:12716, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43666] Another function of GAM3229 is therefore inhibition of Chromosome 22 open reading frame 19 (C22orf19, Accession NP_003669.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C22orf19.

[43667] C6orf141 (Accession NP_699175.1) is another GAM3229 target gene, herein designated TARGET GENE. C6orf141 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C6orf141, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C6orf141 BINDING SITE, designated SEQ ID:3400, to the nucleotide sequence of GAM3229 RNA, herein designated

GAM RNA, also designated SEQ ID:221.

[43668] Another function of GAM3229 is therefore inhibition of C6orf141 (Accession NP_699175.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C6orf141.

[43669] Chromosome 6 open reading frame 33 (C6orf33, Accession NP_588608.1) is another GAM3229 target gene, herein designated TARGET GENE. C6orf33 BINDING SITE1 and C6orf33 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by C6orf33, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C6orf33 BINDING SITE1 and C6orf33 BINDING SITE2, designated SEQ ID:15159 and SEQ ID:19984 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43670] Another function of GAM3229 is therefore inhibition of Chromosome 6 open reading frame 33 (C6orf33, Accession NP_588608.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C6orf33.

[43671] C6orf57 (Accession NP_660310.1) is another GAM3229 target gene, herein designated TARGET GENE. C6orf57 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C6orf57, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C6orf57 BINDING SITE, designated SEQ ID:16359, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43672] Another function of GAM3229 is therefore inhibition of C6orf57 (Accession NP_660310.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C6orf57.

[43673] C6orf65 (Accession NP_689944.1) is another GAM3229 target gene, herein designated TARGET GENE. C6orf65 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C6orf65, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C6orf65 BINDING SITE, designated SEQ ID:12905, to the

nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43674] Another function of GAM3229 is therefore inhibition of C6orf65 (Accession NP_689944.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C6orf65.

[43675] Chromosome 6 open reading frame 9 (C6orf9, Accession NP_071390.1) is another GAM3229 target gene, herein designated TARGET GENE. C6orf9 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C6orf9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C6orf9 BINDING SITE, designated SEQ ID:8509, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43676] Another function of GAM3229 is therefore inhibition of Chromosome 6 open reading frame 9 (C6orf9, Accession NP_071390.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C6orf9.

[43677] Reserved (C8orf13, Accession XP_088377.1) is another GAM3229 target gene, herein designated TARGET GENE. C8orf13 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C8orf13, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C8orf13 BINDING SITE, designated SEQ ID:7963, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43678] Another function of GAM3229 is therefore inhibition of Reserved (C8orf13, Accession XP_088377.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C8orf13.

[43679] Calcium modulating ligand (CAMLG, Accession NP_001736.1) is another GAM3229 target gene, herein designated TARGET GENE. CAMLG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAMLG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAMLG BINDING SITE, designated

SEQ ID:19721, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43680] Another function of GAM3229 is therefore inhibition of Calcium modulating ligand (CAMLG, Accession NP_001736.1), a gene which is likely involved in the mobilization of calcium as a result of the tcr/cd3 complex interaction. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAMLG.

[43681] The function of CAMLG and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Calpain 5 (CAPN5, Accession NP_004046.1) is another GAM3229 target gene, herein designated TARGET GENE. CAPN5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAPN5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAPN5 BINDING SITE, designated SEQ ID:8293, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ

ID:221.

[43682] Another function of GAM3229 is therefore inhibition of Calpain 5 (CAPN5, Accession NP_004046.1), a gene which . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAPN5.

[43683] The function of CAPN5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM307.1.CAPRI (Accession NP_008920.3) is another GAM3229 target gene, herein designated TARGET GENE. CAPRI BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAPRI, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAPRI BINDING SITE, designated SEQ ID:16875, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43684] Another function of GAM3229 is therefore inhibition of CAPRI (Accession NP_008920.3) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAPRI.

[43685] Caspase 10, apoptosis-related cysteine protease (CASP10, Accession NP_001221.1) is another GAM3229 target gene, herein designated TARGET GENE. CASP10 BINDING SITE1 and CASP10 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CASP10, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CASP10 BINDING SITE1 and CASP10 BINDING SITE2, designated SEQ ID:10169 and SEQ ID:9941 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43686] Another function of GAM3229 is therefore inhibition of Caspase 10, apoptosis-related cysteine protease (CASP10, Accession NP_001221.1), a gene which is one aspartate-specific cysteine protease and important in death receptor signaling or other cellular processes. and therefore may be associated with Gastric cancers . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Gastric cancers ., and of other diseases and clinical conditions associated with CASP10.

[43687] The function of CASP10 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.1.Caspase 10, apoptosis-related cysteine protease (CASP10, Accession NP_116758.1) is another GAM3229 target gene, herein designated TARGET GENE. CASP10 BINDING SITE1 and CASP10 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CASP10, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CASP10 BINDING SITE1 and CASP10 BINDING SITE2, designated SEQ ID:10169 and SEQ ID:10169 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43688] Another function of GAM3229 is therefore inhibition of Caspase 10, apoptosis-related cysteine protease (CASP10, Accession NP_116758.1), a gene which is one aspartate-specific cysteine protease and important in death receptor signaling or other cellular processes. and therefore may be associated with Gastric cancers . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Gastric cancers ., and of other diseases and clinical

conditions associated with CASP10.

[43689] The function of CASP10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.1.Caspase 10, apoptosis-related cysteine protease (CASP10, Accession NP_001221.1) is another GAM3229 target gene, herein designated TARGET GENE. CASP10 BINDING SITE1 and CASP10 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CASP10, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CASP10 BINDING SITE1 and CASP10 BINDING SITE2, designated SEQ ID:9941 and SEQ ID:9941 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43690] Another function of GAM3229 is therefore inhibition of Caspase 10, apoptosis-related cysteine protease (CASP10, Accession NP_001221.1), a gene which is one aspartate-specific cysteine protease and important in death receptor signaling or other cellular processes. and therefore may be associated with Gastric cancers . Accordingly, utilities

of GAM3229 include diagnosis, prevention and treatment of Gastric cancers ., and of other diseases and clinical conditions associated with CASP10.

[43691] The function of CASP10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.1.Chemokine (c-c motif) ligand 16 (CCL16, Accession NP_004581.1) is another GAM3229 target gene, herein designated TARGET GENE. CCL16 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CCL16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCL16 BINDING SITE, designated SEQ ID:5788, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43692] Another function of GAM3229 is therefore inhibition of Chemokine (c-c motif) ligand 16 (CCL16, Accession NP_004581.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCL16.

[43693] Chemokine (c-c motif) ligand 22 (CCL22, Accession

NP_002981.2) is another GAM3229 target gene, herein designated TARGET GENE. CCL22 BINDING SITE1 and CCL22 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CCL22, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCL22 BINDING SITE1 and CCL22 BINDING SITE2, designated SEQ ID:3458 and SEQ ID:15508 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43694] Another function of GAM3229 is therefore inhibition of Chemokine (c-c motif) ligand 22 (CCL22, Accession NP_002981.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCL22.

[43695] CDCP1 (Accession NP_073753.3) is another GAM3229 target gene, herein designated TARGET GENE. CDCP1 BINDING SITE1 and CDCP1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CDCP1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of CDCP1 BINDING SITE1 and CDCP1 BINDING SITE2, designated SEQ ID:10837 and SEQ ID:15862 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43696] Another function of GAM3229 is therefore inhibition of CDCP1 (Accession NP_073753.3) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDCP1.

[43697] Cadherin 1, type 1, e-cadherin (epithelial) (CDH1, Accession NP_004351.1) is another GAM3229 target gene, herein designated TARGET GENE. CDH1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CDH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDH1 BINDING SITE, designated SEQ ID:15318, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43698] Another function of GAM3229 is therefore inhibition of Cadherin 1, type 1, e-cadherin (epithelial) (CDH1, Accession NP_004351.1) . Accordingly, utilities of GAM3229 in-

clude diagnosis, prevention and treatment of diseases and clinical conditions associated with CDH1.

[43699] Cat eye syndrome chromosome region, candidate 1 (CECR1, Accession NP_059120.2) is another GAM3229 target gene, herein designated TARGET GENE. CECR1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CECR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CECR1 BINDING SITE, designated SEQ ID:4587, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43700] Another function of GAM3229 is therefore inhibition of Cat eye syndrome chromosome region, candidate 1 (CECR1, Accession NP_059120.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CECR1.

[43701] Cat eye syndrome chromosome region, candidate 1 (CECR1, Accession NP_803124.1) is another GAM3229 target gene, herein designated TARGET GENE. CECR1 BINDING SITE is a target binding site found in the 3` un-

translated region of multiple transcripts of mRNA encoded by CECR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CECR1 BINDING SITE, designated SEQ ID:4587, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43702] Another function of GAM3229 is therefore inhibition of Cat eye syndrome chromosome region, candidate 1 (CECR1, Accession NP_803124.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CECR1.

[43703] Centromere protein h (CENPH, Accession NP_075060.1) is another GAM3229 target gene, herein designated TARGET GENE. CENPH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CENPH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CENPH BINDING SITE, designated SEQ ID:14468, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ

ID:221.

[43704] Another function of GAM3229 is therefore inhibition of Centromere protein h (CENPH, Accession NP_075060.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CENPH.

[43705] CGI-43 (Accession NP_056437.1) is another GAM3229 target gene, herein designated TARGET GENE. CGI-43 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CGI-43, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CGI-43 BINDING SITE, designated SEQ ID:3459, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43706] Another function of GAM3229 is therefore inhibition of CGI-43 (Accession NP_056437.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CGI-43.

[43707] Chk1 checkpoint homolog (s. pombe) (CHEK1, Accession NP_001265.1) is another GAM3229 target gene, herein designated TARGET GENE. CHEK1 BINDING SITE is a target

binding site found in the 5` untranslated region of mRNA encoded by CHEK1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CHEK1 BINDING SITE, designated SEQ ID:1819, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43708] Another function of GAM3229 is therefore inhibition of Chk1 checkpoint homolog (s. pombe) (CHEK1, Accession NP_001265.1), a gene which a protein kinase that is required for the DNA damage checkpoint. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CHEK1.

[43709] The function of CHEK1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM3154.1.Cold autoinflammatory syndrome 1 (CIAS1, Accession NP_004886.2) is another GAM3229 target gene, herein designated TARGET GENE. CIAS1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CIAS1, corresponding to a target bind-

ing site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CIAS1 BINDING SITE, designated SEQ ID:8694, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43710] Another function of GAM3229 is therefore inhibition of Cold autoinflammatory syndrome 1 (CIAS1, Accession NP_004886.2), a gene which may mediate protein- protein interactions; contains a leucine rich repeat and therefore may be associated with Familial cold autoinflammatory syndrome, muckle- wells syndrome. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Familial cold autoinflammatory syndrome, muckle- wells syndrome, and of other diseases and clinical conditions associated with CIAS1.

[43711] The function of CIAS1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM90.1.CIP29 (Accession NP_115740.3) is another GAM3229 target gene, herein designated TARGET GENE. CIP29 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CIP29, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CIP29 BINDING SITE, designated SEQ ID:8546, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43712] Another function of GAM3229 is therefore inhibition of CIP29 (Accession NP_115740.3) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CIP29.

[43713] C-type (calcium dependent, carbohydrate-recognition domain) lectin, superfamily member 11 (CLECSF11, Accession NP_569708.1) is another GAM3229 target gene, herein designated TARGET GENE. CLECSF11 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CLECSF11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLECSF11 BINDING SITE, designated SEQ ID:17166, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43714] Another function of GAM3229 is therefore inhibition of C-

type (calcium dependent, carbohydrate-recognition domain) lectin, superfamily member 11 (CLECSF11, Accession NP_569708.1), a gene which may play a role in ligand internalization and presentation. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLECSF11.

[43715] The function of CLECSF11 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM571.1.C-type (calcium dependent, carbohydrate-recognition domain) lectin, superfamily member 12 (CLECSF12, Accession NP_072092.2) is another GAM3229 target gene, herein designated TARGET GENE. CLECSF12 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CLECSF12, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLECSF12 BINDING SITE, designated SEQ ID:2783, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43716] Another function of GAM3229 is therefore inhibition of C-type (calcium dependent, carbohydrate-recognition do-

main) lectin, superfamily member 12 (CLECSF12, Accession NP_072092.2), a gene which is a pattern- recognition receptor . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLECSF12.

[43717] The function of CLECSF12 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.C-type (calcium dependent, carbohydrate-recognition domain) lectin, superfamily member 9 (CLECSF9, Accession NP_055173.1) is another GAM3229 target gene, herein designated TARGET GENE. CLECSF9 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CLECSF9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLECSF9 BINDING SITE, designated SEQ ID:12935, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43718] Another function of GAM3229 is therefore inhibition of C-type (calcium dependent, carbohydrate-recognition domain) lectin, superfamily member 9 (CLECSF9, Accession

NP_055173.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLECSF9.

[43719] CMRF-35H (Accession XP_046925.1) is another GAM3229 target gene, herein designated TARGET GENE. CMRF-35H BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CMRF-35H, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CMRF-35H BINDING SITE, designated SEQ ID:3608, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43720] Another function of GAM3229 is therefore inhibition of CMRF-35H (Accession XP_046925.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CMRF-35H.

[43721] Contactin associated protein-like 2 (CNTNAP2, Accession NP_054860.1) is another GAM3229 target gene, herein designated TARGET GENE. CNTNAP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNTNAP2, corresponding to a target

binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CNTNAP2 BINDING SITE, designated SEQ ID:17240, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43722] Another function of GAM3229 is therefore inhibition of Contactin associated protein-like 2 (CNTNAP2, Accession NP_054860.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CNTNAP2.

[43723] Collectin sub-family member 12 (COLEC12, Accession NP_110408.2) is another GAM3229 target gene, herein designated TARGET GENE. COLEC12 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by COLEC12, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COLEC12 BINDING SITE, designated SEQ ID:5286, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43724] Another function of GAM3229 is therefore inhibition of

Collectin sub-family member 12 (COLEC12, Accession NP_110408.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COLEC12.

[43725] Coenzyme q7 homolog, ubiquinone (yeast) (COQ7, Accession NP_057222.2) is another GAM3229 target gene, herein designated TARGET GENE. COQ7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by COQ7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COQ7 BINDING SITE, designated SEQ ID:5762, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43726] Another function of GAM3229 is therefore inhibition of Coenzyme q7 homolog, ubiquinone (yeast) (COQ7, Accession NP_057222.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COQ7.

[43727] Carboxypeptidase a4 (CPA4, Accession NP_057436.1) is another GAM3229 target gene, herein designated TARGET GENE. CPA4 BINDING SITE is a target binding site found in

the 3` untranslated region of mRNA encoded by CPA4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CPA4 BINDING SITE, designated SEQ ID:2783, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43728] Another function of GAM3229 is therefore inhibition of Carboxypeptidase a4 (CPA4, Accession NP_057436.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CPA4.

[43729] cPLA2delta (Accession XP_208820.2) is another GAM3229 target gene, herein designated TARGET GENE. cPLA2delta BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by cPLA2delta, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of cPLA2delta BINDING SITE, designated SEQ ID:5366, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43730] Another function of GAM3229 is therefore inhibition of cPLA2delta (Accession XP_208820.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with cPLA2delta.

[43731] cPLA2delta (Accession NP_828848.1) is another GAM3229 target gene, herein designated TARGET GENE. cPLA2delta BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by cPLA2delta, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of cPLA2delta BINDING SITE, designated SEQ ID:5366, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43732] Another function of GAM3229 is therefore inhibition of cPLA2delta (Accession NP_828848.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with cPLA2delta.

[43733] Cleavage and polyadenylation specific factor 2, 100kda (CPSF2, Accession XP_029311.2) is another GAM3229 tar-

get gene, herein designated TARGET GENE. CPSF2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CPSF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CPSF2 BINDING SITE, designated SEQ ID:17815, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43734] Another function of GAM3229 is therefore inhibition of Cleavage and polyadenylation specific factor 2, 100kda (CPSF2, Accession XP_029311.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CPSF2.

[43735] CRB3 (Accession NP_777378.1) is another GAM3229 target gene, herein designated TARGET GENE. CRB3 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CRB3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CRB3 BINDING SITE, designated SEQ ID:2333, to the nucleotide sequence of GAM3229 RNA, herein des-

ignated GAM RNA, also designated SEQ ID:221.

[43736] Another function of GAM3229 is therefore inhibition of CRB3 (Accession NP_777378.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CRB3.

[43737] Cytokine receptor-like factor 3 (CRLF3, Accession NP_057070.2) is another GAM3229 target gene, herein designated TARGET GENE. CRLF3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CRLF3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CRLF3 BINDING SITE, designated SEQ ID:18242, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43738] Another function of GAM3229 is therefore inhibition of Cytokine receptor-like factor 3 (CRLF3, Accession NP_057070.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CRLF3.

[43739] Cartilage associated protein (CRTAP, Accession NP_006362.1) is another GAM3229 target gene, herein

designated TARGET GENE. CRTAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CRTAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CRTAP BINDING SITE, designated SEQ ID:7898, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43740] Another function of GAM3229 is therefore inhibition of Cartilage associated protein (CRTAP, Accession NP_006362.1), a gene which is a novel developmentally regulated chick embryo protein. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CRTAP.

[43741] The function of CRTAP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.CST (Accession NP_004852.1) is another GAM3229 target gene, herein designated TARGET GENE. CST BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CST, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CST BINDING SITE, designated SEQ ID:19277, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43742] Another function of GAM3229 is therefore inhibition of CST (Accession NP_004852.1), a gene which nucleotide-sugar transporter. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CST.

[43743] The function of CST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM221.1.CTEN (Accession NP_116254.3) is another GAM3229 target gene, herein designated TARGET GENE. CTEN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTEN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CTEN BINDING SITE, designated SEQ ID:12312, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43744] Another function of GAM3229 is therefore inhibition of CTEN (Accession NP_116254.3) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CTEN.

[43745] Cathepsin b (CTSB, Accession NP_680090.1) is another GAM3229 target gene, herein designated TARGET GENE. CTSB BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CTSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CTSB BINDING SITE, designated SEQ ID:1677, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43746] Another function of GAM3229 is therefore inhibition of Cathepsin b (CTSB, Accession NP_680090.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CTSB.

[43747] Cathepsin b (CTSB, Accession NP_680092.1) is another GAM3229 target gene, herein designated TARGET GENE. CTSB BINDING SITE is a target binding site found in the 5`

untranslated region of multiple transcripts of mRNA encoded by CTSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CTSB BINDING SITE, designated SEQ ID:1677, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43748] Another function of GAM3229 is therefore inhibition of Cathepsin b (CTSB, Accession NP_680092.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CTSB.

[43749] Cytochrome p450, subfamily i (aromatic compound-inducible), polypeptide 2 (CYP1A2, Accession NP_000752.1) is another GAM3229 target gene, herein designated TARGET GENE. CYP1A2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CYP1A2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYP1A2 BINDING SITE, designated SEQ ID:4564, to the nucleotide sequence of GAM3229

RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43750] Another function of GAM3229 is therefore inhibition of Cytochrome p450, subfamily i (aromatic compound-inducible), polypeptide 2 (CYP1A2, Accession NP_000752.1), a gene which intervenes in an NADPH- dependent electron transport pathway. and therefore may be associated with Porphyria cutanea tarda. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Porphyria cutanea tarda, and of other diseases and clinical conditions associated with CYP1A2.

[43751] The function of CYP1A2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Cytochrome p450, subfamily iib (phenobarbital-inducible), polypeptide 6 (CYP2B6, Accession NP_000758.1) is another GAM3229 target gene, herein designated TARGET GENE. CYP2B6 BINDING SITE1 and CYP2B6 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CYP2B6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide se-

quences of CYP2B6 BINDING SITE1 and CYP2B6 BINDING SITE2, designated SEQ ID:5285 and SEQ ID:11371 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43752] Another function of GAM3229 is therefore inhibition of Cytochrome p450, subfamily iib (phenobarbital-inducible), polypeptide 6 (CYP2B6, Accession NP_000758.1), a gene which oxidizes a variety of structurally unrelated compounds, including steroids, fatty acids, and xenobiotics. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYP2B6.

[43753] The function of CYP2B6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Cytochrome p450, subfamily iic (mephenytoin 4-hydroxylase), polypeptide 18 (CYP2C18, Accession NP_000763.1) is another GAM3229 target gene, herein designated TARGET GENE. CYP2C18 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CYP2C18, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of CYP2C18 BINDING SITE, designated SEQ ID:7874, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43754] Another function of GAM3229 is therefore inhibition of Cytochrome p450, subfamily iic (mephenytoin 4-hydroxylase), polypeptide 18 (CYP2C18, Accession NP_000763.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYP2C18.

[43755] CYP51A1 (Accession NP_000777.1) is another GAM3229 target gene, herein designated TARGET GENE. CYP51A1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CYP51A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYP51A1 BINDING SITE, designated SEQ ID:18360, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43756] Another function of GAM3229 is therefore inhibition of CYP51A1 (Accession NP_000777.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with CYP51A1.

[43757] Cytochrome p450, subfamily viiib (sterol 12-alpha-hydroxylase), polypeptide 1 (CYP8B1, Accession NP_004382.1) is another GAM3229 target gene, herein designated TARGET GENE. CYP8B1 BINDING SITE1 and CYP8B1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CYP8B1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYP8B1 BINDING SITE1 and CYP8B1 BINDING SITE2, designated SEQ ID:5673 and SEQ ID:15966 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43758] Another function of GAM3229 is therefore inhibition of Cytochrome p450, subfamily viiib (sterol 12-alpha-hydroxylase), polypeptide 1 (CYP8B1, Accession NP_004382.1), a gene which functions in bile acid biosynthesis. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYP8B1.

[43759] The function of CYP8B1 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.Debranching enzyme homolog 1 (s. cerevisiae) (DBR1, Accession NP_057300.1) is another GAM3229 target gene, herein designated TARGET GENE. DBR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DBR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DBR1 BINDING SITE, designated SEQ ID:6398, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43760] Another function of GAM3229 is therefore inhibition of Debranching enzyme homolog 1 (s. cerevisiae) (DBR1, Accession NP_057300.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DBR1.

[43761] Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_000546.2) is another GAM3229 target gene, herein designated TARGET GENE. DCX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DCX,

corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DCX BINDING SITE, designated SEQ ID:8602, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43762] Another function of GAM3229 is therefore inhibition of Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_000546.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DCX.

[43763] Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_835366.1) is another GAM3229 target gene, herein designated TARGET GENE. DCX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DCX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DCX BINDING SITE, designated SEQ ID:8602, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43764] Another function of GAM3229 is therefore inhibition of

Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_835366.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DCX.

[43765] Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_835365.1) is another GAM3229 target gene, herein designated TARGET GENE. DCX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DCX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DCX BINDING SITE, designated SEQ ID:8602, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43766] Another function of GAM3229 is therefore inhibition of Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_835365.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DCX.

[43767] Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_835364.1) is another GAM3229 target gene, herein designated TARGET GENE. DCX BINDING SITE

is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DCX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DCX BINDING SITE, designated SEQ ID:8602, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43768] Another function of GAM3229 is therefore inhibition of Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_835364.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DCX.

[43769] DEPP (Accession NP_008952.1) is another GAM3229 target gene, herein designated TARGET GENE. DEPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DEPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DEPP BINDING SITE, designated SEQ ID:10348, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43770] Another function of GAM3229 is therefore inhibition of DEPP (Accession NP_008952.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DEPP.

[43771] Dna fragmentation factor, 40kda, beta polypeptide (caspase-activated dnase) (DFFB, Accession NP_004393.1) is another GAM3229 target gene, herein designated TARGET GENE. DFFB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DFFB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DFFB BINDING SITE, designated SEQ ID:8629, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43772] Another function of GAM3229 is therefore inhibition of Dna fragmentation factor, 40kda, beta polypeptide (caspase-activated dnase) (DFFB, Accession NP_004393.1), a gene which induces DNA fragmentation and chromatin condensation during apoptosis. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DFFB.

[43773] The function of DFFB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Dihydrofolate reductase (DHFR, Accession NP_000782.1) is another GAM3229 target gene, herein designated TARGET GENE. DHFR BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHFR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DHFR BINDING SITE, designated SEQ ID:19487, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43774] Another function of GAM3229 is therefore inhibition of Dihydrofolate reductase (DHFR, Accession NP_000782.1), a gene which converts dihydrofolate into tetrahydrofolate. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DHFR.

[43775] The function of DHFR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM64.1.DIRAS1 (Accession NP_660156.1) is another GAM3229 target gene, herein designated TARGET GENE. DIRAS1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DIRAS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DIRAS1 BINDING SITE, designated SEQ ID:19599, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43776] Another function of GAM3229 is therefore inhibition of DIRAS1 (Accession NP_660156.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DIRAS1.

[43777] Disrupted in schizophrenia 1 (DISC1, Accession NP_061132.1) is another GAM3229 target gene, herein designated TARGET GENE. DISC1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DISC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DISC1 BINDING SITE, designated SEQ ID:14849, to the nucleotide sequence of GAM3229

RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43778] Another function of GAM3229 is therefore inhibition of Disrupted in schizophrenia 1 (DISC1, Accession NP_061132.1), a gene which has globular N- terminal domain(s) and a helical C- terminal domain. and therefore may be associated with Schizophrenia . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Schizophrenia ., and of other diseases and clinical conditions associated with DISC1.

[43779] The function of DISC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM116.1.DKFZP434B044 (Accession NP_113664.1) is another GAM3229 target gene, herein designated TARGET GENE. DKFZP434B044 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP434B044, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434B044 BINDING SITE, designated SEQ ID:13291, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:221.

[43780] Another function of GAM3229 is therefore inhibition of DKFZP434B044 (Accession NP_113664.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434B044.

[43781] DKFZp434C0923 (Accession NP_060068.1) is another GAM3229 target gene, herein designated TARGET GENE. DKFZp434C0923 BINDING SITE1 and DKFZp434C0923 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DKFZp434C0923, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp434C0923 BINDING SITE1 and DKFZp434C0923 BINDING SITE2, designated SEQ ID:12561 and SEQ ID:15862 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43782] Another function of GAM3229 is therefore inhibition of DKFZp434C0923 (Accession NP_060068.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with DKFZp434C0923.

[43783] DKFZP434F0318 (Accession NP_110444.1) is another GAM3229 target gene, herein designated TARGET GENE. DKFZP434F0318 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP434F0318, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434F0318 BINDING SITE, designated SEQ ID:1165, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43784] Another function of GAM3229 is therefore inhibition of DKFZP434F0318 (Accession NP_110444.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434F0318.

[43785] DKFZp434J0226 (Accession XP_051327.1) is another GAM3229 target gene, herein designated TARGET GENE. DKFZp434J0226 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by DKFZp434J0226, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp434J0226 BINDING SITE, designated SEQ ID:10801, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43786] Another function of GAM3229 is therefore inhibition of DKFZp434J0226 (Accession XP_051327.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp434J0226.

[43787] DKFZP564J0863 (Accession NP_056274.1) is another GAM3229 target gene, herein designated TARGET GENE. DKFZP564J0863 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP564J0863, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP564J0863 BINDING SITE, designated SEQ ID:15802, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43788] Another function of GAM3229 is therefore inhibition of DKFZP564J0863 (Accession NP_056274.1) . Accordingly,

utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP564J0863.

[43789] DKFZP566I1024 (Accession NP_056226.1) is another GAM3229 target gene, herein designated TARGET GENE. DKFZP566I1024 BINDING SITE1 and DKFZP566I1024 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DKFZP566I1024, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP566I1024 BINDING SITE1 and DKFZP566I1024 BINDING SITE2, designated SEQ ID:19870 and SEQ ID:18357 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43790] Another function of GAM3229 is therefore inhibition of DKFZP566I1024 (Accession NP_056226.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP566I1024.

[43791] DKFZP586A0522 (Accession NP_054752.1) is another GAM3229 target gene, herein designated TARGET GENE.

DKFZP586A0522 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP586A0522, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP586A0522 BINDING SITE, designated SEQ ID:15526, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43792] Another function of GAM3229 is therefore inhibition of DKFZP586A0522 (Accession NP_054752.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP586A0522.

[43793] DKFZp667B1218 (Accession NP_808881.1) is another GAM3229 target gene, herein designated TARGET GENE. DKFZp667B1218 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp667B1218, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp667B1218 BINDING SITE, designated SEQ ID:10537, to the nucleotide sequence of

GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43794] Another function of GAM3229 is therefore inhibition of DKFZp667B1218 (Accession NP_808881.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp667B1218.

[43795] DKFZp667E0512 (Accession XP_117353.1) is another GAM3229 target gene, herein designated TARGET GENE. DKFZp667E0512 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp667E0512, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp667E0512 BINDING SITE, designated SEQ ID:18552, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43796] Another function of GAM3229 is therefore inhibition of DKFZp667E0512 (Accession XP_117353.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp667E0512.

[43797] DKFZp686G052 (Accession XP_300559.1) is another GAM3229 target gene, herein designated TARGET GENE. DKFZp686G052 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp686G052, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp686G052 BINDING SITE, designated SEQ ID:6504, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43798] Another function of GAM3229 is therefore inhibition of DKFZp686G052 (Accession XP_300559.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp686G052.

[43799] DKFZp761H039 (Accession NP_061181.1) is another GAM3229 target gene, herein designated TARGET GENE. DKFZp761H039 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp761H039, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of DKFZp761H039 BINDING SITE, designated SEQ ID:13622, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43800] Another function of GAM3229 is therefore inhibition of DKFZp761H039 (Accession NP_061181.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761H039.

[43801] DKFZp761P1121 (Accession NP_690870.1) is another GAM3229 target gene, herein designated TARGET GENE. DKFZp761P1121 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp761P1121, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761P1121 BINDING SITE, designated SEQ ID:10832, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43802] Another function of GAM3229 is therefore inhibition of DKFZp761P1121 (Accession NP_690870.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with DKFZp761P1121.

[43803] DKFZp762C2414 (Accession NP_848637.1) is another GAM3229 target gene, herein designated TARGET GENE. DKFZp762C2414 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp762C2414, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp762C2414 BINDING SITE, designated SEQ ID:7031, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43804] Another function of GAM3229 is therefore inhibition of DKFZp762C2414 (Accession NP_848637.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp762C2414.

[43805] DKFZp762H185 (Accession XP_172976.2) is another GAM3229 target gene, herein designated TARGET GENE. DKFZp762H185 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp762H185, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp762H185 BINDING SITE, designated SEQ ID:4228, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43806] Another function of GAM3229 is therefore inhibition of DKFZp762H185 (Accession XP_172976.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp762H185.

[43807] Dystrophia myotonica-protein kinase (DMPK, Accession NP_004400.3) is another GAM3229 target gene, herein designated TARGET GENE. DMPK BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by DMPK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DMPK BINDING SITE, designated SEQ ID:7032, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43808] Another function of GAM3229 is therefore inhibition of

Dystrophia myotonica-protein kinase (DMPK, Accession NP_004400.3) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DMPK.

[43809] Dnaj (hsp40) homolog, subfamily a, member 3 (DNAJA3, Accession NP_005138.2) is another GAM3229 target gene, herein designated TARGET GENE. DNAJA3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DNAJA3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DNAJA3 BINDING SITE, designated SEQ ID:6370, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43810] Another function of GAM3229 is therefore inhibition of Dnaj (hsp40) homolog, subfamily a, member 3 (DNAJA3, Accession NP_005138.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DNAJA3.

[43811] DUSP18 (Accession NP_689724.2) is another GAM3229 target gene, herein designated TARGET GENE. DUSP18 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by DUSP18, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DUSP18 BINDING SITE, designated SEQ ID:7626, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43812] Another function of GAM3229 is therefore inhibition of DUSP18 (Accession NP_689724.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DUSP18.

[43813] Dual specificity phosphatase 19 (DUSP19, Accession NP_543152.1) is another GAM3229 target gene, herein designated TARGET GENE. DUSP19 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DUSP19, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DUSP19 BINDING SITE, designated SEQ ID:6797, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43814] Another function of GAM3229 is therefore inhibition of Dual specificity phosphatase 19 (DUSP19, Accession NP_543152.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DUSP19.

[43815] Dual specificity phosphatase 7 (DUSP7, Accession XP_037430.6) is another GAM3229 target gene, herein designated TARGET GENE. DUSP7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DUSP7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DUSP7 BINDING SITE, designated SEQ ID:6796, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43816] Another function of GAM3229 is therefore inhibition of Dual specificity phosphatase 7 (DUSP7, Accession XP_037430.6), a gene which is a member of the dual specificity protein phosphatase family . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DUSP7.

[43817] The function of DUSP7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM71.1.Dual-specificity tyrosine-(y)-phosphorylation regulated kinase 1a (DYRK1A, Accession NP_567824.1) is another GAM3229 target gene, herein designated TARGET GENE. DYRK1A BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by DYRK1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DYRK1A BINDING SITE, designated SEQ ID:15252, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43818] Another function of GAM3229 is therefore inhibition of Dual-specificity tyrosine-(y)-phosphorylation regulated kinase 1a (DYRK1A, Accession NP_567824.1), a gene which regulates cell proliferation and may be involved in brain development . and therefore may be associated with Down syndrome. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Down syndrome, and of other diseases and clinical conditions asso-

ciated with DYRK1A.

[43819] The function of DYRK1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.Eukaryotic translation initiation factor 5a2 (EIF5A2, Accession NP_065123.1) is another GAM3229 target gene, herein designated TARGET GENE. EIF5A2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by EIF5A2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EIF5A2 BINDING SITE, designated SEQ ID:14800, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43820] Another function of GAM3229 is therefore inhibition of Eukaryotic translation initiation factor 5a2 (EIF5A2, Accession NP_065123.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EIF5A2.

[43821] ELP3 (Accession NP_060561.3) is another GAM3229 target gene, herein designated TARGET GENE. ELP3 BINDING SITE is a target binding site found in the 3` untranslated re-

gion of mRNA encoded by ELP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ELP3 BINDING SITE, designated SEQ ID:11180, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43822] Another function of GAM3229 is therefore inhibition of ELP3 (Accession NP_060561.3) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ELP3.

[43823] Ecotropic viral integration site 5 (EVI5, Accession NP_005656.2) is another GAM3229 target gene, herein designated TARGET GENE. EVI5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by EVI5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EVI5 BINDING SITE, designated SEQ ID:10675, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43824] Another function of GAM3229 is therefore inhibition of

Ecotropic viral integration site 5 (EVI5, Accession NP_005656.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EVI5.

[43825] Coagulation factor iii (thromboplastin, tissue factor) (F3, Accession NP_001984.1) is another GAM3229 target gene, herein designated TARGET GENE. F3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by F3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of F3 BINDING SITE, designated SEQ ID:17533, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43826] Another function of GAM3229 is therefore inhibition of Coagulation factor iii (thromboplastin, tissue factor) (F3, Accession NP_001984.1), a gene which functions in normal hemostasis. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with F3.

[43827] The function of F3 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM136.1.Fatty acid binding protein 2, intestinal (FABP2, Accession NP_000125.1) is another GAM3229 target gene, herein designated TARGET GENE. FABP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FABP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FABP2 BINDING SITE, designated SEQ ID:15832, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43828] Another function of GAM3229 is therefore inhibition of Fatty acid binding protein 2, intestinal (FABP2, Accession NP_000125.1), a gene which may have a role in dietary fat uptake or processing. and therefore may be associated with Cardiovascular disease and type 2 diabetes. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Cardiovascular disease and type 2 diabetes., and of other diseases and clinical conditions associated with FABP2.

[43829] The function of FABP2 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM189.1.Fanconi anemia, complementation group f (FANCF, Accession NP_073562.1) is another GAM3229 target gene, herein designated TARGET GENE. FANCF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FANCF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FANCF BINDING SITE, designated SEQ ID:12811, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43830] Another function of GAM3229 is therefore inhibition of Fanconi anemia, complementation group f (FANCF, Accession NP_073562.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FANCF.

[43831] FBXW8 (Accession NP_699179.2) is another GAM3229 target gene, herein designated TARGET GENE. FBXW8 BINDING SITE1 and FBXW8 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by FBXW8, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FBXW8 BINDING SITE1 and FBXW8 BINDING SITE2, designated SEQ ID:14800 and SEQ ID:14800 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43832] Another function of GAM3229 is therefore inhibition of FBXW8 (Accession NP_699179.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FBXW8.

[43833] FBXW8 (Accession NP_036306.1) is another GAM3229 target gene, herein designated TARGET GENE. FBXW8 BINDING SITE1 and FBXW8 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by FBXW8, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FBXW8 BINDING SITE1 and FBXW8 BINDING SITE2, designated SEQ ID:3077 and SEQ ID:3077 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43834] Another function of GAM3229 is therefore inhibition of

FBXW8 (Accession NP_036306.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FBXW8.

[43835] Fc fragment of iga, receptor for (FCAR, Accession NP_579813.1) is another GAM3229 target gene, herein designated TARGET GENE. FCAR BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FCAR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FCAR BINDING SITE, designated SEQ ID:14078, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43836] Another function of GAM3229 is therefore inhibition of Fc fragment of iga, receptor for (FCAR, Accession NP_579813.1), a gene which binds to the fc region of immunoglobulins alpha and mediates several functions including cytokine production. and therefore may be associated with Iga nephropathy. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Iga nephropathy., and of other diseases and clinical conditions associated with FCAR.

[43837] The function of FCAR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.FCRH1 (Accession NP_443170.1) is another GAM3229 target gene, herein designated TARGET GENE. FCRH1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FCRH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FCRH1 BINDING SITE, designated SEQ ID:10358, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43838] Another function of GAM3229 is therefore inhibition of FCRH1 (Accession NP_443170.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FCRH1.

[43839] Fgd1 family, member 2 (FGD2, Accession NP_775829.1) is another GAM3229 target gene, herein designated TARGET GENE. FGD2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FGD2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGD2 BINDING SITE, designated SEQ ID:7015, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43840] Another function of GAM3229 is therefore inhibition of Fgd1 family, member 2 (FGD2, Accession NP_775829.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGD2.

[43841] Fragile histidine triad gene (FHIT, Accession NP_002003.1) is another GAM3229 target gene, herein designated TARGET GENE. FHIT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

FHIT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FHIT BINDING SITE, designated SEQ ID:894, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43842] Another function of GAM3229 is therefore inhibition of Fragile histidine triad gene (FHIT, Accession NP_002003.1), a gene which cleaves a- 5'- ppp- 5'a to yield amp and adp. possible tumor suppressor for specific tissues. and therefore may be associated with Cancers. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Cancers., and of other diseases and clinical conditions associated with FHIT.

[43843] The function of FHIT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM664.2.FISH (Accession NP_055446.1) is another GAM3229 target gene, herein designated TARGET GENE. FISH BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FISH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FISH BINDING SITE, designated SEQ ID:15859, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43844] Another function of GAM3229 is therefore inhibition of FISH (Accession NP_055446.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FISH.

[43845] FLJ00007 (Accession NP_258260.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ00007 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ00007, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ00007 BINDING SITE, designated SEQ ID:12711, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43846] Another function of GAM3229 is therefore inhibition of FLJ00007 (Accession NP_258260.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ00007.

[43847] FLJ00060 (Accession XP_028154.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ00060 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ00060, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ00060 BINDING SITE, designated SEQ ID:717, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43848] Another function of GAM3229 is therefore inhibition of FLJ00060 (Accession XP_028154.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ00060.

[43849] FLJ10276 (Accession NP_060515.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ10276 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10276, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10276 BINDING SITE, designated SEQ ID:11366, to the

nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43850] Another function of GAM3229 is therefore inhibition of FLJ10276 (Accession NP_060515.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10276.

[43851] FLJ10520 (Accession NP_060594.2) is another GAM3229 target gene, herein designated TARGET GENE. FLJ10520 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10520, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10520 BINDING SITE, designated SEQ ID:9307, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43852] Another function of GAM3229 is therefore inhibition of FLJ10520 (Accession NP_060594.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10520.

[43853] FLJ10535 (Accession NP_060599.1) is another GAM3229

target gene, herein designated TARGET GENE. FLJ10535 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10535, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10535 BINDING SITE, designated SEQ ID:6398, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43854] Another function of GAM3229 is therefore inhibition of FLJ10535 (Accession NP_060599.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10535.

[43855] FLJ10700 (Accession NP_060652.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ10700 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10700, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10700 BINDING SITE, designated SEQ ID:4483, to the nucleotide sequence of GAM3229 RNA, herein designated

GAM RNA, also designated SEQ ID:221.

[43856] Another function of GAM3229 is therefore inhibition of FLJ10700 (Accession NP_060652.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10700.

[43857] FLJ10847 (Accession NP_060712.2) is another GAM3229 target gene, herein designated TARGET GENE. FLJ10847 BINDING SITE1 through FLJ10847 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by FLJ10847, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10847 BINDING SITE1 through FLJ10847 BINDING SITE3, designated SEQ ID:7550, SEQ ID:8121 and SEQ ID:3502 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43858] Another function of GAM3229 is therefore inhibition of FLJ10847 (Accession NP_060712.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10847.

[43859] FLJ11230 (Accession NP_060836.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ11230 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ11230, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11230 BINDING SITE, designated SEQ ID:9182, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43860] Another function of GAM3229 is therefore inhibition of FLJ11230 (Accession NP_060836.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11230.

[43861] FLJ11323 (Accession NP_060860.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ11323 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FLJ11323, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11323 BINDING SITE, designated

SEQ ID:7842, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43862] Another function of GAM3229 is therefore inhibition of FLJ11323 (Accession NP_060860.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11323.

[43863] FLJ12610 (Accession NP_079058.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ12610 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12610, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12610 BINDING SITE, designated SEQ ID:13971, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43864] Another function of GAM3229 is therefore inhibition of FLJ12610 (Accession NP_079058.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12610.

[43865] FLJ12747 (Accession XP_290972.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ12747 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12747, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12747 BINDING SITE, designated SEQ ID:3806, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43866] Another function of GAM3229 is therefore inhibition of FLJ12747 (Accession XP_290972.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12747.

[43867] FLJ12903 (Accession NP_073590.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ12903 BINDING SITE1 and FLJ12903 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ12903, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12903 BINDING SITE1 and

FLJ12903 BINDING SITE2, designated SEQ ID:15331 and SEQ ID:19721 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43868] Another function of GAM3229 is therefore inhibition of FLJ12903 (Accession NP_073590.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12903.

[43869] FLJ12975 (Accession NP_079085.2) is another GAM3229 target gene, herein designated TARGET GENE. FLJ12975 BINDING SITE1 and FLJ12975 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ12975, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12975 BINDING SITE1 and FLJ12975 BINDING SITE2, designated SEQ ID:6872 and SEQ ID:3161 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43870] Another function of GAM3229 is therefore inhibition of FLJ12975 (Accession NP_079085.2) . Accordingly, utilities

of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12975.

[43871] FLJ12985 (Accession NP_079200.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ12985 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12985, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12985 BINDING SITE, designated SEQ ID:7712, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43872] Another function of GAM3229 is therefore inhibition of FLJ12985 (Accession NP_079200.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12985.

[43873] FLJ13072 (Accession XP_117117.2) is another GAM3229 target gene, herein designated TARGET GENE. FLJ13072 BINDING SITE1 and FLJ13072 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ13072, corresponding to target binding sites

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13072 BINDING SITE1 and FLJ13072 BINDING SITE2, designated SEQ ID:6829 and SEQ ID:18493 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43874] Another function of GAM3229 is therefore inhibition of FLJ13072 (Accession XP_117117.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13072.

[43875] FLJ13590 (Accession NP_079116.2) is another GAM3229 target gene, herein designated TARGET GENE. FLJ13590 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ13590, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13590 BINDING SITE, designated SEQ ID:6224, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43876] Another function of GAM3229 is therefore inhibition of

FLJ13590 (Accession NP_079116.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13590.

[43877] FLJ13955 (Accession NP_079035.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ13955 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13955, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13955 BINDING SITE, designated SEQ ID:7938, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43878] Another function of GAM3229 is therefore inhibition of FLJ13955 (Accession NP_079035.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13955.

[43879] FLJ14054 (Accession NP_078839.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ14054 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ14054, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14054 BINDING SITE, designated SEQ ID:8656, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43880] Another function of GAM3229 is therefore inhibition of FLJ14054 (Accession NP_078839.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14054.

[43881] FLJ14351 (Accession NP_079008.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ14351 BINDING SITE1 and FLJ14351 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ14351, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14351 BINDING SITE1 and FLJ14351 BINDING SITE2, designated SEQ ID:7578 and SEQ ID:8490 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43882] Another function of GAM3229 is therefore inhibition of FLJ14351 (Accession NP_079008.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14351.

[43883] FLJ14803 (Accession NP_116231.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ14803 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ14803, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14803 BINDING SITE, designated SEQ ID:18549, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43884] Another function of GAM3229 is therefore inhibition of FLJ14803 (Accession NP_116231.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14803.

[43885] FLJ20038 (Accession NP_060104.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ20038 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by FLJ20038, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20038 BINDING SITE, designated SEQ ID:14023, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43886] Another function of GAM3229 is therefore inhibition of FLJ20038 (Accession NP_060104.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20038.

[43887] FLJ20045 (Accession NP_060108.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ20045 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20045, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20045 BINDING SITE, designated SEQ ID:603, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43888] Another function of GAM3229 is therefore inhibition of

FLJ20045 (Accession NP_060108.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20045.

[43889] FLJ20125 (Accession NP_060146.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ20125 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20125, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20125 BINDING SITE, designated SEQ ID:12250, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43890] Another function of GAM3229 is therefore inhibition of FLJ20125 (Accession NP_060146.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20125.

[43891] FLJ20200 (Accession NP_060178.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ20200 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ20200, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20200 BINDING SITE, designated SEQ ID:18150, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43892] Another function of GAM3229 is therefore inhibition of FLJ20200 (Accession NP_060178.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20200.

[43893] FLJ20671 (Accession NP_060394.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ20671 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20671, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20671 BINDING SITE, designated SEQ ID:19922, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43894] Another function of GAM3229 is therefore inhibition of FLJ20671 (Accession NP_060394.1) . Accordingly, utilities

of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20671.

[43895] FLJ20729 (Accession NP_060423.2) is another GAM3229 target gene, herein designated TARGET GENE. FLJ20729 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20729, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20729 BINDING SITE, designated SEQ ID:7073, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43896] Another function of GAM3229 is therefore inhibition of FLJ20729 (Accession NP_060423.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20729.

[43897] FLJ21302 (Accession NP_075052.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ21302 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ21302, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ21302 BINDING SITE, designated SEQ ID:3479, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43898] Another function of GAM3229 is therefore inhibition of FLJ21302 (Accession NP_075052.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ21302.

[43899] FLJ22347 (Accession NP_073741.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ22347 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ22347, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22347 BINDING SITE, designated SEQ ID:15136, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43900] Another function of GAM3229 is therefore inhibition of FLJ22347 (Accession NP_073741.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ22347.

[43901] FLJ22529 (Accession NP_079065.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ22529 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ22529, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22529 BINDING SITE, designated SEQ ID:19173, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43902] Another function of GAM3229 is therefore inhibition of FLJ22529 (Accession NP_079065.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22529.

[43903] FLJ22800 (Accession NP_079071.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ22800 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ22800, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ22800 BINDING SITE, designated SEQ ID:3918, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43904] Another function of GAM3229 is therefore inhibition of FLJ22800 (Accession NP_079071.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22800.

[43905] FLJ23024 (Accession NP_079212.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ23024 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23024, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23024 BINDING SITE, designated SEQ ID:2778, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43906] Another function of GAM3229 is therefore inhibition of FLJ23024 (Accession NP_079212.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ23024.

[43907] FLJ23040 (Accession NP_079450.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ23040 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23040, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23040 BINDING SITE, designated SEQ ID:7588, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43908] Another function of GAM3229 is therefore inhibition of FLJ23040 (Accession NP_079450.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23040.

[43909] FLJ23047 (Accession NP_078824.2) is another GAM3229 target gene, herein designated TARGET GENE. FLJ23047 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23047, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ23047 BINDING SITE, designated SEQ ID:11628, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43910] Another function of GAM3229 is therefore inhibition of FLJ23047 (Accession NP_078824.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23047.

[43911] FLJ23356 (Accession NP_115613.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ23356 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23356, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23356 BINDING SITE, designated SEQ ID:8065, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43912] Another function of GAM3229 is therefore inhibition of FLJ23356 (Accession NP_115613.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23356.

[43913] FLJ23416 (Accession NP_115614.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ23416 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23416, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23416 BINDING SITE, designated SEQ ID:15550, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43914] Another function of GAM3229 is therefore inhibition of FLJ23416 (Accession NP_115614.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23416.

[43915] FLJ23563 (Accession XP_041701.4) is another GAM3229 target gene, herein designated TARGET GENE. FLJ23563 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23563, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23563 BINDING SITE, designated SEQ ID:16466, to the

nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43916] Another function of GAM3229 is therefore inhibition of FLJ23563 (Accession XP_041701.4) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23563.

[43917] FLJ25286 (Accession NP_689759.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ25286 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ25286, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ25286 BINDING SITE, designated SEQ ID:1118, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43918] Another function of GAM3229 is therefore inhibition of FLJ25286 (Accession NP_689759.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ25286.

[43919] FLJ30656 (Accession NP_689557.1) is another GAM3229

target gene, herein designated TARGET GENE. FLJ30656 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ30656, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ30656 BINDING SITE, designated SEQ ID:11839, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43920] Another function of GAM3229 is therefore inhibition of FLJ30656 (Accession NP_689557.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ30656.

[43921] FLJ31166 (Accession NP_694567.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ31166 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ31166, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31166 BINDING SITE, designated SEQ ID:19706, to the nucleotide sequence of GAM3229 RNA, herein designated

GAM RNA, also designated SEQ ID:221.

[43922] Another function of GAM3229 is therefore inhibition of FLJ31166 (Accession NP_694567.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31166.

[43923] FLJ31821 (Accession NP_694574.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ31821 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ31821, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31821 BINDING SITE, designated SEQ ID:11267, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43924] Another function of GAM3229 is therefore inhibition of FLJ31821 (Accession NP_694574.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31821.

[43925] FLJ32096 (Accession NP_776156.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ32096

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32096, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32096 BINDING SITE, designated SEQ ID:8326, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43926] Another function of GAM3229 is therefore inhibition of FLJ32096 (Accession NP_776156.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32096.

[43927] FLJ32384 (Accession NP_653209.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ32384 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32384, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32384 BINDING SITE, designated SEQ ID:19381, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43928] Another function of GAM3229 is therefore inhibition of FLJ32384 (Accession NP_653209.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32384.

[43929] FLJ32865 (Accession NP_653214.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ32865 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32865, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32865 BINDING SITE, designated SEQ ID:16336, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43930] Another function of GAM3229 is therefore inhibition of FLJ32865 (Accession NP_653214.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32865.

[43931] FLJ32894 (Accession NP_653268.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ32894 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by FLJ32894, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32894 BINDING SITE, designated SEQ ID:18611, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43932] Another function of GAM3229 is therefore inhibition of FLJ32894 (Accession NP_653268.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32894.

[43933] FLJ33655 (Accession NP_775912.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ33655 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ33655, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ33655 BINDING SITE, designated SEQ ID:2783, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43934] Another function of GAM3229 is therefore inhibition of

FLJ33655 (Accession NP_775912.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ33655.

[43935] FLJ33768 (Accession NP_775881.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ33768 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ33768, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ33768 BINDING SITE, designated SEQ ID:1133, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43936] Another function of GAM3229 is therefore inhibition of FLJ33768 (Accession NP_775881.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ33768.

[43937] FLJ33814 (Accession NP_775781.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ33814 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ33814, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ33814 BINDING SITE, designated SEQ ID:4586, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43938] Another function of GAM3229 is therefore inhibition of FLJ33814 (Accession NP_775781.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ33814.

[43939] FLJ33860 (Accession NP_775915.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ33860 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ33860, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ33860 BINDING SITE, designated SEQ ID:2033, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43940] Another function of GAM3229 is therefore inhibition of FLJ33860 (Accession NP_775915.1) . Accordingly, utilities

of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ33860.

[43941] FLJ33918 (Accession NP_689620.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ33918 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ33918, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ33918 BINDING SITE, designated SEQ ID:3095, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43942] Another function of GAM3229 is therefore inhibition of FLJ33918 (Accession NP_689620.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ33918.

[43943] FLJ34817 (Accession NP_689516.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ34817 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ34817, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ34817 BINDING SITE, designated SEQ ID:20002, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43944] Another function of GAM3229 is therefore inhibition of FLJ34817 (Accession NP_689516.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ34817.

[43945] FLJ35487 (Accession NP_776181.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ35487 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ35487, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ35487 BINDING SITE, designated SEQ ID:7671, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43946] Another function of GAM3229 is therefore inhibition of FLJ35487 (Accession NP_776181.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ35487.

[43947] FLJ35681 (Accession NP_787096.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ35681 BINDING SITE1 and FLJ35681 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ35681, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ35681 BINDING SITE1 and FLJ35681 BINDING SITE2, designated SEQ ID:20076 and SEQ ID:14927 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43948] Another function of GAM3229 is therefore inhibition of FLJ35681 (Accession NP_787096.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ35681.

[43949] FLJ35740 (Accession NP_671728.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ35740 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ35740, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ35740 BINDING SITE, designated SEQ ID:19097, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43950] Another function of GAM3229 is therefore inhibition of FLJ35740 (Accession NP_671728.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ35740.

[43951] FLJ35848 (Accession XP_290755.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ35848 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ35848, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ35848 BINDING SITE, designated SEQ ID:4410, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43952] Another function of GAM3229 is therefore inhibition of FLJ35848 (Accession XP_290755.1) . Accordingly, utilities

of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ35848.

[43953] FLJ36032 (Accession XP_290874.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ36032 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ36032, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ36032 BINDING SITE, designated SEQ ID:6274, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43954] Another function of GAM3229 is therefore inhibition of FLJ36032 (Accession XP_290874.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ36032.

[43955] FLJ37078 (Accession NP_694588.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ37078 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ37078, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ37078 BINDING SITE, designated SEQ ID:7587, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43956] Another function of GAM3229 is therefore inhibition of FLJ37078 (Accession NP_694588.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ37078.

[43957] FLJ37433 (Accession NP_848612.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ37433 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ37433, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ37433 BINDING SITE, designated SEQ ID:10075, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43958] Another function of GAM3229 is therefore inhibition of FLJ37433 (Accession NP_848612.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ37433.

[43959] FLJ38149 (Accession XP_091919.5) is another GAM3229 target gene, herein designated TARGET GENE. FLJ38149 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ38149, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38149 BINDING SITE, designated SEQ ID:11940, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43960] Another function of GAM3229 is therefore inhibition of FLJ38149 (Accession XP_091919.5) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38149.

[43961] FLJ38281 (Accession NP_689814.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ38281 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ38281, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ38281 BINDING SITE, designated SEQ ID:1314, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43962] Another function of GAM3229 is therefore inhibition of FLJ38281 (Accession NP_689814.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38281.

[43963] FLJ38607 (Accession NP_689867.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ38607 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ38607, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38607 BINDING SITE, designated SEQ ID:11533, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43964] Another function of GAM3229 is therefore inhibition of FLJ38607 (Accession NP_689867.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ38607.

[43965] FLJ38792 (Accession NP_848615.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ38792 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ38792, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38792 BINDING SITE, designated SEQ ID:18663, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43966] Another function of GAM3229 is therefore inhibition of FLJ38792 (Accession NP_848615.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38792.

[43967] FLJ38819 (Accession NP_665872.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ38819 BINDING SITE1 and FLJ38819 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ38819, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of FLJ38819 BINDING SITE1 and FLJ38819 BINDING SITE2, designated SEQ ID:9307 and SEQ ID:1627 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43968] Another function of GAM3229 is therefore inhibition of FLJ38819 (Accession NP_665872.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38819.

[43969] FLJ38991 (Accession NP_776188.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ38991 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ38991, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38991 BINDING SITE, designated SEQ ID:12896, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43970] Another function of GAM3229 is therefore inhibition of FLJ38991 (Accession NP_776188.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ38991.

[43971] FLJ39058 (Accession NP_775851.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ39058 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ39058, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ39058 BINDING SITE, designated SEQ ID:5123, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43972] Another function of GAM3229 is therefore inhibition of FLJ39058 (Accession NP_775851.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ39058.

[43973] FLJ39426 (Accession NP_775880.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ39426 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ39426, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ39426 BINDING SITE, designated SEQ ID:16679, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43974] Another function of GAM3229 is therefore inhibition of FLJ39426 (Accession NP_775880.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ39426.

[43975] FLJ39599 (Accession NP_776164.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ39599 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ39599, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ39599 BINDING SITE, designated SEQ ID:7239, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43976] Another function of GAM3229 is therefore inhibition of FLJ39599 (Accession NP_776164.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ39599.

[43977] FLJ39639 (Accession XP_290687.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ39639 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ39639, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ39639 BINDING SITE, designated SEQ ID:2704, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43978] Another function of GAM3229 is therefore inhibition of FLJ39639 (Accession XP_290687.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ39639.

[43979] FLJ40137 (Accession NP_775749.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ40137 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ40137, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ40137 BINDING SITE, designated SEQ ID:3565, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43980] Another function of GAM3229 is therefore inhibition of FLJ40137 (Accession NP_775749.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ40137.

[43981] FLJ90119 (Accession NP_699178.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ90119 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ90119, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ90119 BINDING SITE, designated SEQ ID:1074, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43982] Another function of GAM3229 is therefore inhibition of FLJ90119 (Accession NP_699178.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ90119.

[43983] FLJ90754 (Accession NP_699197.1) is another GAM3229 target gene, herein designated TARGET GENE. FLJ90754 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ90754, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ90754 BINDING SITE, designated SEQ ID:2556, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43984] Another function of GAM3229 is therefore inhibition of FLJ90754 (Accession NP_699197.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ90754.

[43985] Fragile x mental retardation 2 (FMR2, Accession NP_002016.1) is another GAM3229 target gene, herein designated TARGET GENE. FMR2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FMR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FMR2 BINDING SITE, designated

SEQ ID:9034, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43986] Another function of GAM3229 is therefore inhibition of Fragile x mental retardation 2 (FMR2, Accession NP_002016.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FMR2.

[43987] FSD1 (Accession NP_077309.1) is another GAM3229 target gene, herein designated TARGET GENE. FSD1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FSD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FSD1 BINDING SITE, designated SEQ ID:12959, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43988] Another function of GAM3229 is therefore inhibition of FSD1 (Accession NP_077309.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FSD1.

[43989] Follistatin-like 3 (secreted glycoprotein) (FSTL3, Accession

NP_005851.1) is another GAM3229 target gene, herein designated TARGET GENE. FSTL3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FSTL3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FSTL3 BINDING SITE, designated SEQ ID:13077, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43990] Another function of GAM3229 is therefore inhibition of Follistatin-like 3 (secreted glycoprotein) (FSTL3, Accession NP_005851.1), a gene which is a member of the follistatin- module- protein family and therefore may be associated with Leukemia. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Leukemia., and of other diseases and clinical conditions associated with FSTL3.

[43991] The function of FSTL3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM523.2.Ftsj homolog 2 (e. coli) (FTSJ2, Accession NP_803191.1) is another GAM3229 target gene, herein

designated TARGET GENE. FTSJ2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FTSJ2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FTSJ2 BINDING SITE, designated SEQ ID:14535, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43992] Another function of GAM3229 is therefore inhibition of Ftsj homolog 2 (e. coli) (FTSJ2, Accession NP_803191.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FTSJ2.

[43993] Fucosyltransferase 1 (galactoside 2-alpha-l-fucosyltransferase, bombay phenotype included) (FUT1, Accession NP_000139.1) is another GAM3229 target gene, herein designated TARGET GENE. FUT1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FUT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FUT1 BINDING SITE, designated SEQ ID:13673, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43994] Another function of GAM3229 is therefore inhibition of Fucosyltransferase 1 (galactoside 2-alpha-l-fucosyltransferase, bombay phenotype included) (FUT1, Accession NP_000139.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FUT1.

[43995] Giant axonal neuropathy (gigaxonin) (GAN, Accession NP_071324.1) is another GAM3229 target gene, herein designated TARGET GENE. GAN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GAN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GAN BINDING SITE, designated SEQ ID:14322, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43996] Another function of GAM3229 is therefore inhibition of Giant axonal neuropathy (gigaxonin) (GAN, Accession

NP_071324.1), a gene which plays an important role in neurofilament architecture. and therefore may be associated with Giant axonal neuropathy 1. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Giant axonal neuropathy 1., and of other diseases and clinical conditions associated with GAN.

[43997] The function of GAN and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.GBP4 (Accession NP_443173.2) is another GAM3229 target gene, herein designated TARGET GENE. GBP4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GBP4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GBP4 BINDING SITE, designated SEQ ID:655, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[43998] Another function of GAM3229 is therefore inhibition of GBP4 (Accession NP_443173.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GBP4.

[43999] Glial fibrillary acidic protein (GFAP, Accession NP_002046.1) is another GAM3229 target gene, herein designated TARGET GENE. GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GFAP BINDING SITE, designated SEQ ID:9652, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44000] Another function of GAM3229 is therefore inhibition of Glial fibrillary acidic protein (GFAP, Accession NP_002046.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GFAP.

[44001] Glyoxalase i (GLO1, Accession NP_006699.1) is another GAM3229 target gene, herein designated TARGET GENE. GLO1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GLO1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

GLO1 BINDING SITE, designated SEQ ID:14826, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44002] Another function of GAM3229 is therefore inhibition of Glyoxalase i (GLO1, Accession NP_006699.1), a gene which converts methylglyoxal and glutathione to S- lactoylglutathione. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GLO1.

[44003] The function of GLO1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1550.1.Gm2 ganglioside activator protein (GM2A, Accession NP_000396.1) is another GAM3229 target gene, herein designated TARGET GENE. GM2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GM2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GM2A BINDING SITE, designated SEQ ID:2783, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44004] Another function of GAM3229 is therefore inhibition of Gm2 ganglioside activator protein (GM2A, Accession NP_000396.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GM2A.

[44005] GNPNAT1 (Accession XP_085119.1) is another GAM3229 target gene, herein designated TARGET GENE. GNPNAT1 BINDING SITE1 and GNPNAT1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by GNPNAT1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GNPNAT1 BINDING SITE1 and GNPNAT1 BINDING SITE2, designated SEQ ID:12484 and SEQ ID:13881 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44006] Another function of GAM3229 is therefore inhibition of GNPNAT1 (Accession XP_085119.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GNPNAT1.

[44007] GPP34R (Accession NP_060648.2) is another GAM3229

target gene, herein designated TARGET GENE. GPP34R BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GPP34R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPP34R BINDING SITE, designated SEQ ID:14018, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44008] Another function of GAM3229 is therefore inhibition of GPP34R (Accession NP_060648.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPP34R.

[44009] G protein-coupled receptor 81 (GPR81, Accession NP_115943.1) is another GAM3229 target gene, herein designated TARGET GENE. GPR81 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GPR81, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPR81 BINDING SITE, designated SEQ ID:10075, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ

ID:221.

[44010] Another function of GAM3229 is therefore inhibition of G protein-coupled receptor 81 (GPR81, Accession NP_115943.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPR81.

[44011] Glutathione peroxidase 6 (olfactory) (GPX6, Accession NP_056511.2) is another GAM3229 target gene, herein designated TARGET GENE. GPX6 BINDING SITE1 and GPX6 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by GPX6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPX6 BINDING SITE1 and GPX6 BINDING SITE2, designated SEQ ID:7367 and SEQ ID:19324 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44012] Another function of GAM3229 is therefore inhibition of Glutathione peroxidase 6 (olfactory) (GPX6, Accession NP_056511.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPX6.

[44013] GR6 (Accession NP_031380.1) is another GAM3229 target gene, herein designated TARGET GENE. GR6 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by GR6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GR6 BINDING SITE, designated SEQ ID:7906, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44014] Another function of GAM3229 is therefore inhibition of GR6 (Accession NP_031380.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GR6.

[44015] GREB1 (Accession NP_055483.2) is another GAM3229 target gene, herein designated TARGET GENE. GREB1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by GREB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GREB1 BINDING SITE, designated SEQ ID:11197, to the nucleotide sequence of GAM3229

RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44016] Another function of GAM3229 is therefore inhibition of GREB1 (Accession NP_055483.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GREB1.

[44017] Glutamate receptor, ionotropic, delta 1 (GRID1, Accession XP_043613.8) is another GAM3229 target gene, herein designated TARGET GENE. GRID1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GRID1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GRID1 BINDING SITE, designated SEQ ID:17543, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44018] Another function of GAM3229 is therefore inhibition of Glutamate receptor, ionotropic, delta 1 (GRID1, Accession XP_043613.8) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GRID1.

[44019] Glutamate receptor, ionotropic, n-methyl d-aspartate 2a

(GRIN2A, Accession NP_000824.1) is another GAM3229 target gene, herein designated TARGET GENE. GRIN2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GRIN2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GRIN2A BINDING SITE, designated SEQ ID:13819, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44020] Another function of GAM3229 is therefore inhibition of Glutamate receptor, ionotropic, n-methyl d-aspartate 2a (GRIN2A, Accession NP_000824.1), a gene which modulates the efficiency of synaptic plasticity. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GRIN2A.

[44021] The function of GRIN2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.2.Glutamate receptor, metabotropic 6 (GRM6, Accession NP_000834.1) is another GAM3229 target gene, herein designated TARGET GENE. GRM6 BINDING SITE is a

target binding site found in the 3` untranslated region of mRNA encoded by GRM6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GRM6 BINDING SITE, designated SEQ ID:12308, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44022] Another function of GAM3229 is therefore inhibition of Glutamate receptor, metabotropic 6 (GRM6, Accession NP_000834.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GRM6.

[44023] GSDM (Accession NP_835465.1) is another GAM3229 target gene, herein designated TARGET GENE. GSDM BINDING SITE1 and GSDM BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by GSDM, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GSDM BINDING SITE1 and GSDM BINDING SITE2, designated SEQ ID:10286 and SEQ ID:6398 respectively, to the nucleotide sequence of

GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44024] Another function of GAM3229 is therefore inhibition of GSDM (Accession NP_835465.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GSDM.

[44025] Hypermethylated in cancer 2 (HIC2, Accession NP_055909.1) is another GAM3229 target gene, herein designated TARGET GENE. HIC2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by HIC2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HIC2 BINDING SITE, designated SEQ ID:9438, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44026] Another function of GAM3229 is therefore inhibition of Hypermethylated in cancer 2 (HIC2, Accession NP_055909.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HIC2.

[44027] Hypermethylated in cancer 2 (HIC2, Accession

XP_036937.2) is another GAM3229 target gene, herein designated TARGET GENE. HIC2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by HIC2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HIC2 BINDING SITE, designated SEQ ID:9438, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44028] Another function of GAM3229 is therefore inhibition of Hypermethylated in cancer 2 (HIC2, Accession XP_036937.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HIC2.

[44029] HIG1 (Accession NP_054775.1) is another GAM3229 target gene, herein designated TARGET GENE. HIG1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HIG1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HIG1 BINDING SITE, designated SEQ ID:6969, to the nucleotide sequence

of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44030] Another function of GAM3229 is therefore inhibition of HIG1 (Accession NP_054775.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HIG1.

[44031] Major histocompatibility complex, class ii, do beta (HLA-DOB, Accession NP_002111.1) is another GAM3229 target gene, herein designated TARGET GENE. HLA-DOB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HLA-DOB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HLA-DOB BINDING SITE, designated SEQ ID:14561, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44032] Another function of GAM3229 is therefore inhibition of Major histocompatibility complex, class ii, do beta (HLA-DOB, Accession NP_002111.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HLA-DOB.

[44033] Homeo box b2 (HOXB2, Accession NP_002136.1) is another GAM3229 target gene, herein designated TARGET GENE. HOXB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HOXB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HOXB2 BINDING SITE, designated SEQ ID:7506, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44034] Another function of GAM3229 is therefore inhibition of Homeo box b2 (HOXB2, Accession NP_002136.1), a gene which may mediate the regulation of hematopoietic cell growth and differentiation. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HOXB2.

[44035] The function of HOXB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1990.1.Heparan sulfate (glucosamine) 3-o-sulfotransferase 5 (HS3ST5, Accession NP_705840.1) is another GAM3229 target gene, herein designated TAR-

GET GENE. HS3ST5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HS3ST5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HS3ST5 BINDING SITE, designated SEQ ID:8703, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44036] Another function of GAM3229 is therefore inhibition of Heparan sulfate (glucosamine) 3-o-sulfotransferase 5 (HS3ST5, Accession NP_705840.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HS3ST5.

[44037] HSD3B7 (Accession NP_079469.2) is another GAM3229 target gene, herein designated TARGET GENE. HSD3B7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HSD3B7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSD3B7 BINDING SITE, designated SEQ ID:15973, to the

nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44038] Another function of GAM3229 is therefore inhibition of HSD3B7 (Accession NP_079469.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSD3B7.

[44039] HSNOV1 (Accession NP_059985.2) is another GAM3229 target gene, herein designated TARGET GENE. HSNOV1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HSNOV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSNOV1 BINDING SITE, designated SEQ ID:10558, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44040] Another function of GAM3229 is therefore inhibition of HSNOV1 (Accession NP_059985.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSNOV1.

[44041] Heat shock 70kda protein 5 (glucose-regulated protein,

78kda) (HSPA5, Accession NP_005338.1) is another GAM3229 target gene, herein designated TARGET GENE. HSPA5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HSPA5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSPA5 BINDING SITE, designated SEQ ID:12356, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44042] Another function of GAM3229 is therefore inhibition of Heat shock 70kda protein 5 (glucose-regulated protein, 78kda) (HSPA5, Accession NP_005338.1), a gene which is involved in the folding and assembly of proteins in the endoplasmic reticulum (ER). Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSPA5.

[44043] The function of HSPA5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.HSPC063 (Accession NP_054874.1) is another GAM3229 target gene, herein designated TARGET GENE. HSPC063 BINDING SITE1 and HSPC063 BINDING SITE2 are

target binding sites found in untranslated regions of mRNA encoded by HSPC063, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSPC063 BINDING SITE1 and HSPC063 BINDING SITE2, designated SEQ ID:7180 and SEQ ID:5789 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44044] Another function of GAM3229 is therefore inhibition of HSPC063 (Accession NP_054874.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSPC063.

[44045] HSPC065 (Accession NP_054876.2) is another GAM3229 target gene, herein designated TARGET GENE. HSPC065 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HSPC065, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSPC065 BINDING SITE, designated SEQ ID:9903, to the nucleotide sequence of GAM3229 RNA, herein designated

GAM RNA, also designated SEQ ID:221.

[44046] Another function of GAM3229 is therefore inhibition of HSPC065 (Accession NP_054876.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSPC065.

[44047] HSRNAFEV (Accession NP_059991.1) is another GAM3229 target gene, herein designated TARGET GENE. HSRNAFEV BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HSRNAFEV, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSRNAFEV BINDING SITE, designated SEQ ID:5540, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44048] Another function of GAM3229 is therefore inhibition of HSRNAFEV (Accession NP_059991.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSRNAFEV.

[44049] HT009 (Accession NP_060940.1) is another GAM3229 target gene, herein designated TARGET GENE. HT009 BIND-

ING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HT009, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HT009 BINDING SITE, designated SEQ ID:10585, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44050] Another function of GAM3229 is therefore inhibition of HT009 (Accession NP_060940.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HT009.

[44051] HTCD37 (Accession NP_067045.1) is another GAM3229 target gene, herein designated TARGET GENE. HTCD37 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTCD37, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HTCD37 BINDING SITE, designated SEQ ID:10478, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44052] Another function of GAM3229 is therefore inhibition of

HTCD37 (Accession NP_067045.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HTCD37.

[44053] Hus1 checkpoint homolog (s. pombe) (HUS1, Accession NP_004498.1) is another GAM3229 target gene, herein designated TARGET GENE. HUS1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HUS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HUS1 BINDING SITE, designated SEQ ID:10277, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44054] Another function of GAM3229 is therefore inhibition of Hus1 checkpoint homolog (s. pombe) (HUS1, Accession NP_004498.1), a gene which May form DNA damage- responsive protein complex . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HUS1.

[44055] The function of HUS1 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM189.1.Intercellular adhesion molecule 1 (cd54), human rhinovirus receptor (ICAM1, Accession NP_000192.1) is another GAM3229 target gene, herein designated TARGET GENE. ICAM1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ICAM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ICAM1 BINDING SITE, designated SEQ ID:9491, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44056] Another function of GAM3229 is therefore inhibition of Intercellular adhesion molecule 1 (cd54), human rhinovirus receptor (ICAM1, Accession NP_000192.1), a gene which binds the integrin LFA- 1 (ITGB2) and promotes adhesion; member of the immunoglobulin superfamily and therefore may be associated with Malaria, cerebral, susceptibility to. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Malaria, cerebral, susceptibility to, and of other diseases and clinical conditions associated with ICAM1.

[44057] The function of ICAM1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Insulin-like growth factor binding protein 5 (IGFBP5, Accession NP_000590.1) is another GAM3229 target gene, herein designated TARGET GENE. IGFBP5 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IGFBP5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IGFBP5 BINDING SITE, designated SEQ ID:512, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44058] Another function of GAM3229 is therefore inhibition of Insulin-like growth factor binding protein 5 (IGFBP5, Accession NP_000590.1), a gene which either inhibits or stimulates the growth promoting effects of the igfs on cell culture. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IGFBP5.

[44059] The function of IGFBP5 has been established by previous studies. See 146733. Allander et al. (1994) cloned the

IGFBP5 gene from a human genomic library and showed that it is divided into 4 exons which, primarily due to a first intron of approximately 25 kb, span about 33 kb of DNA. Southern analysis identified a single copy of the IGFBP5 gene in the haploid human genome. By PCR amplification of DNA from somatic human/rodent cell hybrids, by fluorescence in situ hybridization, and by hybridization to pulsed field gel electrophoresis fragments, they showed that the gene is located on 2q33- q34. The IGFBP2 gene (OMIM Ref. No. 146731) and the IGFBP5 gene are transcribed convergently and are separated by approximately 20 to 40 kb of DNA. Primer extension studies identified the IGFBP5 mRNA cap site 772 bp 5- prime to the first nucleotide of the translation start codon. A potential TATA element beginning 33 bp 5- prime to the mRNA cap site was identified. When a DNA fragment containing this cap site and 461 bp of upstream sequence was placed 5-prime to the chloramphenicol acetyltransferase (CAT) reporter gene and transfected into human breast cancer cells, it directed CAT expression in an orientation- specific manner, suggesting that this region contains elements essential for IGFBP5 promoter activity. Kou et al. (1994) demonstrated that, in the mouse, Igfbp2 and

Igfbp5 colocalize to a proximal region of chromosome 1 that is syntenic with human chromosome 2q33- q36 and that the 2 genes are 5 kb apart in a tail- to- tail orientation. This suggests that the human IGFBP5 gene is located on 2q33- q36. Kou et al. (1994) also used interspecific backcross mapping and gene cloning to demonstrate that the Igfbp1 and Igfbp3 are located in the proximal part of chromosome 11. In the human genome, these 2 loci map within 20 kb of one another on 7p14- p12, and the genes are organized in a tail- to- tail configuration. The results suggested to Kou et al. (1994) an evolutionary scheme in which a primordial IGFBP gene duplicated to form a cluster that was later replicated to create a second linkage group.

[44060]

[44061] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[44062] Allander, S. V.; Larsson, C.; Ehrenborg, E.; Suwanichkul, A.; Weber, G.; Morris, S. L.; Bajalica, S.; Kiefer, M. C.; Luthman, H.; Powell, D. R. : Characterization of the chromosomal gene and promoter for human insulin- like growth factor binding protein- 5. J. Biol. Chem. 269: 10891-10898, 1994. ; and

[44063] Kou, K.; James, P. L.; Clemmons, D. R.; Copeland, N. G.; Gilbert, D. J.; Jenkins, N. A.; Rotwein, P. : Identification of two clusters of mouse insulin- like growth factor binding protein.

[44064] Further studies establishing the function and utilities of IGFBP5 are found in John Hopkins OMIM database record ID 146734, and in cited publications listed in Table 5, which are hereby incorporated by reference.Interleukin 11 (IL11, Accession NP_000632.1) is another GAM3229 target gene, herein designated TARGET GENE. IL11 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL11 BINDING SITE, designated SEQ ID:10075, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44065] Another function of GAM3229 is therefore inhibition of Interleukin 11 (IL11, Accession NP_000632.1), a gene which stimulates the proliferation of hematopoietic stem cells and megakaryocyte progenitor cells and induces megakaryocyte maturation. Accordingly, utilities of

GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL11.

[44066] The function of IL11 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM41.1.Interleukin 12 receptor, beta 1 (IL12RB1, Accession NP_714912.1) is another GAM3229 target gene, herein designated TARGET GENE. IL12RB1 BINDING SITE1 and IL12RB1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by IL12RB1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL12RB1 BINDING SITE1 and IL12RB1 BINDING SITE2, designated SEQ ID:8116 and SEQ ID:9835 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44067] Another function of GAM3229 is therefore inhibition of Interleukin 12 receptor, beta 1 (IL12RB1, Accession NP_714912.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL12RB1.

[44068] Interleukin 19 (IL19, Accession NP_037503.2) is another GAM3229 target gene, herein designated TARGET GENE. IL19 BINDING SITE1 and IL19 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by IL19, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL19 BINDING SITE1 and IL19 BINDING SITE2, designated SEQ ID:11633 and SEQ ID:14348 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44069] Another function of GAM3229 is therefore inhibition of Interleukin 19 (IL19, Accession NP_037503.2), a gene which may play a role in B- cell activation and autoantibody production. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL19.

[44070] The function of IL19 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM94.1.Interleukin 1, alpha (IL1A, Accession NP_000566.3) is another GAM3229 target gene, herein

designated TARGET GENE. IL1A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL1A BINDING SITE, designated SEQ ID:13186, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44071] Another function of GAM3229 is therefore inhibition of Interleukin 1, alpha (IL1A, Accession NP_000566.3), a gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL1A.

[44072] The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM933.1.Interleukin 8 (IL8, Accession NP_000575.1) is another GAM3229 target gene, herein designated TARGET GENE. IL8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL8,

corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL8 BINDING SITE, designated SEQ ID:16050, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44073] Another function of GAM3229 is therefore inhibition of Interleukin 8 (IL8, Accession NP_000575.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL8.

[44074] Potassium voltage-gated channel, isk-related family, member 3 (KCNE3, Accession NP_005463.1) is another GAM3229 target gene, herein designated TARGET GENE. KCNE3 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KCNE3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNE3 BINDING SITE, designated SEQ ID:19681, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44075] Another function of GAM3229 is therefore inhibition of

Potassium voltage-gated channel, isk-related family, member 3 (KCNE3, Accession NP_005463.1), a gene which ancillary protein that co- assemble with a potassium channel alpha- subunit to modulate the gating kinetics and enhance stability of the multimeric complex (by similarity). and therefore may be associated with Hypokalemic periodic paralysis. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Hypokalemic periodic paralysis, and of other diseases and clinical conditions associated with KCNE3.

[44076] The function of KCNE3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM234.1.Kinase insert domain receptor (a type iii receptor tyrosine kinase) (KDR, Accession NP_002244.1) is another GAM3229 target gene, herein designated TARGET GENE. KDR BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KDR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KDR BINDING SITE, designated SEQ ID:618, to the nucleotide sequence of GAM3229 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:221.

[44077] Another function of GAM3229 is therefore inhibition of Kinase insert domain receptor (a type iii receptor tyrosine kinase) (KDR, Accession NP_002244.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KDR.

[44078] KENAE (Accession NP_789786.1) is another GAM3229 target gene, herein designated TARGET GENE. KENAE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KENAE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KENAE BINDING SITE, designated SEQ ID:3881, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44079] Another function of GAM3229 is therefore inhibition of KENAE (Accession NP_789786.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KENAE.

[44080] Kh-type splicing regulatory protein (fuse binding protein 2) (KHSRP, Accession NP_003676.1) is another GAM3229

target gene, herein designated TARGET GENE. KHSRP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KHSRP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KHSRP BINDING SITE, designated SEQ ID:10161, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44081] Another function of GAM3229 is therefore inhibition of Kh-type splicing regulatory protein (fuse binding protein 2) (KHSRP, Accession NP_003676.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KHSRP.

[44082] KIAA0186 (Accession NP_066545.1) is another GAM3229 target gene, herein designated TARGET GENE. KIAA0186 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0186, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0186 BINDING SITE, designated SEQ ID:8187, to the nucleotide sequence of GAM3229 RNA, herein designated

GAM RNA, also designated SEQ ID:221.

[44083] Another function of GAM3229 is therefore inhibition of KIAA0186 (Accession NP_066545.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0186.

[44084] KIAA0193 (Accession NP_055581.2) is another GAM3229 target gene, herein designated TARGET GENE. KIAA0193 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0193, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0193 BINDING SITE, designated SEQ ID:9437, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44085] Another function of GAM3229 is therefore inhibition of KIAA0193 (Accession NP_055581.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0193.

[44086] KIAA0205 (Accession NP_055688.1) is another GAM3229 target gene, herein designated TARGET GENE. KIAA0205

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0205, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0205 BINDING SITE, designated SEQ ID:5448, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44087] Another function of GAM3229 is therefore inhibition of KIAA0205 (Accession NP_055688.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0205.

[44088] KIAA0280 (Accession XP_166238.1) is another GAM3229 target gene, herein designated TARGET GENE. KIAA0280 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0280, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0280 BINDING SITE, designated SEQ ID:18647, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44089] Another function of GAM3229 is therefore inhibition of KIAA0280 (Accession XP_166238.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0280.

[44090] KIAA0391 (Accession NP_055487.1) is another GAM3229 target gene, herein designated TARGET GENE. KIAA0391 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0391, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0391 BINDING SITE, designated SEQ ID:9624, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44091] Another function of GAM3229 is therefore inhibition of KIAA0391 (Accession NP_055487.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0391.

[44092] KIAA0446 (Accession XP_044155.1) is another GAM3229 target gene, herein designated TARGET GENE. KIAA0446 BINDING SITE is a target binding site found in the 5` un-

translated region of mRNA encoded by KIAA0446, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0446 BINDING SITE, designated SEQ ID:12906, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44093] Another function of GAM3229 is therefore inhibition of KIAA0446 (Accession XP_044155.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0446.

[44094] KIAA0469 (Accession NP_055666.1) is another GAM3229 target gene, herein designated TARGET GENE. KIAA0469 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0469, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0469 BINDING SITE, designated SEQ ID:5867, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44095] Another function of GAM3229 is therefore inhibition of

KIAA0469 (Accession NP_055666.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0469.

[44096] KIAA0478 (Accession NP_055685.1) is another GAM3229 target gene, herein designated TARGET GENE. KIAA0478 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0478, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0478 BINDING SITE, designated SEQ ID:6356, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44097] Another function of GAM3229 is therefore inhibition of KIAA0478 (Accession NP_055685.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0478.

[44098] KIAA0493 (Accession XP_034717.1) is another GAM3229 target gene, herein designated TARGET GENE. KIAA0493 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA0493, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0493 BINDING SITE, designated SEQ ID:13205, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44099] Another function of GAM3229 is therefore inhibition of KIAA0493 (Accession XP_034717.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0493.

[44100] KIAA0513 (Accession NP_055547.1) is another GAM3229 target gene, herein designated TARGET GENE. KIAA0513 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0513, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0513 BINDING SITE, designated SEQ ID:10075, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44101] Another function of GAM3229 is therefore inhibition of KIAA0513 (Accession NP_055547.1) . Accordingly, utilities

of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0513.

[44102] KIAA0527 (Accession XP_171054.1) is another GAM3229 target gene, herein designated TARGET GENE. KIAA0527 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0527, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0527 BINDING SITE, designated SEQ ID:9370, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44103] Another function of GAM3229 is therefore inhibition of KIAA0527 (Accession XP_171054.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0527.

[44104] KIAA0532 (Accession XP_047659.6) is another GAM3229 target gene, herein designated TARGET GENE. KIAA0532 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0532, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0532 BINDING SITE, designated SEQ ID:3516, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44105] Another function of GAM3229 is therefore inhibition of KIAA0532 (Accession XP_047659.6) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0532.

[44106] KIAA0562 (Accession NP_055519.1) is another GAM3229 target gene, herein designated TARGET GENE. KIAA0562 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0562, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0562 BINDING SITE, designated SEQ ID:3797, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44107] Another function of GAM3229 is therefore inhibition of KIAA0562 (Accession NP_055519.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with KIAA0562.

[44108] KIAA0605 (Accession NP_055509.1) is another GAM3229 target gene, herein designated TARGET GENE. KIAA0605 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA0605, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0605 BINDING SITE, designated SEQ ID:1515, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44109] Another function of GAM3229 is therefore inhibition of KIAA0605 (Accession NP_055509.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0605.

[44110] KIAA0828 (Accession NP_056143.1) is another GAM3229 target gene, herein designated TARGET GENE. KIAA0828 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0828, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of KIAA0828 BINDING SITE, designated SEQ ID:15963, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44111] Another function of GAM3229 is therefore inhibition of KIAA0828 (Accession NP_056143.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0828.

[44112] KIAA0841 (Accession XP_049237.1) is another GAM3229 target gene, herein designated TARGET GENE. KIAA0841 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0841, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0841 BINDING SITE, designated SEQ ID:4565, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44113] Another function of GAM3229 is therefore inhibition of KIAA0841 (Accession XP_049237.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

KIAA0841.

[44114] KIAA0924 (Accession NP_055712.1) is another GAM3229 target gene, herein designated TARGET GENE. KIAA0924 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0924, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0924 BINDING SITE, designated SEQ ID:7195, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44115] Another function of GAM3229 is therefore inhibition of KIAA0924 (Accession NP_055712.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0924.

[44116] KIAA0935 (Accession XP_052620.6) is another GAM3229 target gene, herein designated TARGET GENE. KIAA0935 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0935, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

KIAA0935 BINDING SITE, designated SEQ ID:12234, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44117] Another function of GAM3229 is therefore inhibition of KIAA0935 (Accession XP_052620.6) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0935.

[44118] KIAA0982 (Accession NP_054742.1) is another GAM3229 target gene, herein designated TARGET GENE. KIAA0982 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0982, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0982 BINDING SITE, designated SEQ ID:19897, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44119] Another function of GAM3229 is therefore inhibition of KIAA0982 (Accession NP_054742.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0982.

[44120] KIAA1010 (Accession XP_050742.5) is another GAM3229 target gene, herein designated TARGET GENE. KIAA1010 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1010, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1010 BINDING SITE, designated SEQ ID:845, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44121] Another function of GAM3229 is therefore inhibition of KIAA1010 (Accession XP_050742.5) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1010.

[44122] KIAA1040 (Accession XP_051091.3) is another GAM3229 target gene, herein designated TARGET GENE. KIAA1040 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1040, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1040 BINDING SITE, designated SEQ ID:11317, to the

nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44123] Another function of GAM3229 is therefore inhibition of KIAA1040 (Accession XP_051091.3) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1040.

[44124] KIAA1041 (Accession NP_055762.1) is another GAM3229 target gene, herein designated TARGET GENE. KIAA1041 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1041, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1041 BINDING SITE, designated SEQ ID:10075, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44125] Another function of GAM3229 is therefore inhibition of KIAA1041 (Accession NP_055762.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1041.

[44126] KIAA1054 (Accession XP_043493.5) is another GAM3229

target gene, herein designated TARGET GENE. KIAA1054 BINDING SITE1 and KIAA1054 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA1054, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1054 BINDING SITE1 and KIAA1054 BINDING SITE2, designated SEQ ID:4043 and SEQ ID:15902 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44127] Another function of GAM3229 is therefore inhibition of KIAA1054 (Accession XP_043493.5) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1054.

[44128] KIAA1145 (Accession NP_065749.1) is another GAM3229 target gene, herein designated TARGET GENE. KIAA1145 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1145, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

KIAA1145 BINDING SITE, designated SEQ ID:10272, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44129] Another function of GAM3229 is therefore inhibition of KIAA1145 (Accession NP_065749.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1145.

[44130] KIAA1155 (Accession XP_030864.2) is another GAM3229 target gene, herein designated TARGET GENE. KIAA1155 BINDING SITE1 and KIAA1155 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA1155, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1155 BINDING SITE1 and KIAA1155 BINDING SITE2, designated SEQ ID:9308 and SEQ ID:4896 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44131] Another function of GAM3229 is therefore inhibition of KIAA1155 (Accession XP_030864.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with KIAA1155.

[44132] KIAA1198 (Accession NP_065765.1) is another GAM3229 target gene, herein designated TARGET GENE. KIAA1198 BINDING SITE1 through KIAA1198 BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by KIAA1198, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1198 BINDING SITE1 through KIAA1198 BINDING SITE4, designated SEQ ID:4779, SEQ ID:7372, SEQ ID:1315 and SEQ ID:12313 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44133] Another function of GAM3229 is therefore inhibition of KIAA1198 (Accession NP_065765.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1198.

[44134] KIAA1200 (Accession XP_031054.4) is another GAM3229 target gene, herein designated TARGET GENE. KIAA1200 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1200, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1200 BINDING SITE, designated SEQ ID:13574, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44135] Another function of GAM3229 is therefore inhibition of KIAA1200 (Accession XP_031054.4) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1200.

[44136] KIAA1257 (Accession XP_031577.2) is another GAM3229 target gene, herein designated TARGET GENE. KIAA1257 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1257, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1257 BINDING SITE, designated SEQ ID:9371, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44137] Another function of GAM3229 is therefore inhibition of KIAA1257 (Accession XP_031577.2) . Accordingly, utilities

of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1257.

[44138] KIAA1318 (Accession NP_065820.1) is another GAM3229 target gene, herein designated TARGET GENE. KIAA1318 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1318, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1318 BINDING SITE, designated SEQ ID:1457, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44139] Another function of GAM3229 is therefore inhibition of KIAA1318 (Accession NP_065820.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1318.

[44140] KIAA1396 (Accession XP_032054.2) is another GAM3229 target gene, herein designated TARGET GENE. KIAA1396 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1396, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1396 BINDING SITE, designated SEQ ID:14141, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44141] Another function of GAM3229 is therefore inhibition of KIAA1396 (Accession XP_032054.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1396.

[44142] KIAA1493 (Accession XP_034415.1) is another GAM3229 target gene, herein designated TARGET GENE. KIAA1493 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1493, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1493 BINDING SITE, designated SEQ ID:4891, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44143] Another function of GAM3229 is therefore inhibition of KIAA1493 (Accession XP_034415.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with KIAA1493.

[44144] KIAA1571 (Accession XP_027744.1) is another GAM3229 target gene, herein designated TARGET GENE. KIAA1571 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1571, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1571 BINDING SITE, designated SEQ ID:13416, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44145] Another function of GAM3229 is therefore inhibition of KIAA1571 (Accession XP_027744.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1571.

[44146] KIAA1671 (Accession XP_037809.1) is another GAM3229 target gene, herein designated TARGET GENE. KIAA1671 BINDING SITE1 through KIAA1671 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by KIAA1671, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING

SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1671 BINDING SITE1 through KIAA1671 BINDING SITE3, designated SEQ ID:19751, SEQ ID:17241 and SEQ ID:5639 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44147] Another function of GAM3229 is therefore inhibition of KIAA1671 (Accession XP_037809.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1671.

[44148] KIAA1727 (Accession XP_034262.4) is another GAM3229 target gene, herein designated TARGET GENE. KIAA1727 BINDING SITE1 and KIAA1727 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA1727, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1727 BINDING SITE1 and KIAA1727 BINDING SITE2, designated SEQ ID:8253 and SEQ ID:7550 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44149] Another function of GAM3229 is therefore inhibition of KIAA1727 (Accession XP_034262.4) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1727.

[44150] KIAA1765 (Accession XP_047355.1) is another GAM3229 target gene, herein designated TARGET GENE. KIAA1765 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1765, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1765 BINDING SITE, designated SEQ ID:2344, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44151] Another function of GAM3229 is therefore inhibition of KIAA1765 (Accession XP_047355.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1765.

[44152] KIAA1784 (Accession NP_115820.1) is another GAM3229 target gene, herein designated TARGET GENE. KIAA1784 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by KIAA1784, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1784 BINDING SITE, designated SEQ ID:10075, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44153] Another function of GAM3229 is therefore inhibition of KIAA1784 (Accession NP_115820.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1784.

[44154] KIAA1827 (Accession XP_290834.1) is another GAM3229 target gene, herein designated TARGET GENE. KIAA1827 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1827, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1827 BINDING SITE, designated SEQ ID:10075, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44155] Another function of GAM3229 is therefore inhibition of

KIAA1827 (Accession XP_290834.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1827.

[44156] KIAA1829 (Accession XP_030378.2) is another GAM3229 target gene, herein designated TARGET GENE. KIAA1829 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1829, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1829 BINDING SITE, designated SEQ ID:15973, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44157] Another function of GAM3229 is therefore inhibition of KIAA1829 (Accession XP_030378.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1829.

[44158] KIAA1924 (Accession NP_694971.2) is another GAM3229 target gene, herein designated TARGET GENE. KIAA1924 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1924, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1924 BINDING SITE, designated SEQ ID:7589, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44159] Another function of GAM3229 is therefore inhibition of KIAA1924 (Accession NP_694971.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1924.

[44160] KIAA1971 (Accession XP_058720.4) is another GAM3229 target gene, herein designated TARGET GENE. KIAA1971 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1971, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1971 BINDING SITE, designated SEQ ID:7601, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44161] Another function of GAM3229 is therefore inhibition of KIAA1971 (Accession XP_058720.4) . Accordingly, utilities

of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1971.

[44162] KIAA1998 (Accession XP_068710.3) is another GAM3229 target gene, herein designated TARGET GENE. KIAA1998 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1998, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1998 BINDING SITE, designated SEQ ID:19071, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44163] Another function of GAM3229 is therefore inhibition of KIAA1998 (Accession XP_068710.3) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1998.

[44164] KIAA2025 (Accession XP_086409.4) is another GAM3229 target gene, herein designated TARGET GENE. KIAA2025 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA2025, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA2025 BINDING SITE, designated SEQ ID:7899, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44165] Another function of GAM3229 is therefore inhibition of KIAA2025 (Accession XP_086409.4) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA2025.

[44166] KIAA2028 (Accession XP_059415.2) is another GAM3229 target gene, herein designated TARGET GENE. KIAA2028 BINDING SITE1 through KIAA2028 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by KIAA2028, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA2028 BINDING SITE1 through KIAA2028 BINDING SITE3, designated SEQ ID:17589, SEQ ID:18073 and SEQ ID:19988 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44167] Another function of GAM3229 is therefore inhibition of

KIAA2028 (Accession XP_059415.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA2028.

[44168] Kynurenine 3-monooxygenase (kynurenine 3-hydroxylase) (KMO, Accession NP_003670.1) is another GAM3229 target gene, herein designated TARGET GENE. KMO BINDING SITE1 and KMO BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KMO, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KMO BINDING SITE1 and KMO BINDING SITE2, designated SEQ ID:9048 and SEQ ID:15859 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44169] Another function of GAM3229 is therefore inhibition of Kynurenine 3-monooxygenase (kynurenine 3-hydroxylase) (KMO, Accession NP_003670.1), a gene which may play a role in encephalic photoreception. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KMO.

[44170] The function of KMO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Keratin, hair, basic, 2 (KRTHB2, Accession NP_149022.3) is another GAM3229 target gene, herein designated TARGET GENE. KRTHB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KRTHB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KRTHB2 BINDING SITE, designated SEQ ID:12235, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44171] Another function of GAM3229 is therefore inhibition of Keratin, hair, basic, 2 (KRTHB2, Accession NP_149022.3) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KRTHB2.

[44172] Kinase suppressor of ras (KSR, Accession XP_290793.1) is another GAM3229 target gene, herein designated TARGET GENE. KSR BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KSR, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KSR BINDING SITE, designated SEQ ID:10075, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44173] Another function of GAM3229 is therefore inhibition of Kinase suppressor of ras (KSR, Accession XP_290793.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KSR.

[44174] Lysosomal-associated membrane protein 3 (LAMP3, Accession NP_055213.1) is another GAM3229 target gene, herein designated TARGET GENE. LAMP3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LAMP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LAMP3 BINDING SITE, designated SEQ ID:3841, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44175] Another function of GAM3229 is therefore inhibition of

Lysosomal-associated membrane protein 3 (LAMP3, Accession NP_055213.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LAMP3.

[44176] LAT1-3TM (Accession NP_112488.1) is another GAM3229 target gene, herein designated TARGET GENE. LAT1-3TM BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LAT1-3TM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LAT1-3TM BINDING SITE, designated SEQ ID:13820, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44177] Another function of GAM3229 is therefore inhibition of LAT1-3TM (Accession NP_112488.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LAT1-3TM.

[44178] Lipocalin 7 (LCN7, Accession NP_071447.1) is another GAM3229 target gene, herein designated TARGET GENE. LCN7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LCN7, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LCN7 BINDING SITE, designated SEQ ID:7234, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44179] Another function of GAM3229 is therefore inhibition of Lipocalin 7 (LCN7, Accession NP_071447.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LCN7.

[44180] Lim homeobox protein 3 (LHX3, Accession NP_055379.1) is another GAM3229 target gene, herein designated TARGET GENE. LHX3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LHX3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LHX3 BINDING SITE, designated SEQ ID:20146, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44181] Another function of GAM3229 is therefore inhibition of

Lim homeobox protein 3 (LHX3, Accession NP_055379.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LHX3.

[44182] Leukemia inhibitory factor (cholinergic differentiation factor) (LIF, Accession NP_002300.1) is another GAM3229 target gene, herein designated TARGET GENE. LIF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LIF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LIF BINDING SITE, designated SEQ ID:4988, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44183] Another function of GAM3229 is therefore inhibition of Leukemia inhibitory factor (cholinergic differentiation factor) (LIF, Accession NP_002300.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LIF.

[44184] LNIR (Accession NP_112178.1) is another GAM3229 target gene, herein designated TARGET GENE. LNIR BINDING SITE is a target binding site found in the 3` untranslated re-

gion of mRNA encoded by LNIR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LNIR BINDING SITE, designated SEQ ID:6798, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44185] Another function of GAM3229 is therefore inhibition of LNIR (Accession NP_112178.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LNIR.

[44186] LOC112687 (Accession XP_053145.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC112687 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC112687, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC112687 BINDING SITE, designated SEQ ID:10726, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44187] Another function of GAM3229 is therefore inhibition of

LOC112687 (Accession XP_053145.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC112687.

[44188] LOC115098 (Accession NP_612451.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC115098 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC115098, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC115098 BINDING SITE, designated SEQ ID:15832, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44189] Another function of GAM3229 is therefore inhibition of LOC115098 (Accession NP_612451.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC115098.

[44190] LOC115219 (Accession XP_055499.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC115219 BINDING SITE is a target binding site found in

the 5` untranslated region of mRNA encoded by LOC115219, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC115219 BINDING SITE, designated SEQ ID:12851, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44191] Another function of GAM3229 is therefore inhibition of LOC115219 (Accession XP_055499.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC115219.

[44192] LOC117584 (Accession NP_476519.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC117584 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC117584, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC117584 BINDING SITE, designated SEQ ID:3964, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:221.

[44193] Another function of GAM3229 is therefore inhibition of LOC117584 (Accession NP_476519.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC117584.

[44194] LOC118812 (Accession XP_058346.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC118812 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LOC118812, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC118812 BINDING SITE, designated SEQ ID:16805, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44195] Another function of GAM3229 is therefore inhibition of LOC118812 (Accession XP_058346.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC118812.

[44196] LOC118812 (Accession NP_849154.1) is another

GAM3229 target gene, herein designated TARGET GENE. LOC118812 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LOC118812, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC118812 BINDING SITE, designated SEQ ID:16805, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44197] Another function of GAM3229 is therefore inhibition of LOC118812 (Accession NP_849154.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC118812.

[44198] LOC119392 (Accession NP_660290.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC119392 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC119392, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC119392 BINDING SITE, desig-

nated SEQ ID:9142, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44199] Another function of GAM3229 is therefore inhibition of LOC119392 (Accession NP_660290.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC119392.

[44200] LOC120526 (Accession XP_058475.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC120526 BINDING SITE1 and LOC120526 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC120526, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC120526 BINDING SITE1 and LOC120526 BINDING SITE2, designated SEQ ID:10538 and SEQ ID:2073 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44201] Another function of GAM3229 is therefore inhibition of LOC120526 (Accession XP_058475.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC120526.

[44202] LOC121838 (Accession XP_071772.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC121838 BINDING SITE1 and LOC121838 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC121838, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC121838 BINDING SITE1 and LOC121838 BINDING SITE2, designated SEQ ID:14349 and SEQ ID:1458 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44203] Another function of GAM3229 is therefore inhibition of LOC121838 (Accession XP_071772.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC121838.

[44204] LOC125061 (Accession XP_058889.3) is another GAM3229 target gene, herein designated TARGET GENE. LOC125061 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

LOC125061, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC125061 BINDING SITE, designated SEQ ID:10075, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44205] Another function of GAM3229 is therefore inhibition of LOC125061 (Accession XP_058889.3) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC125061.

[44206] LOC126669 (Accession XP_060121.4) is another GAM3229 target gene, herein designated TARGET GENE. LOC126669 BINDING SITE1 and LOC126669 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC126669, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC126669 BINDING SITE1 and LOC126669 BINDING SITE2, designated SEQ ID:13284 and SEQ ID:11629 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated

GAM RNA, also designated SEQ ID:221.

[44207] Another function of GAM3229 is therefore inhibition of LOC126669 (Accession XP_060121.4) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC126669.

[44208] LOC130639 (Accession XP_059464.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC130639 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC130639, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC130639 BINDING SITE, designated SEQ ID:13129, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44209] Another function of GAM3229 is therefore inhibition of LOC130639 (Accession XP_059464.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC130639.

[44210] LOC130813 (Accession XP_065904.1) is another

GAM3229 target gene, herein designated TARGET GENE. LOC130813 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC130813, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC130813 BINDING SITE, designated SEQ ID:12421, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44211] Another function of GAM3229 is therefore inhibition of LOC130813 (Accession XP_065904.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC130813.

[44212] LOC132241 (Accession XP_059583.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC132241 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC132241, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC132241 BINDING SITE, desig-

nated SEQ ID:15759, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44213] Another function of GAM3229 is therefore inhibition of LOC132241 (Accession XP_059583.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC132241.

[44214] LOC135293 (Accession XP_072402.4) is another GAM3229 target gene, herein designated TARGET GENE. LOC135293 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC135293, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC135293 BINDING SITE, designated SEQ ID:12656, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44215] Another function of GAM3229 is therefore inhibition of LOC135293 (Accession XP_072402.4) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC135293.

[44216] LOC135818 (Accession XP_059804.4) is another GAM3229 target gene, herein designated TARGET GENE. LOC135818 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC135818, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC135818 BINDING SITE, designated SEQ ID:19721, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44217] Another function of GAM3229 is therefore inhibition of LOC135818 (Accession XP_059804.4) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC135818.

[44218] LOC136345 (Accession XP_072455.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC136345 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC136345, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC136345 BINDING SITE, designated SEQ ID:6455, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44219] Another function of GAM3229 is therefore inhibition of LOC136345 (Accession XP_072455.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC136345.

[44220] LOC137886 (Accession XP_059929.3) is another GAM3229 target gene, herein designated TARGET GENE. LOC137886 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC137886, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC137886 BINDING SITE, designated SEQ ID:9666, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44221] Another function of GAM3229 is therefore inhibition of LOC137886 (Accession XP_059929.3) . Accordingly, utili-

ties of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC137886.

[44222] LOC139422 (Accession XP_066687.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC139422 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC139422, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC139422 BINDING SITE, designated SEQ ID:16130, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44223] Another function of GAM3229 is therefore inhibition of LOC139422 (Accession XP_066687.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC139422.

[44224] LOC143677 (Accession XP_096471.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC143677 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by

LOC143677, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC143677 BINDING SITE, designated SEQ ID:14289, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44225] Another function of GAM3229 is therefore inhibition of LOC143677 (Accession XP_096471.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC143677.

[44226] LOC144404 (Accession XP_084852.6) is another GAM3229 target gene, herein designated TARGET GENE. LOC144404 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC144404, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144404 BINDING SITE, designated SEQ ID:19677, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44227] Another function of GAM3229 is therefore inhibition of LOC144404 (Accession XP_084852.6) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144404.

[44228] LOC144481 (Accession XP_096611.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC144481 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC144481, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144481 BINDING SITE, designated SEQ ID:3550, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44229] Another function of GAM3229 is therefore inhibition of LOC144481 (Accession XP_096611.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144481.

[44230] LOC144871 (Accession XP_096698.1) is another GAM3229 target gene, herein designated TARGET GENE.

LOC144871 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC144871, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144871 BINDING SITE, designated SEQ ID:15802, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44231] Another function of GAM3229 is therefore inhibition of LOC144871 (Accession XP_096698.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144871.

[44232] LOC145188 (Accession XP_085049.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC145188 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC145188, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145188 BINDING SITE, designated SEQ ID:15484, to the nucleotide sequence of

GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44233] Another function of GAM3229 is therefore inhibition of LOC145188 (Accession XP_085049.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145188.

[44234] LOC145268 (Accession XP_085072.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC145268 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC145268, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145268 BINDING SITE, designated SEQ ID:10524, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44235] Another function of GAM3229 is therefore inhibition of LOC145268 (Accession XP_085072.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145268.

[44236] LOC145387 (Accession XP_096791.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC145387 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC145387, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145387 BINDING SITE, designated SEQ ID:12820, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44237] Another function of GAM3229 is therefore inhibition of LOC145387 (Accession XP_096791.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145387.

[44238] LOC145601 (Accession XP_096816.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC145601 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC145601, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC145601 BINDING SITE, designated SEQ ID:10802, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44239] Another function of GAM3229 is therefore inhibition of LOC145601 (Accession XP_096816.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145601.

[44240] LOC145988 (Accession XP_085290.3) is another GAM3229 target gene, herein designated TARGET GENE. LOC145988 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC145988, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145988 BINDING SITE, designated SEQ ID:15535, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44241] Another function of GAM3229 is therefore inhibition of LOC145988 (Accession XP_085290.3) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC145988.

[44242] LOC146229 (Accession XP_085387.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC146229 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC146229, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146229 BINDING SITE, designated SEQ ID:15411, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44243] Another function of GAM3229 is therefore inhibition of LOC146229 (Accession XP_085387.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146229.

[44244] LOC146336 (Accession XP_085421.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC146336 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC146336, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146336 BINDING SITE, designated SEQ ID:5123, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44245] Another function of GAM3229 is therefore inhibition of LOC146336 (Accession XP_085421.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146336.

[44246] LOC146346 (Accession XP_085430.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC146346 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC146346, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146346 BINDING SITE, designated SEQ ID:3401, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44247] Another function of GAM3229 is therefore inhibition of

LOC146346 (Accession XP_085430.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146346.

[44248] LOC146443 (Accession XP_085461.6) is another GAM3229 target gene, herein designated TARGET GENE. LOC146443 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC146443, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146443 BINDING SITE, designated SEQ ID:9729, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44249] Another function of GAM3229 is therefore inhibition of LOC146443 (Accession XP_085461.6) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146443.

[44250] LOC146713 (Accession XP_097071.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC146713 BINDING SITE is a target binding site found in

the 3` untranslated region of mRNA encoded by LOC146713, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146713 BINDING SITE, designated SEQ ID:19578, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44251] Another function of GAM3229 is therefore inhibition of LOC146713 (Accession XP_097071.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146713.

[44252] LOC146850 (Accession XP_097109.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC146850 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC146850, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146850 BINDING SITE, designated SEQ ID:15412, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:221.

[44253] Another function of GAM3229 is therefore inhibition of LOC146850 (Accession XP_097109.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146850.

[44254] LOC146909 (Accession XP_085634.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC146909 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC146909, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146909 BINDING SITE, designated SEQ ID:11082, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44255] Another function of GAM3229 is therefore inhibition of LOC146909 (Accession XP_085634.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146909.

[44256] LOC147004 (Accession XP_097155.1) is another

GAM3229 target gene, herein designated TARGET GENE. LOC147004 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC147004, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147004 BINDING SITE, designated SEQ ID:11470, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44257] Another function of GAM3229 is therefore inhibition of LOC147004 (Accession XP_097155.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147004.

[44258] LOC147166 (Accession XP_085722.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC147166 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC147166, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147166 BINDING SITE, desig-

nated SEQ ID:14800, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44259] Another function of GAM3229 is therefore inhibition of LOC147166 (Accession XP_085722.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147166.

[44260] LOC147343 (Accession XP_097225.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC147343 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC147343, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147343 BINDING SITE, designated SEQ ID:7551, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44261] Another function of GAM3229 is therefore inhibition of LOC147343 (Accession XP_097225.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC147343.

[44262] LOC147817 (Accession XP_085903.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC147817 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC147817, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147817 BINDING SITE, designated SEQ ID:5287, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44263] Another function of GAM3229 is therefore inhibition of LOC147817 (Accession XP_085903.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147817.

[44264] LOC147947 (Accession XP_085974.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC147947 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC147947, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147947 BINDING SITE, designated SEQ ID:4263, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44265] Another function of GAM3229 is therefore inhibition of LOC147947 (Accession XP_085974.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147947.

[44266] LOC148203 (Accession XP_086095.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC148203 BINDING SITE1 and LOC148203 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC148203, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC148203 BINDING SITE1 and LOC148203 BINDING SITE2, designated SEQ ID:18261 and SEQ ID:6399 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44267] Another function of GAM3229 is therefore inhibition of

LOC148203 (Accession XP_086095.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148203.

[44268] LOC148709 (Accession XP_086281.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC148709 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC148709, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC148709 BINDING SITE, designated SEQ ID:6483, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44269] Another function of GAM3229 is therefore inhibition of LOC148709 (Accession XP_086281.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148709.

[44270] LOC148918 (Accession XP_086361.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC148918 BINDING SITE1 and LOC148918 BINDING

SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC148918, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC148918 BINDING SITE1 and LOC148918 BINDING SITE2, designated SEQ ID:7157 and SEQ ID:15411 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44271] Another function of GAM3229 is therefore inhibition of LOC148918 (Accession XP_086361.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148918.

[44272] LOC149149 (Accession XP_097598.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC149149 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC149149, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149149 BINDING SITE, designated SEQ ID:4780, to the nucleotide sequence of

GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44273] Another function of GAM3229 is therefore inhibition of LOC149149 (Accession XP_097598.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149149.

[44274] LOC149371 (Accession NP_787072.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC149371 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC149371, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149371 BINDING SITE, designated SEQ ID:4008, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44275] Another function of GAM3229 is therefore inhibition of LOC149371 (Accession NP_787072.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149371.

[44276] LOC149466 (Accession XP_086546.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC149466 BINDING SITE1 and LOC149466 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC149466, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149466 BINDING SITE1 and LOC149466 BINDING SITE2, designated SEQ ID:10865 and SEQ ID:12245 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44277] Another function of GAM3229 is therefore inhibition of LOC149466 (Accession XP_086546.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149466.

[44278] LOC149670 (Accession XP_086647.4) is another GAM3229 target gene, herein designated TARGET GENE. LOC149670 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC149670, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149670 BINDING SITE, designated SEQ ID:10537, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44279] Another function of GAM3229 is therefore inhibition of LOC149670 (Accession XP_086647.4) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149670.

[44280] LOC149692 (Accession XP_097706.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC149692 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC149692, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149692 BINDING SITE, designated SEQ ID:619, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44281] Another function of GAM3229 is therefore inhibition of LOC149692 (Accession XP_097706.1) . Accordingly, utili-

ties of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149692.

[44282] LOC149821 (Accession XP_097751.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC149821 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC149821, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149821 BINDING SITE, designated SEQ ID:7976, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44283] Another function of GAM3229 is therefore inhibition of LOC149821 (Accession XP_097751.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149821.

[44284] LOC150166 (Accession XP_097824.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC150166 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by

LOC150166, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150166 BINDING SITE, designated SEQ ID:2705, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44285] Another function of GAM3229 is therefore inhibition of LOC150166 (Accession XP_097824.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150166.

[44286] LOC150407 (Accession XP_086906.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC150407 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC150407, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150407 BINDING SITE, designated SEQ ID:7746, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44287] Another function of GAM3229 is therefore inhibition of LOC150407 (Accession XP_086906.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150407.

[44288] LOC150587 (Accession XP_097917.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC150587 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC150587, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150587 BINDING SITE, designated SEQ ID:6798, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44289] Another function of GAM3229 is therefore inhibition of LOC150587 (Accession XP_097917.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150587.

[44290] LOC150946 (Accession XP_097977.2) is another GAM3229 target gene, herein designated TARGET GENE.

LOC150946 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC150946, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150946 BINDING SITE, designated SEQ ID:13021, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44291] Another function of GAM3229 is therefore inhibition of LOC150946 (Accession XP_097977.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150946.

[44292] LOC151196 (Accession XP_098019.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC151196 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC151196, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151196 BINDING SITE, designated SEQ ID:2041, to the nucleotide sequence of

GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44293] Another function of GAM3229 is therefore inhibition of LOC151196 (Accession XP_098019.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151196.

[44294] LOC151201 (Accession XP_098021.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC151201 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC151201, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151201 BINDING SITE, designated SEQ ID:2056, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44295] Another function of GAM3229 is therefore inhibition of LOC151201 (Accession XP_098021.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151201.

[44296] LOC151636 (Accession NP_612144.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC151636 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC151636, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151636 BINDING SITE, designated SEQ ID:15373, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44297] Another function of GAM3229 is therefore inhibition of LOC151636 (Accession NP_612144.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151636.

[44298] LOC151657 (Accession XP_098100.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC151657 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC151657, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC151657 BINDING SITE, designated SEQ ID:12136, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44299] Another function of GAM3229 is therefore inhibition of LOC151657 (Accession XP_098100.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151657.

[44300] LOC152445 (Accession XP_098231.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC152445 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC152445, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152445 BINDING SITE, designated SEQ ID:10071, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44301] Another function of GAM3229 is therefore inhibition of LOC152445 (Accession XP_098231.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC152445.

[44302] LOC152620 (Accession XP_011108.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC152620 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC152620, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152620 BINDING SITE, designated SEQ ID:10075, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44303] Another function of GAM3229 is therefore inhibition of LOC152620 (Accession XP_011108.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152620.

[44304] LOC152719 (Accession XP_098257.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC152719 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC152719, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152719 BINDING SITE, designated SEQ ID:10075, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44305] Another function of GAM3229 is therefore inhibition of LOC152719 (Accession XP_098257.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152719.

[44306] LOC152804 (Accession XP_098266.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC152804 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC152804, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152804 BINDING SITE, designated SEQ ID:6723, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44307] Another function of GAM3229 is therefore inhibition of

LOC152804 (Accession XP_098266.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152804.

[44308] LOC153139 (Accession XP_098318.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC153139 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC153139, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC153139 BINDING SITE, designated SEQ ID:4758, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44309] Another function of GAM3229 is therefore inhibition of LOC153139 (Accession XP_098318.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153139.

[44310] LOC154184 (Accession XP_098488.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC154184 BINDING SITE is a target binding site found in

the 5` untranslated region of mRNA encoded by LOC154184, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC154184 BINDING SITE, designated SEQ ID:4758, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44311] Another function of GAM3229 is therefore inhibition of LOC154184 (Accession XP_098488.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC154184.

[44312] LOC154282 (Accession XP_098505.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC154282 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC154282, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC154282 BINDING SITE, designated SEQ ID:18644, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:221.

[44313] Another function of GAM3229 is therefore inhibition of LOC154282 (Accession XP_098505.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC154282.

[44314] LOC154822 (Accession XP_098618.3) is another GAM3229 target gene, herein designated TARGET GENE. LOC154822 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC154822, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC154822 BINDING SITE, designated SEQ ID:1820, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44315] Another function of GAM3229 is therefore inhibition of LOC154822 (Accession XP_098618.3) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC154822.

[44316] LOC154877 (Accession XP_098626.1) is another

GAM3229 target gene, herein designated TARGET GENE. LOC154877 BINDING SITE1 and LOC154877 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC154877, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC154877 BINDING SITE1 and LOC154877 BINDING SITE2, designated SEQ ID:14674 and SEQ ID:10615 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44317] Another function of GAM3229 is therefore inhibition of LOC154877 (Accession XP_098626.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC154877.

[44318] LOC155032 (Accession XP_098647.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC155032 BINDING SITE1 and LOC155032 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC155032, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the com-

plementarity of the nucleotide sequences of LOC155032 BINDING SITE1 and LOC155032 BINDING SITE2, designated SEQ ID:6455 and SEQ ID:16924 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44319] Another function of GAM3229 is therefore inhibition of LOC155032 (Accession XP_098647.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC155032.

[44320] LOC157226 (Accession XP_033876.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC157226 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC157226, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC157226 BINDING SITE, designated SEQ ID:5282, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44321] Another function of GAM3229 is therefore inhibition of LOC157226 (Accession XP_033876.1) . Accordingly, utili-

ties of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157226.

[44322] LOC158014 (Accession XP_088442.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC158014 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC158014, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158014 BINDING SITE, designated SEQ ID:16148, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44323] Another function of GAM3229 is therefore inhibition of LOC158014 (Accession XP_088442.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158014.

[44324] LOC158257 (Accession XP_098908.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC158257 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by

LOC158257, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158257 BINDING SITE, designated SEQ ID:19341, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44325] Another function of GAM3229 is therefore inhibition of LOC158257 (Accession XP_098908.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158257.

[44326] LOC158373 (Accession XP_048539.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC158373 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC158373, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158373 BINDING SITE, designated SEQ ID:18514, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44327] Another function of GAM3229 is therefore inhibition of LOC158373 (Accession XP_048539.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158373.

[44328] LOC158402 (Accession XP_098936.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC158402 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC158402, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158402 BINDING SITE, designated SEQ ID:2018, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44329] Another function of GAM3229 is therefore inhibition of LOC158402 (Accession XP_098936.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158402.

[44330] LOC158476 (Accession XP_098955.1) is another GAM3229 target gene, herein designated TARGET GENE.

LOC158476 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC158476, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158476 BINDING SITE, designated SEQ ID:6246, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44331] Another function of GAM3229 is therefore inhibition of LOC158476 (Accession XP_098955.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158476.

[44332] LOC158563 (Accession XP_088606.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC158563 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC158563, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158563 BINDING SITE, designated SEQ ID:9836, to the nucleotide sequence of

GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44333] Another function of GAM3229 is therefore inhibition of LOC158563 (Accession XP_088606.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158563.

[44334] LOC158865 (Accession XP_099000.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC158865 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC158865, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158865 BINDING SITE, designated SEQ ID:1389, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44335] Another function of GAM3229 is therefore inhibition of LOC158865 (Accession XP_099000.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158865.

[44336] LOC161145 (Accession XP_101622.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC161145 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC161145, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC161145 BINDING SITE, designated SEQ ID:10075, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44337] Another function of GAM3229 is therefore inhibition of LOC161145 (Accession XP_101622.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC161145.

[44338] LOC162967 (Accession XP_091890.6) is another GAM3229 target gene, herein designated TARGET GENE. LOC162967 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC162967, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC162967 BINDING SITE, designated SEQ ID:18580, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44339] Another function of GAM3229 is therefore inhibition of LOC162967 (Accession XP_091890.6) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC162967.

[44340] LOC163227 (Accession NP_775802.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC163227 BINDING SITE1 and LOC163227 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC163227, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC163227 BINDING SITE1 and LOC163227 BINDING SITE2, designated SEQ ID:19173 and SEQ ID:8466 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44341] Another function of GAM3229 is therefore inhibition of LOC163227 (Accession NP_775802.1) . Accordingly, utili-

ties of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC163227.

[44342] LOC163590 (Accession NP_659471.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC163590 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC163590, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC163590 BINDING SITE, designated SEQ ID:2345, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44343] Another function of GAM3229 is therefore inhibition of LOC163590 (Accession NP_659471.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC163590.

[44344] LOC164153 (Accession XP_089415.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC164153 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

LOC164153, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC164153 BINDING SITE, designated SEQ ID:17694, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44345] Another function of GAM3229 is therefore inhibition of LOC164153 (Accession XP_089415.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC164153.

[44346] LOC196214 (Accession XP_116897.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC196214 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC196214, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC196214 BINDING SITE, designated SEQ ID:12821, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44347] Another function of GAM3229 is therefore inhibition of LOC196214 (Accession XP_116897.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC196214.

[44348] LOC196463 (Accession NP_775813.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC196463 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC196463, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC196463 BINDING SITE, designated SEQ ID:10525, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44349] Another function of GAM3229 is therefore inhibition of LOC196463 (Accession NP_775813.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC196463.

[44350] LOC197358 (Accession XP_113872.2) is another GAM3229 target gene, herein designated TARGET GENE.

LOC197358 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC197358, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC197358 BINDING SITE, designated SEQ ID:8630, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44351] Another function of GAM3229 is therefore inhibition of LOC197358 (Accession XP_113872.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC197358.

[44352] LOC199899 (Accession XP_117153.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC199899 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC199899, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC199899 BINDING SITE, designated SEQ ID:940, to the nucleotide sequence of

GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44353] Another function of GAM3229 is therefore inhibition of LOC199899 (Accession XP_117153.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC199899.

[44354] LOC200860 (Accession XP_117289.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC200860 BINDING SITE1 and LOC200860 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC200860, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC200860 BINDING SITE1 and LOC200860 BINDING SITE2, designated SEQ ID:6951 and SEQ ID:18373 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44355] Another function of GAM3229 is therefore inhibition of LOC200860 (Accession XP_117289.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC200860.

[44356] LOC200895 (Accession NP_789785.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC200895 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC200895, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC200895 BINDING SITE, designated SEQ ID:13587, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44357] Another function of GAM3229 is therefore inhibition of LOC200895 (Accession NP_789785.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC200895.

[44358] LOC200916 (Accession XP_114317.3) is another GAM3229 target gene, herein designated TARGET GENE. LOC200916 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC200916, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC200916 BINDING SITE, designated SEQ ID:5449, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44359] Another function of GAM3229 is therefore inhibition of LOC200916 (Accession XP_114317.3) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC200916.

[44360] LOC201292 (Accession NP_775818.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC201292 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC201292, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC201292 BINDING SITE, designated SEQ ID:11829, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44361] Another function of GAM3229 is therefore inhibition of LOC201292 (Accession NP_775818.1) . Accordingly, utili-

ties of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201292.

[44362] LOC201868 (Accession XP_114393.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC201868 BINDING SITE1 and LOC201868 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC201868, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC201868 BINDING SITE1 and LOC201868 BINDING SITE2, designated SEQ ID:542 and SEQ ID:7507 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44363] Another function of GAM3229 is therefore inhibition of LOC201868 (Accession XP_114393.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201868.

[44364] LOC202459 (Accession NP_660346.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC202459 BINDING SITE is a target binding site found in

the 5` untranslated region of mRNA encoded by LOC202459, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC202459 BINDING SITE, designated SEQ ID:4939, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44365] Another function of GAM3229 is therefore inhibition of LOC202459 (Accession NP_660346.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC202459.

[44366] LOC202934 (Accession XP_117486.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC202934 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC202934, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC202934 BINDING SITE, designated SEQ ID:6398, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:221.

[44367] Another function of GAM3229 is therefore inhibition of LOC202934 (Accession XP_117486.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC202934.

[44368] LOC203547 (Accession XP_114719.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC203547 BINDING SITE1 and LOC203547 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC203547, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC203547 BINDING SITE1 and LOC203547 BINDING SITE2, designated SEQ ID:828 and SEQ ID:17521 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44369] Another function of GAM3229 is therefore inhibition of LOC203547 (Accession XP_114719.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC203547.

[44370] LOC219293 (Accession XP_166599.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC219293 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC219293, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC219293 BINDING SITE, designated SEQ ID:14079, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44371] Another function of GAM3229 is therefore inhibition of LOC219293 (Accession XP_166599.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC219293.

[44372] LOC219731 (Accession XP_167596.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC219731 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC219731, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC219731 BINDING SITE, designated SEQ ID:4505, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44373] Another function of GAM3229 is therefore inhibition of LOC219731 (Accession XP_167596.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC219731.

[44374] LOC220074 (Accession NP_660352.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC220074 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC220074, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC220074 BINDING SITE, designated SEQ ID:9729, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44375] Another function of GAM3229 is therefore inhibition of LOC220074 (Accession NP_660352.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC220074.

[44376] LOC220980 (Accession XP_167629.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC220980 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC220980, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC220980 BINDING SITE, designated SEQ ID:4661, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44377] Another function of GAM3229 is therefore inhibition of LOC220980 (Accession XP_167629.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC220980.

[44378] LOC221405 (Accession XP_168138.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC221405 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC221405, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221405 BINDING SITE, designated SEQ ID:14485, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44379] Another function of GAM3229 is therefore inhibition of LOC221405 (Accession XP_168138.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221405.

[44380] LOC221601 (Accession XP_168071.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC221601 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC221601, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221601 BINDING SITE, designated SEQ ID:4758, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44381] Another function of GAM3229 is therefore inhibition of

LOC221601 (Accession XP_168071.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221601.

[44382] LOC221663 (Accession XP_168131.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC221663 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC221663, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221663 BINDING SITE, designated SEQ ID:4068, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44383] Another function of GAM3229 is therefore inhibition of LOC221663 (Accession XP_168131.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221663.

[44384] LOC221946 (Accession XP_168340.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC221946 BINDING SITE is a target binding site found in

the 3` untranslated region of mRNA encoded by LOC221946, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221946 BINDING SITE, designated SEQ ID:17132, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44385] Another function of GAM3229 is therefore inhibition of LOC221946 (Accession XP_168340.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221946.

[44386] LOC221960 (Accession XP_165859.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC221960 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC221960, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221960 BINDING SITE, designated SEQ ID:3459, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:221.

[44387] Another function of GAM3229 is therefore inhibition of LOC221960 (Accession XP_165859.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221960.

[44388] LOC222057 (Accession XP_166594.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC222057 BINDING SITE1 and LOC222057 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC222057, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC222057 BINDING SITE1 and LOC222057 BINDING SITE2, designated SEQ ID:8135 and SEQ ID:9877 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44389] Another function of GAM3229 is therefore inhibition of LOC222057 (Accession XP_166594.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC222057.

[44390] LOC222224 (Accession XP_168473.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC222224 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC222224, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC222224 BINDING SITE, designated SEQ ID:18096, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44391] Another function of GAM3229 is therefore inhibition of LOC222224 (Accession XP_168473.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC222224.

[44392] LOC252983 (Accession XP_170858.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC252983 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC252983, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC252983 BINDING SITE, designated SEQ ID:17884, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44393] Another function of GAM3229 is therefore inhibition of LOC252983 (Accession XP_170858.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC252983.

[44394] LOC255131 (Accession XP_171131.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC255131 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC255131, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC255131 BINDING SITE, designated SEQ ID:1329, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44395] Another function of GAM3229 is therefore inhibition of LOC255131 (Accession XP_171131.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC255131.

[44396] LOC255338 (Accession XP_171105.3) is another GAM3229 target gene, herein designated TARGET GENE. LOC255338 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC255338, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC255338 BINDING SITE, designated SEQ ID:10003, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44397] Another function of GAM3229 is therefore inhibition of LOC255338 (Accession XP_171105.3) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255338.

[44398] LOC255458 (Accession XP_173150.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC255458 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC255458, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC255458 BINDING SITE, designated SEQ ID:5123, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44399] Another function of GAM3229 is therefore inhibition of LOC255458 (Accession XP_173150.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255458.

[44400] LOC255975 (Accession XP_171083.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC255975 BINDING SITE1 and LOC255975 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC255975, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC255975 BINDING SITE1 and LOC255975 BINDING SITE2, designated SEQ ID:829 and SEQ ID:8135 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44401] Another function of GAM3229 is therefore inhibition of LOC255975 (Accession XP_171083.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255975.

[44402] LOC256614 (Accession XP_172864.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC256614 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC256614, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC256614 BINDING SITE, designated SEQ ID:14850, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44403] Another function of GAM3229 is therefore inhibition of LOC256614 (Accession XP_172864.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC256614.

[44404] LOC282919 (Accession XP_212607.1) is another GAM3229 target gene, herein designated TARGET GENE.

LOC282919 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC282919, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282919 BINDING SITE, designated SEQ ID:9471, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44405] Another function of GAM3229 is therefore inhibition of LOC282919 (Accession XP_212607.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282919.

[44406] LOC282956 (Accession XP_212649.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC282956 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC282956, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282956 BINDING SITE, designated SEQ ID:9471, to the nucleotide sequence of

GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44407] Another function of GAM3229 is therefore inhibition of LOC282956 (Accession XP_212649.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282956.

[44408] LOC282980 (Accession XP_210840.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC282980 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC282980, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282980 BINDING SITE, designated SEQ ID:3959, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44409] Another function of GAM3229 is therefore inhibition of LOC282980 (Accession XP_210840.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282980.

[44410] LOC282997 (Accession XP_208473.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC282997 BINDING SITE1 and LOC282997 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC282997, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282997 BINDING SITE1 and LOC282997 BINDING SITE2, designated SEQ ID:18319 and SEQ ID:3573 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44411] Another function of GAM3229 is therefore inhibition of LOC282997 (Accession XP_208473.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282997.

[44412] LOC283031 (Accession XP_210859.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC283031 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283031, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283031 BINDING SITE, designated SEQ ID:7798, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44413] Another function of GAM3229 is therefore inhibition of LOC283031 (Accession XP_210859.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283031.

[44414] LOC283046 (Accession XP_208495.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC283046 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283046, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283046 BINDING SITE, designated SEQ ID:9872, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44415] Another function of GAM3229 is therefore inhibition of LOC283046 (Accession XP_208495.1) . Accordingly, utili-

ties of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283046.

[44416] LOC283061 (Accession XP_210875.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC283061 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283061, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283061 BINDING SITE, designated SEQ ID:8704, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44417] Another function of GAM3229 is therefore inhibition of LOC283061 (Accession XP_210875.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283061.

[44418] LOC283089 (Accession XP_210885.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC283089 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by

LOC283089, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283089 BINDING SITE, designated SEQ ID:2783, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44419] Another function of GAM3229 is therefore inhibition of LOC283089 (Accession XP_210885.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283089.

[44420] LOC283112 (Accession XP_210890.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC283112 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283112, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283112 BINDING SITE, designated SEQ ID:12579, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44421] Another function of GAM3229 is therefore inhibition of LOC283112 (Accession XP_210890.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283112.

[44422] LOC283119 (Accession XP_210895.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC283119 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283119, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283119 BINDING SITE, designated SEQ ID:1059, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44423] Another function of GAM3229 is therefore inhibition of LOC283119 (Accession XP_210895.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283119.

[44424] LOC283120 (Accession XP_208516.1) is another GAM3229 target gene, herein designated TARGET GENE.

LOC283120 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283120, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283120 BINDING SITE, designated SEQ ID:18374, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44425] Another function of GAM3229 is therefore inhibition of LOC283120 (Accession XP_208516.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283120.

[44426] LOC283130 (Accession XP_208525.3) is another GAM3229 target gene, herein designated TARGET GENE. LOC283130 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283130, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283130 BINDING SITE, designated SEQ ID:13623, to the nucleotide sequence of

GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44427] Another function of GAM3229 is therefore inhibition of LOC283130 (Accession XP_208525.3) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283130.

[44428] LOC283177 (Accession XP_210903.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC283177 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283177, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283177 BINDING SITE, designated SEQ ID:3801, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44429] Another function of GAM3229 is therefore inhibition of LOC283177 (Accession XP_210903.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283177.

[44430] LOC283215 (Accession XP_208555.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC283215 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283215, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283215 BINDING SITE, designated SEQ ID:7550, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44431] Another function of GAM3229 is therefore inhibition of LOC283215 (Accession XP_208555.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283215.

[44432] LOC283293 (Accession XP_210962.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC283293 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283293, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC283293 BINDING SITE, designated SEQ ID:3960, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44433] Another function of GAM3229 is therefore inhibition of LOC283293 (Accession XP_210962.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283293.

[44434] LOC283323 (Accession XP_210973.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC283323 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283323, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283323 BINDING SITE, designated SEQ ID:620, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44435] Another function of GAM3229 is therefore inhibition of LOC283323 (Accession XP_210973.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC283323.

[44436] LOC283336 (Accession XP_208620.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC283336 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283336, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283336 BINDING SITE, designated SEQ ID:6969, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44437] Another function of GAM3229 is therefore inhibition of LOC283336 (Accession XP_208620.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283336.

[44438] LOC283387 (Accession XP_211007.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC283387 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283387, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283387 BINDING SITE, designated SEQ ID:19818, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44439] Another function of GAM3229 is therefore inhibition of LOC283387 (Accession XP_211007.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283387.

[44440] LOC283394 (Accession XP_211021.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC283394 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283394, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283394 BINDING SITE, designated SEQ ID:9191, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44441] Another function of GAM3229 is therefore inhibition of

LOC283394 (Accession XP_211021.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283394.

[44442] LOC283484 (Accession XP_211053.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC283484 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283484, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283484 BINDING SITE, designated SEQ ID:14686, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44443] Another function of GAM3229 is therefore inhibition of LOC283484 (Accession XP_211053.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283484.

[44444] LOC283487 (Accession XP_211062.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC283487 BINDING SITE is a target binding site found in

the 3` untranslated region of multiple transcripts of mRNA encoded by LOC283487, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283487 BINDING SITE, designated SEQ ID:4891, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44445] Another function of GAM3229 is therefore inhibition of LOC283487 (Accession XP_211062.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283487.

[44446] LOC283551 (Accession XP_211110.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC283551 BINDING SITE1 and LOC283551 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283551, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283551 BINDING SITE1 and LOC283551 BINDING SITE2, designated SEQ ID:17293 and SEQ ID:18515 respectively, to the

nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44447] Another function of GAM3229 is therefore inhibition of LOC283551 (Accession XP_211110.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283551.

[44448] LOC283575 (Accession XP_211095.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC283575 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283575, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283575 BINDING SITE, designated SEQ ID:6798, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44449] Another function of GAM3229 is therefore inhibition of LOC283575 (Accession XP_211095.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283575.

[44450] LOC283590 (Accession XP_208741.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC283590 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283590, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283590 BINDING SITE, designated SEQ ID:1550, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44451] Another function of GAM3229 is therefore inhibition of LOC283590 (Accession XP_208741.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283590.

[44452] LOC283641 (Accession XP_208764.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC283641 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283641, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC283641 BINDING SITE, designated SEQ ID:10286, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44453] Another function of GAM3229 is therefore inhibition of LOC283641 (Accession XP_208764.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283641.

[44454] LOC283655 (Accession XP_211144.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC283655 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283655, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283655 BINDING SITE, designated SEQ ID:3252, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44455] Another function of GAM3229 is therefore inhibition of LOC283655 (Accession XP_211144.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC283655.

[44456] LOC283728 (Accession XP_211183.3) is another GAM3229 target gene, herein designated TARGET GENE. LOC283728 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283728, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283728 BINDING SITE, designated SEQ ID:19012, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44457] Another function of GAM3229 is therefore inhibition of LOC283728 (Accession XP_211183.3) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283728.

[44458] LOC283767 (Accession XP_208835.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC283767 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283767, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283767 BINDING SITE, designated SEQ ID:1069, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44459] Another function of GAM3229 is therefore inhibition of LOC283767 (Accession XP_208835.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283767.

[44460] LOC283889 (Accession XP_208899.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC283889 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283889, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283889 BINDING SITE, designated SEQ ID:12163, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44461] Another function of GAM3229 is therefore inhibition of

LOC283889 (Accession XP_208899.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283889.

[44462] LOC283928 (Accession XP_208909.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC283928 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283928, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283928 BINDING SITE, designated SEQ ID:8866, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44463] Another function of GAM3229 is therefore inhibition of LOC283928 (Accession XP_208909.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283928.

[44464] LOC284001 (Accession XP_208958.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC284001 BINDING SITE is a target binding site found in

the 3` untranslated region of mRNA encoded by LOC284001, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284001 BINDING SITE, designated SEQ ID:14012, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44465] Another function of GAM3229 is therefore inhibition of LOC284001 (Accession XP_208958.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284001.

[44466] LOC284016 (Accession XP_211298.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC284016 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284016, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284016 BINDING SITE, designated SEQ ID:2783, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:221.

[44467] Another function of GAM3229 is therefore inhibition of LOC284016 (Accession XP_211298.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284016.

[44468] LOC284041 (Accession XP_211309.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC284041 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284041, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284041 BINDING SITE, designated SEQ ID:17544, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44469] Another function of GAM3229 is therefore inhibition of LOC284041 (Accession XP_211309.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284041.

[44470] LOC284063 (Accession XP_208992.1) is another

GAM3229 target gene, herein designated TARGET GENE. LOC284063 BINDING SITE1 and LOC284063 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284063, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284063 BINDING SITE1 and LOC284063 BINDING SITE2, designated SEQ ID:7960 and SEQ ID:9729 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44471] Another function of GAM3229 is therefore inhibition of LOC284063 (Accession XP_208992.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284063.

[44472] LOC284074 (Accession XP_211321.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC284074 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284074, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC284074 BINDING SITE, designated SEQ ID:1935, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44473] Another function of GAM3229 is therefore inhibition of LOC284074 (Accession XP_211321.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284074.

[44474] LOC284095 (Accession XP_211324.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC284095 BINDING SITE1 through LOC284095 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC284095, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284095 BINDING SITE1 through LOC284095 BINDING SITE3, designated SEQ ID:6762, SEQ ID:11871 and SEQ ID:3941 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44475] Another function of GAM3229 is therefore inhibition of LOC284095 (Accession XP_211324.1) . Accordingly, utili-

ties of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284095.

[44476] LOC284098 (Accession XP_209008.3) is another GAM3229 target gene, herein designated TARGET GENE. LOC284098 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284098, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284098 BINDING SITE, designated SEQ ID:10075, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44477] Another function of GAM3229 is therefore inhibition of LOC284098 (Accession XP_209008.3) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284098.

[44478] LOC284101 (Accession XP_209019.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC284101 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by

LOC284101, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284101 BINDING SITE, designated SEQ ID:2800, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44479] Another function of GAM3229 is therefore inhibition of LOC284101 (Accession XP_209019.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284101.

[44480] LOC284102 (Accession XP_211327.3) is another GAM3229 target gene, herein designated TARGET GENE. LOC284102 BINDING SITE1 through LOC284102 BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by LOC284102, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284102 BINDING SITE1 through LOC284102 BINDING SITE4, designated SEQ ID:6048, SEQ ID:9397, SEQ ID:4684 and SEQ ID:15652 respectively, to the nucleotide sequence of

GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44481] Another function of GAM3229 is therefore inhibition of LOC284102 (Accession XP_211327.3) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284102.

[44482] LOC284117 (Accession XP_209024.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC284117 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284117, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284117 BINDING SITE, designated SEQ ID:3205, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44483] Another function of GAM3229 is therefore inhibition of LOC284117 (Accession XP_209024.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284117.

[44484] LOC284135 (Accession XP_209032.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC284135 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284135, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284135 BINDING SITE, designated SEQ ID:2340, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44485] Another function of GAM3229 is therefore inhibition of LOC284135 (Accession XP_209032.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284135.

[44486] LOC284183 (Accession XP_209059.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC284183 BINDING SITE1 and LOC284183 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284183, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the com-

plementarity of the nucleotide sequences of LOC284183 BINDING SITE1 and LOC284183 BINDING SITE2, designated SEQ ID:4891 and SEQ ID:9729 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44487] Another function of GAM3229 is therefore inhibition of LOC284183 (Accession XP_209059.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284183.

[44488] LOC284186 (Accession XP_209060.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC284186 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284186, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284186 BINDING SITE, designated SEQ ID:18663, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44489] Another function of GAM3229 is therefore inhibition of LOC284186 (Accession XP_209060.2) . Accordingly, utili-

ties of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284186.

[44490] LOC284191 (Accession XP_211377.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC284191 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284191, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284191 BINDING SITE, designated SEQ ID:6160, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44491] Another function of GAM3229 is therefore inhibition of LOC284191 (Accession XP_211377.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284191.

[44492] LOC284260 (Accession XP_211408.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC284260 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

LOC284260, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284260 BINDING SITE, designated SEQ ID:8657, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44493] Another function of GAM3229 is therefore inhibition of LOC284260 (Accession XP_211408.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284260.

[44494] LOC284276 (Accession XP_211412.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC284276 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284276, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284276 BINDING SITE, designated SEQ ID:10075, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44495] Another function of GAM3229 is therefore inhibition of LOC284276 (Accession XP_211412.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284276.

[44496] LOC284294 (Accession XP_211421.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC284294 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284294, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284294 BINDING SITE, designated SEQ ID:13205, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44497] Another function of GAM3229 is therefore inhibition of LOC284294 (Accession XP_211421.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284294.

[44498] LOC284305 (Accession XP_211425.1) is another GAM3229 target gene, herein designated TARGET GENE.

LOC284305 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284305, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284305 BINDING SITE, designated SEQ ID:4957, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44499] Another function of GAM3229 is therefore inhibition of LOC284305 (Accession XP_211425.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284305.

[44500] LOC284317 (Accession XP_209162.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC284317 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284317, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284317 BINDING SITE, designated SEQ ID:16453, to the nucleotide sequence of

GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44501] Another function of GAM3229 is therefore inhibition of LOC284317 (Accession XP_209162.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284317.

[44502] LOC284337 (Accession XP_211434.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC284337 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284337, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284337 BINDING SITE, designated SEQ ID:12960, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44503] Another function of GAM3229 is therefore inhibition of LOC284337 (Accession XP_211434.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284337.

[44504] LOC284361 (Accession NP_778233.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC284361 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284361, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284361 BINDING SITE, designated SEQ ID:11166, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44505] Another function of GAM3229 is therefore inhibition of LOC284361 (Accession NP_778233.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284361.

[44506] LOC284362 (Accession XP_211435.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC284362 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284362, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC284362 BINDING SITE, designated SEQ ID:941, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44507] Another function of GAM3229 is therefore inhibition of LOC284362 (Accession XP_211435.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284362.

[44508] LOC284421 (Accession XP_209200.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC284421 BINDING SITE1 and LOC284421 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284421, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284421 BINDING SITE1 and LOC284421 BINDING SITE2, designated SEQ ID:10044 and SEQ ID:2187 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44509] Another function of GAM3229 is therefore inhibition of LOC284421 (Accession XP_209200.1) . Accordingly, utili-

ties of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284421.

[44510] LOC284426 (Accession XP_209198.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC284426 BINDING SITE1 through LOC284426 BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by LOC284426, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284426 BINDING SITE1 through LOC284426 BINDING SITE4, designated SEQ ID:20053, SEQ ID:19721, SEQ ID:9681 and SEQ ID:7372 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44511] Another function of GAM3229 is therefore inhibition of LOC284426 (Accession XP_209198.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284426.

[44512] LOC284436 (Accession XP_290862.1) is another GAM3229 target gene, herein designated TARGET GENE.

LOC284436 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284436, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284436 BINDING SITE, designated SEQ ID:19435, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44513] Another function of GAM3229 is therefore inhibition of LOC284436 (Accession XP_290862.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284436.

[44514] LOC284454 (Accession XP_209216.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC284454 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284454, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284454 BINDING SITE, designated SEQ ID:9887, to the nucleotide sequence of

GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44515] Another function of GAM3229 is therefore inhibition of LOC284454 (Accession XP_209216.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284454.

[44516] LOC284456 (Accession XP_211470.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC284456 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284456, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284456 BINDING SITE, designated SEQ ID:18780, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44517] Another function of GAM3229 is therefore inhibition of LOC284456 (Accession XP_211470.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284456.

[44518] LOC284464 (Accession XP_209221.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC284464 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284464, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284464 BINDING SITE, designated SEQ ID:6969, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44519] Another function of GAM3229 is therefore inhibition of LOC284464 (Accession XP_209221.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284464.

[44520] LOC284471 (Accession XP_209225.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC284471 BINDING SITE1 and LOC284471 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284471, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the com-

plementarity of the nucleotide sequences of LOC284471 BINDING SITE1 and LOC284471 BINDING SITE2, designated SEQ ID:6824 and SEQ ID:6873 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44521] Another function of GAM3229 is therefore inhibition of LOC284471 (Accession XP_209225.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284471.

[44522] LOC284475 (Accession XP_211478.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC284475 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284475, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284475 BINDING SITE, designated SEQ ID:6825, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44523] Another function of GAM3229 is therefore inhibition of LOC284475 (Accession XP_211478.1) . Accordingly, utili-

ties of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284475.

[44524] LOC284512 (Accession XP_211500.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC284512 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284512, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284512 BINDING SITE, designated SEQ ID:13007, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44525] Another function of GAM3229 is therefore inhibition of LOC284512 (Accession XP_211500.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284512.

[44526] LOC284514 (Accession XP_209244.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC284514 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

LOC284514, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284514 BINDING SITE, designated SEQ ID:16576, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44527] Another function of GAM3229 is therefore inhibition of LOC284514 (Accession XP_209244.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284514.

[44528] LOC284568 (Accession XP_209263.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC284568 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284568, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284568 BINDING SITE, designated SEQ ID:4506, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44529] Another function of GAM3229 is therefore inhibition of LOC284568 (Accession XP_209263.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284568.

[44530] LOC284587 (Accession XP_209278.3) is another GAM3229 target gene, herein designated TARGET GENE. LOC284587 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284587, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284587 BINDING SITE, designated SEQ ID:9877, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44531] Another function of GAM3229 is therefore inhibition of LOC284587 (Accession XP_209278.3) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284587.

[44532] LOC284630 (Accession XP_211562.1) is another GAM3229 target gene, herein designated TARGET GENE.

LOC284630 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284630, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284630 BINDING SITE, designated SEQ ID:15653, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44533] Another function of GAM3229 is therefore inhibition of LOC284630 (Accession XP_211562.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284630.

[44534] LOC284701 (Accession XP_294994.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC284701 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284701, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284701 BINDING SITE, designated SEQ ID:8135, to the nucleotide sequence of

GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44535] Another function of GAM3229 is therefore inhibition of LOC284701 (Accession XP_294994.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284701.

[44536] LOC284723 (Accession XP_211602.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC284723 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284723, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284723 BINDING SITE, designated SEQ ID:1735, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44537] Another function of GAM3229 is therefore inhibition of LOC284723 (Accession XP_211602.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284723.

[44538] LOC284745 (Accession XP_211620.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC284745 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284745, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284745 BINDING SITE, designated SEQ ID:9999, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44539] Another function of GAM3229 is therefore inhibition of LOC284745 (Accession XP_211620.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284745.

[44540] LOC284837 (Accession XP_211658.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC284837 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284837, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC284837 BINDING SITE, designated SEQ ID:18808, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44541] Another function of GAM3229 is therefore inhibition of LOC284837 (Accession XP_211658.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284837.

[44542] LOC284865 (Accession XP_211672.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC284865 BINDING SITE1 and LOC284865 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284865, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284865 BINDING SITE1 and LOC284865 BINDING SITE2, designated SEQ ID:10282 and SEQ ID:16817 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44543] Another function of GAM3229 is therefore inhibition of LOC284865 (Accession XP_211672.1) . Accordingly, utili-

ties of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284865.

[44544] LOC284934 (Accession XP_211696.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC284934 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284934, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284934 BINDING SITE, designated SEQ ID:18766, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44545] Another function of GAM3229 is therefore inhibition of LOC284934 (Accession XP_211696.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284934.

[44546] LOC285001 (Accession XP_211730.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285001 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by

LOC285001, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285001 BINDING SITE, designated SEQ ID:18439, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44547] Another function of GAM3229 is therefore inhibition of LOC285001 (Accession XP_211730.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285001.

[44548] LOC285026 (Accession XP_209440.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285026 BINDING SITE1 and LOC285026 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285026, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285026 BINDING SITE1 and LOC285026 BINDING SITE2, designated SEQ ID:3961 and SEQ ID:6793 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated

GAM RNA, also designated SEQ ID:221.

[44549] Another function of GAM3229 is therefore inhibition of LOC285026 (Accession XP_209440.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285026.

[44550] LOC285033 (Accession XP_211739.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285033 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285033, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285033 BINDING SITE, designated SEQ ID:16976, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44551] Another function of GAM3229 is therefore inhibition of LOC285033 (Accession XP_211739.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285033.

[44552] LOC285058 (Accession XP_211753.1) is another

GAM3229 target gene, herein designated TARGET GENE. LOC285058 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285058, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285058 BINDING SITE, designated SEQ ID:9309, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44553] Another function of GAM3229 is therefore inhibition of LOC285058 (Accession XP_211753.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285058.

[44554] LOC285083 (Accession XP_209464.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285083 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285083, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285083 BINDING SITE, desig-

nated SEQ ID:2096, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44555] Another function of GAM3229 is therefore inhibition of LOC285083 (Accession XP_209464.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285083.

[44556] LOC285088 (Accession XP_209465.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285088 BINDING SITE1 and LOC285088 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285088, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285088 BINDING SITE1 and LOC285088 BINDING SITE2, designated SEQ ID:9680 and SEQ ID:10075 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44557] Another function of GAM3229 is therefore inhibition of LOC285088 (Accession XP_209465.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC285088.

[44558] LOC285136 (Accession XP_211777.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285136 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285136, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285136 BINDING SITE, designated SEQ ID:14792, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44559] Another function of GAM3229 is therefore inhibition of LOC285136 (Accession XP_211777.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285136.

[44560] LOC285221 (Accession XP_209521.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285221 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285221, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285221 BINDING SITE, designated SEQ ID:6398, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44561] Another function of GAM3229 is therefore inhibition of LOC285221 (Accession XP_209521.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285221.

[44562] LOC285231 (Accession XP_211813.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285231 BINDING SITE1 through LOC285231 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC285231, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285231 BINDING SITE1 through LOC285231 BINDING SITE3, designated SEQ ID:7578, SEQ ID:16034 and SEQ ID:8476 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44563] Another function of GAM3229 is therefore inhibition of LOC285231 (Accession XP_211813.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285231.

[44564] LOC285299 (Accession XP_209554.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285299 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285299, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285299 BINDING SITE, designated SEQ ID:2404, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44565] Another function of GAM3229 is therefore inhibition of LOC285299 (Accession XP_209554.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285299.

[44566] LOC285334 (Accession XP_211844.1) is another GAM3229 target gene, herein designated TARGET GENE.

LOC285334 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285334, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285334 BINDING SITE, designated SEQ ID:16422, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44567] Another function of GAM3229 is therefore inhibition of LOC285334 (Accession XP_211844.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285334.

[44568] LOC285344 (Accession XP_211853.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285344 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285344, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285344 BINDING SITE, designated SEQ ID:4229, to the nucleotide sequence of

GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44569] Another function of GAM3229 is therefore inhibition of LOC285344 (Accession XP_211853.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285344.

[44570] LOC285345 (Accession XP_211854.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285345 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285345, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285345 BINDING SITE, designated SEQ ID:2368, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44571] Another function of GAM3229 is therefore inhibition of LOC285345 (Accession XP_211854.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285345.

[44572] LOC285363 (Accession XP_211870.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285363 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285363, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285363 BINDING SITE, designated SEQ ID:14046, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44573] Another function of GAM3229 is therefore inhibition of LOC285363 (Accession XP_211870.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285363.

[44574] LOC285398 (Accession XP_209593.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285398 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285398, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC285398 BINDING SITE, designated SEQ ID:10964, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44575] Another function of GAM3229 is therefore inhibition of LOC285398 (Accession XP_209593.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285398.

[44576] LOC285540 (Accession XP_209654.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285540 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285540, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285540 BINDING SITE, designated SEQ ID:18955, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44577] Another function of GAM3229 is therefore inhibition of LOC285540 (Accession XP_209654.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC285540.

[44578] LOC285587 (Accession XP_211947.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285587 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285587, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285587 BINDING SITE, designated SEQ ID:12848, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44579] Another function of GAM3229 is therefore inhibition of LOC285587 (Accession XP_211947.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285587.

[44580] LOC285589 (Accession XP_209671.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285589 BINDING SITE1 and LOC285589 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285589, corresponding to

target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285589 BINDING SITE1 and LOC285589 BINDING SITE2, designated SEQ ID:11982 and SEQ ID:6398 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44581] Another function of GAM3229 is therefore inhibition of LOC285589 (Accession XP_209671.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285589.

[44582] LOC285626 (Accession XP_211959.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285626 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285626, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285626 BINDING SITE, designated SEQ ID:14142, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44583] Another function of GAM3229 is therefore inhibition of LOC285626 (Accession XP_211959.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285626.

[44584] LOC285638 (Accession XP_209693.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285638 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285638, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285638 BINDING SITE, designated SEQ ID:1800, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44585] Another function of GAM3229 is therefore inhibition of LOC285638 (Accession XP_209693.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285638.

[44586] LOC285683 (Accession XP_211980.1) is another GAM3229 target gene, herein designated TARGET GENE.

LOC285683 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285683, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285683 BINDING SITE, designated SEQ ID:14636, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44587] Another function of GAM3229 is therefore inhibition of LOC285683 (Accession XP_211980.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285683.

[44588] LOC285722 (Accession XP_211997.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285722 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285722, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285722 BINDING SITE, designated SEQ ID:19086, to the nucleotide sequence of

GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44589] Another function of GAM3229 is therefore inhibition of LOC285722 (Accession XP_211997.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285722.

[44590] LOC285744 (Accession XP_209743.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285744 BINDING SITE1 and LOC285744 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285744, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285744 BINDING SITE1 and LOC285744 BINDING SITE2, designated SEQ ID:8764 and SEQ ID:17380 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44591] Another function of GAM3229 is therefore inhibition of LOC285744 (Accession XP_209743.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC285744.

[44592] LOC285747 (Accession XP_209742.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285747 BINDING SITE1 and LOC285747 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285747, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285747 BINDING SITE1 and LOC285747 BINDING SITE2, designated SEQ ID:6072 and SEQ ID:13313 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44593] Another function of GAM3229 is therefore inhibition of LOC285747 (Accession XP_209742.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285747.

[44594] LOC285749 (Accession XP_212010.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285749 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285749, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285749 BINDING SITE, designated SEQ ID:4758, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44595] Another function of GAM3229 is therefore inhibition of LOC285749 (Accession XP_212010.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285749.

[44596] LOC285760 (Accession XP_209750.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285760 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285760, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285760 BINDING SITE, designated SEQ ID:10409, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44597] Another function of GAM3229 is therefore inhibition of

LOC285760 (Accession XP_209750.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285760.

[44598] LOC285822 (Accession XP_209777.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285822 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285822, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285822 BINDING SITE, designated SEQ ID:6398, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44599] Another function of GAM3229 is therefore inhibition of LOC285822 (Accession XP_209777.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285822.

[44600] LOC285835 (Accession XP_212057.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285835 BINDING SITE is a target binding site found in

the 5` untranslated region of mRNA encoded by LOC285835, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285835 BINDING SITE, designated SEQ ID:9471, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44601] Another function of GAM3229 is therefore inhibition of LOC285835 (Accession XP_212057.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285835.

[44602] LOC285842 (Accession XP_212041.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285842 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285842, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285842 BINDING SITE, designated SEQ ID:10492, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:221.

[44603] Another function of GAM3229 is therefore inhibition of LOC285842 (Accession XP_212041.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285842.

[44604] LOC285843 (Accession XP_212034.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285843 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285843, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285843 BINDING SITE, designated SEQ ID:10152, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44605] Another function of GAM3229 is therefore inhibition of LOC285843 (Accession XP_212034.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285843.

[44606] LOC285847 (Accession XP_212045.1) is another

GAM3229 target gene, herein designated TARGET GENE. LOC285847 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285847, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285847 BINDING SITE, designated SEQ ID:10601, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44607] Another function of GAM3229 is therefore inhibition of LOC285847 (Accession XP_212045.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285847.

[44608] LOC285922 (Accession XP_209822.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285922 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285922, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285922 BINDING SITE, desig-

nated SEQ ID:8542, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44609] Another function of GAM3229 is therefore inhibition of LOC285922 (Accession XP_209822.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285922.

[44610] LOC285923 (Accession XP_212104.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285923 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285923, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285923 BINDING SITE, designated SEQ ID:7843, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44611] Another function of GAM3229 is therefore inhibition of LOC285923 (Accession XP_212104.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC285923.

[44612] LOC285930 (Accession XP_209818.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285930 BINDING SITE1 and LOC285930 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285930, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285930 BINDING SITE1 and LOC285930 BINDING SITE2, designated SEQ ID:6763 and SEQ ID:18902 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44613] Another function of GAM3229 is therefore inhibition of LOC285930 (Accession XP_209818.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285930.

[44614] LOC285958 (Accession XP_212099.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285958 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285958, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285958 BINDING SITE, designated SEQ ID:10240, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44615] Another function of GAM3229 is therefore inhibition of LOC285958 (Accession XP_212099.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285958.

[44616] LOC285961 (Accession XP_209833.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285961 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285961, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285961 BINDING SITE, designated SEQ ID:12547, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44617] Another function of GAM3229 is therefore inhibition of

LOC285961 (Accession XP_209833.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285961.

[44618] LOC285969 (Accession XP_209842.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285969 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285969, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285969 BINDING SITE, designated SEQ ID:1953, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44619] Another function of GAM3229 is therefore inhibition of LOC285969 (Accession XP_209842.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285969.

[44620] LOC285972 (Accession XP_212105.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285972 BINDING SITE is a target binding site found in

the 3` untranslated region of mRNA encoded by LOC285972, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285972 BINDING SITE, designated SEQ ID:9694, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44621] Another function of GAM3229 is therefore inhibition of LOC285972 (Accession XP_212105.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285972.

[44622] LOC285999 (Accession XP_212120.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC285999 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285999, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285999 BINDING SITE, designated SEQ ID:11099, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:221.

[44623] Another function of GAM3229 is therefore inhibition of LOC285999 (Accession XP_212120.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285999.

[44624] LOC286029 (Accession XP_209866.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC286029 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286029, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286029 BINDING SITE, designated SEQ ID:3117, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44625] Another function of GAM3229 is therefore inhibition of LOC286029 (Accession XP_209866.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286029.

[44626] LOC286058 (Accession XP_212158.1) is another

GAM3229 target gene, herein designated TARGET GENE. LOC286058 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286058, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286058 BINDING SITE, designated SEQ ID:15856, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44627] Another function of GAM3229 is therefore inhibition of LOC286058 (Accession XP_212158.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286058.

[44628] LOC286078 (Accession XP_212163.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC286078 BINDING SITE1 and LOC286078 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC286078, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286078

BINDING SITE1 and LOC286078 BINDING SITE2, designated SEQ ID:8047 and SEQ ID:13047 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44629] Another function of GAM3229 is therefore inhibition of LOC286078 (Accession XP_212163.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286078.

[44630] LOC286103 (Accession NP_848630.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC286103 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LOC286103, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286103 BINDING SITE, designated SEQ ID:5123, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44631] Another function of GAM3229 is therefore inhibition of LOC286103 (Accession NP_848630.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC286103.

[44632] LOC286103 (Accession XP_209897.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC286103 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LOC286103, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286103 BINDING SITE, designated SEQ ID:5123, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44633] Another function of GAM3229 is therefore inhibition of LOC286103 (Accession XP_209897.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286103.

[44634] LOC286186 (Accession XP_212219.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC286186 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286186, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286186 BINDING SITE, designated SEQ ID:5503, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44635] Another function of GAM3229 is therefore inhibition of LOC286186 (Accession XP_212219.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286186.

[44636] LOC286191 (Accession XP_212217.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC286191 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286191, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286191 BINDING SITE, designated SEQ ID:5905, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44637] Another function of GAM3229 is therefore inhibition of

LOC286191 (Accession XP_212217.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286191.

[44638] LOC286207 (Accession XP_209941.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC286207 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286207, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286207 BINDING SITE, designated SEQ ID:15150, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44639] Another function of GAM3229 is therefore inhibition of LOC286207 (Accession XP_209941.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286207.

[44640] LOC286208 (Accession XP_212230.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC286208 BINDING SITE1 and LOC286208 BINDING

SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC286208, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286208 BINDING SITE1 and LOC286208 BINDING SITE2, designated SEQ ID:12103 and SEQ ID:18679 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44641] Another function of GAM3229 is therefore inhibition of LOC286208 (Accession XP_212230.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286208.

[44642] LOC286334 (Accession XP_303033.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC286334 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286334, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286334 BINDING SITE, designated SEQ ID:10661, to the nucleotide sequence of

GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44643] Another function of GAM3229 is therefore inhibition of LOC286334 (Accession XP_303033.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286334.

[44644] LOC286341 (Accession XP_212278.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC286341 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286341, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286341 BINDING SITE, designated SEQ ID:10075, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44645] Another function of GAM3229 is therefore inhibition of LOC286341 (Accession XP_212278.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286341.

[44646] LOC286356 (Accession XP_212290.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC286356 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286356, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286356 BINDING SITE, designated SEQ ID:13314, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44647] Another function of GAM3229 is therefore inhibition of LOC286356 (Accession XP_212290.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286356.

[44648] LOC286359 (Accession XP_212288.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC286359 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286359, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC286359 BINDING SITE, designated SEQ ID:16003, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44649] Another function of GAM3229 is therefore inhibition of LOC286359 (Accession XP_212288.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286359.

[44650] LOC286401 (Accession XP_212310.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC286401 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286401, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286401 BINDING SITE, designated SEQ ID:1364, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44651] Another function of GAM3229 is therefore inhibition of LOC286401 (Accession XP_212310.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC286401.

[44652] LOC286435 (Accession XP_210047.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC286435 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286435, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286435 BINDING SITE, designated SEQ ID:6220, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44653] Another function of GAM3229 is therefore inhibition of LOC286435 (Accession XP_210047.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286435.

[44654] LOC286437 (Accession XP_210050.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC286437 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286437, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286437 BINDING SITE, designated SEQ ID:15960, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44655] Another function of GAM3229 is therefore inhibition of LOC286437 (Accession XP_210050.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286437.

[44656] LOC286441 (Accession XP_212319.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC286441 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286441, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286441 BINDING SITE, designated SEQ ID:9998, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44657] Another function of GAM3229 is therefore inhibition of

LOC286441 (Accession XP_212319.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286441.

[44658] LOC338575 (Accession XP_290473.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC338575 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338575, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338575 BINDING SITE, designated SEQ ID:16337, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44659] Another function of GAM3229 is therefore inhibition of LOC338575 (Accession XP_290473.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338575.

[44660] LOC338612 (Accession XP_294668.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC338612 BINDING SITE is a target binding site found in

the 5` untranslated region of mRNA encoded by LOC338612, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338612 BINDING SITE, designated SEQ ID:5199, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44661] Another function of GAM3229 is therefore inhibition of LOC338612 (Accession XP_294668.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338612.

[44662] LOC338645 (Accession XP_290494.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC338645 BINDING SITE1 and LOC338645 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC338645, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338645 BINDING SITE1 and LOC338645 BINDING SITE2, designated SEQ ID:13444 and SEQ ID:2827 respectively, to the

nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44663] Another function of GAM3229 is therefore inhibition of LOC338645 (Accession XP_290494.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338645.

[44664] LOC338709 (Accession XP_211595.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC338709 BINDING SITE1 and LOC338709 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC338709, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338709 BINDING SITE1 and LOC338709 BINDING SITE2, designated SEQ ID:8135 and SEQ ID:9877 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44665] Another function of GAM3229 is therefore inhibition of LOC338709 (Accession XP_211595.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC338709.

[44666] LOC338773 (Accession XP_290570.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC338773 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338773, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338773 BINDING SITE, designated SEQ ID:9515, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44667] Another function of GAM3229 is therefore inhibition of LOC338773 (Accession XP_290570.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338773.

[44668] LOC338799 (Accession NP_848633.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC338799 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by LOC338799, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338799 BINDING SITE, designated SEQ ID:14539, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44669] Another function of GAM3229 is therefore inhibition of LOC338799 (Accession NP_848633.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338799.

[44670] LOC338817 (Accession XP_290588.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC338817 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338817, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338817 BINDING SITE, designated SEQ ID:19436, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44671] Another function of GAM3229 is therefore inhibition of LOC338817 (Accession XP_290588.1) . Accordingly, utili-

ties of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338817.

[44672] LOC338864 (Accession XP_294731.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC338864 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338864, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338864 BINDING SITE, designated SEQ ID:16899, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44673] Another function of GAM3229 is therefore inhibition of LOC338864 (Accession XP_294731.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338864.

[44674] LOC338899 (Accession XP_294740.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC338899 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by

LOC338899, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338899 BINDING SITE, designated SEQ ID:8395, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44675] Another function of GAM3229 is therefore inhibition of LOC338899 (Accession XP_294740.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338899.

[44676] LOC338917 (Accession XP_290610.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC338917 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338917, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338917 BINDING SITE, designated SEQ ID:8024, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44677] Another function of GAM3229 is therefore inhibition of LOC338917 (Accession XP_290610.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338917.

[44678] LOC338991 (Accession XP_290663.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC338991 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338991, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338991 BINDING SITE, designated SEQ ID:1069, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44679] Another function of GAM3229 is therefore inhibition of LOC338991 (Accession XP_290663.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338991.

[44680] LOC338999 (Accession XP_290659.1) is another GAM3229 target gene, herein designated TARGET GENE.

LOC338999 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338999, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338999 BINDING SITE, designated SEQ ID:1069, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44681] Another function of GAM3229 is therefore inhibition of LOC338999 (Accession XP_290659.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338999.

[44682] LOC339077 (Accession XP_294802.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC339077 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339077, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339077 BINDING SITE, designated SEQ ID:9695, to the nucleotide sequence of

GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44683] Another function of GAM3229 is therefore inhibition of LOC339077 (Accession XP_294802.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339077.

[44684] LOC339078 (Accession XP_290692.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC339078 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339078, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339078 BINDING SITE, designated SEQ ID:9304, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44685] Another function of GAM3229 is therefore inhibition of LOC339078 (Accession XP_290692.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339078.

[44686] LOC339091 (Accession XP_290239.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC339091 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339091, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339091 BINDING SITE, designated SEQ ID:13820, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44687] Another function of GAM3229 is therefore inhibition of LOC339091 (Accession XP_290239.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339091.

[44688] LOC339146 (Accession XP_294825.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC339146 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339146, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC339146 BINDING SITE, designated SEQ ID:2752, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44689] Another function of GAM3229 is therefore inhibition of LOC339146 (Accession XP_294825.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339146.

[44690] LOC339178 (Accession XP_290742.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC339178 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339178, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339178 BINDING SITE, designated SEQ ID:19259, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44691] Another function of GAM3229 is therefore inhibition of LOC339178 (Accession XP_290742.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC339178.

[44692] LOC339201 (Accession XP_290756.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC339201 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339201, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339201 BINDING SITE, designated SEQ ID:7031, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44693] Another function of GAM3229 is therefore inhibition of LOC339201 (Accession XP_290756.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339201.

[44694] LOC339216 (Accession XP_290762.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC339216 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339216, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339216 BINDING SITE, designated SEQ ID:2800, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44695] Another function of GAM3229 is therefore inhibition of LOC339216 (Accession XP_290762.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339216.

[44696] LOC339282 (Accession XP_294900.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC339282 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339282, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339282 BINDING SITE, designated SEQ ID:2800, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44697] Another function of GAM3229 is therefore inhibition of

LOC339282 (Accession XP_294900.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339282.

[44698] LOC339283 (Accession XP_294899.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC339283 BINDING SITE1 and LOC339283 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC339283, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339283 BINDING SITE1 and LOC339283 BINDING SITE2, designated SEQ ID:12131 and SEQ ID:2800 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44699] Another function of GAM3229 is therefore inhibition of LOC339283 (Accession XP_294899.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339283.

[44700] LOC339325 (Accession XP_290830.1) is another GAM3229 target gene, herein designated TARGET GENE.

LOC339325 BINDING SITE1 and LOC339325 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC339325, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339325 BINDING SITE1 and LOC339325 BINDING SITE2, designated SEQ ID:20083 and SEQ ID:9527 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44701] Another function of GAM3229 is therefore inhibition of LOC339325 (Accession XP_290830.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339325.

[44702] LOC339400 (Accession XP_294926.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC339400 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339400, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339400 BINDING SITE, desig-

nated SEQ ID:17876, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44703] Another function of GAM3229 is therefore inhibition of LOC339400 (Accession XP_294926.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339400.

[44704] LOC339459 (Accession XP_290907.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC339459 BINDING SITE1 and LOC339459 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC339459, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339459 BINDING SITE1 and LOC339459 BINDING SITE2, designated SEQ ID:537 and SEQ ID:4044 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44705] Another function of GAM3229 is therefore inhibition of LOC339459 (Accession XP_290907.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC339459.

[44706] LOC339492 (Accession XP_290919.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC339492 BINDING SITE1 and LOC339492 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC339492, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339492 BINDING SITE1 and LOC339492 BINDING SITE2, designated SEQ ID:3503 and SEQ ID:1590 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44707] Another function of GAM3229 is therefore inhibition of LOC339492 (Accession XP_290919.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339492.

[44708] LOC339577 (Accession XP_295005.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC339577 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

LOC339577, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339577 BINDING SITE, designated SEQ ID:18440, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44709] Another function of GAM3229 is therefore inhibition of LOC339577 (Accession XP_295005.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339577.

[44710] LOC339600 (Accession XP_295014.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC339600 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339600, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339600 BINDING SITE, designated SEQ ID:18533, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44711] Another function of GAM3229 is therefore inhibition of LOC339600 (Accession XP_295014.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339600.

[44712] LOC339635 (Accession XP_293210.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC339635 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339635, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339635 BINDING SITE, designated SEQ ID:19918, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44713] Another function of GAM3229 is therefore inhibition of LOC339635 (Accession XP_293210.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339635.

[44714] LOC339685 (Accession XP_295032.1) is another GAM3229 target gene, herein designated TARGET GENE.

LOC339685 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339685, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339685 BINDING SITE, designated SEQ ID:19789, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44715] Another function of GAM3229 is therefore inhibition of LOC339685 (Accession XP_295032.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339685.

[44716] LOC339694 (Accession XP_295035.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC339694 BINDING SITE1 and LOC339694 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC339694, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339694 BINDING SITE1 and LOC339694 BINDING SITE2, desig-

nated SEQ ID:7230 and SEQ ID:12466 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44717] Another function of GAM3229 is therefore inhibition of LOC339694 (Accession XP_295035.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339694.

[44718] LOC339720 (Accession XP_295041.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC339720 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339720, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339720 BINDING SITE, designated SEQ ID:9730, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44719] Another function of GAM3229 is therefore inhibition of LOC339720 (Accession XP_295041.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC339720.

[44720] LOC339738 (Accession XP_295048.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC339738 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339738, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339738 BINDING SITE, designated SEQ ID:7722, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44721] Another function of GAM3229 is therefore inhibition of LOC339738 (Accession XP_295048.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339738.

[44722] LOC339751 (Accession XP_295053.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC339751 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339751, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339751 BINDING SITE, designated SEQ ID:13172, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44723] Another function of GAM3229 is therefore inhibition of LOC339751 (Accession XP_295053.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339751.

[44724] LOC339803 (Accession XP_295072.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC339803 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339803, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339803 BINDING SITE, designated SEQ ID:10537, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44725] Another function of GAM3229 is therefore inhibition of LOC339803 (Accession XP_295072.1) . Accordingly, utili-

ties of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339803.

[44726] LOC339807 (Accession XP_295070.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC339807 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339807, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339807 BINDING SITE, designated SEQ ID:11926, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44727] Another function of GAM3229 is therefore inhibition of LOC339807 (Accession XP_295070.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339807.

[44728] LOC339809 (Accession XP_291020.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC339809 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by

LOC339809, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339809 BINDING SITE, designated SEQ ID:17851, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44729] Another function of GAM3229 is therefore inhibition of LOC339809 (Accession XP_291020.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339809.

[44730] LOC339813 (Accession XP_295074.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC339813 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339813, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339813 BINDING SITE, designated SEQ ID:10359, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44731] Another function of GAM3229 is therefore inhibition of LOC339813 (Accession XP_295074.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339813.

[44732] LOC339833 (Accession XP_291031.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC339833 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339833, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339833 BINDING SITE, designated SEQ ID:17042, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44733] Another function of GAM3229 is therefore inhibition of LOC339833 (Accession XP_291031.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339833.

[44734] LOC339907 (Accession XP_291065.1) is another GAM3229 target gene, herein designated TARGET GENE.

LOC339907 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339907, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339907 BINDING SITE, designated SEQ ID:8327, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44735] Another function of GAM3229 is therefore inhibition of LOC339907 (Accession XP_291065.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339907.

[44736] LOC339942 (Accession XP_295107.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC339942 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339942, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339942 BINDING SITE, designated SEQ ID:11400, to the nucleotide sequence of

GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44737] Another function of GAM3229 is therefore inhibition of LOC339942 (Accession XP_295107.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339942.

[44738] LOC340125 (Accession XP_291150.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC340125 BINDING SITE1 and LOC340125 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC340125, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340125 BINDING SITE1 and LOC340125 BINDING SITE2, designated SEQ ID:9877 and SEQ ID:8135 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44739] Another function of GAM3229 is therefore inhibition of LOC340125 (Accession XP_291150.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC340125.

[44740] LOC340138 (Accession XP_291153.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC340138 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340138, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340138 BINDING SITE, designated SEQ ID:2497, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44741] Another function of GAM3229 is therefore inhibition of LOC340138 (Accession XP_291153.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340138.

[44742] LOC340170 (Accession XP_291160.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC340170 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340170, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340170 BINDING SITE, designated SEQ ID:1195, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44743] Another function of GAM3229 is therefore inhibition of LOC340170 (Accession XP_291160.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340170.

[44744] LOC340227 (Accession XP_291203.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC340227 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC340227, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340227 BINDING SITE, designated SEQ ID:8135, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44745] Another function of GAM3229 is therefore inhibition of LOC340227 (Accession XP_291203.1) . Accordingly, utili-

ties of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340227.

[44746] LOC340249 (Accession XP_291211.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC340249 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340249, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340249 BINDING SITE, designated SEQ ID:20021, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44747] Another function of GAM3229 is therefore inhibition of LOC340249 (Accession XP_291211.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340249.

[44748] LOC340290 (Accession XP_291214.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC340290 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by

LOC340290, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340290 BINDING SITE, designated SEQ ID:8135, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44749] Another function of GAM3229 is therefore inhibition of LOC340290 (Accession XP_291214.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340290.

[44750] LOC340321 (Accession XP_295212.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC340321 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC340321, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340321 BINDING SITE, designated SEQ ID:1655, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44751] Another function of GAM3229 is therefore inhibition of LOC340321 (Accession XP_295212.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340321.

[44752] LOC340390 (Accession XP_291269.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC340390 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340390, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340390 BINDING SITE, designated SEQ ID:1473, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44753] Another function of GAM3229 is therefore inhibition of LOC340390 (Accession XP_291269.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340390.

[44754] LOC340414 (Accession XP_295240.1) is another GAM3229 target gene, herein designated TARGET GENE.

LOC340414 BINDING SITE1 and LOC340414 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC340414, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340414 BINDING SITE1 and LOC340414 BINDING SITE2, designated SEQ ID:7368 and SEQ ID:13658 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44755] Another function of GAM3229 is therefore inhibition of LOC340414 (Accession XP_295240.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340414.

[44756] LOC340494 (Accession XP_290428.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC340494 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340494, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340494 BINDING SITE, desig-

nated SEQ ID:19097, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44757] Another function of GAM3229 is therefore inhibition of LOC340494 (Accession XP_290428.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340494.

[44758] LOC340512 (Accession XP_295262.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC340512 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC340512, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340512 BINDING SITE, designated SEQ ID:9452, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44759] Another function of GAM3229 is therefore inhibition of LOC340512 (Accession XP_295262.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC340512.

[44760] LOC340528 (Accession XP_295268.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC340528 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC340528, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340528 BINDING SITE, designated SEQ ID:14406, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44761] Another function of GAM3229 is therefore inhibition of LOC340528 (Accession XP_295268.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340528.

[44762] LOC342926 (Accession XP_292790.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC342926 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC342926, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC342926 BINDING SITE, designated SEQ ID:10075, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44763] Another function of GAM3229 is therefore inhibition of LOC342926 (Accession XP_292790.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC342926.

[44764] LOC343803 (Accession XP_297895.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC343803 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC343803, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC343803 BINDING SITE, designated SEQ ID:14285, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44765] Another function of GAM3229 is therefore inhibition of LOC343803 (Accession XP_297895.1) . Accordingly, utili-

ties of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC343803.

[44766] LOC346653 (Accession XP_294357.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC346653 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC346653, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC346653 BINDING SITE, designated SEQ ID:19528, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44767] Another function of GAM3229 is therefore inhibition of LOC346653 (Accession XP_294357.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC346653.

[44768] LOC347848 (Accession XP_302609.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC347848 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by

LOC347848, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC347848 BINDING SITE, designated SEQ ID:16961, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44769] Another function of GAM3229 is therefore inhibition of LOC347848 (Accession XP_302609.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC347848.

[44770] LOC347918 (Accession XP_300565.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC347918 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC347918, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC347918 BINDING SITE, designated SEQ ID:955, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44771] Another function of GAM3229 is therefore inhibition of LOC347918 (Accession XP_300565.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC347918.

[44772] LOC348094 (Accession XP_300615.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC348094 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348094, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348094 BINDING SITE, designated SEQ ID:16020, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44773] Another function of GAM3229 is therefore inhibition of LOC348094 (Accession XP_300615.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348094.

[44774] LOC348113 (Accession XP_300623.1) is another GAM3229 target gene, herein designated TARGET GENE.

LOC348113 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348113, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348113 BINDING SITE, designated SEQ ID:1069, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44775] Another function of GAM3229 is therefore inhibition of LOC348113 (Accession XP_300623.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348113.

[44776] LOC348137 (Accession XP_300635.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC348137 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348137, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348137 BINDING SITE, designated SEQ ID:1069, to the nucleotide sequence of

GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44777] Another function of GAM3229 is therefore inhibition of LOC348137 (Accession XP_300635.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348137.

[44778] LOC348142 (Accession XP_300636.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC348142 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348142, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348142 BINDING SITE, designated SEQ ID:1069, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44779] Another function of GAM3229 is therefore inhibition of LOC348142 (Accession XP_300636.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348142.

[44780] LOC348235 (Accession XP_300670.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC348235 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348235, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348235 BINDING SITE, designated SEQ ID:16390, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44781] Another function of GAM3229 is therefore inhibition of LOC348235 (Accession XP_300670.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348235.

[44782] LOC348262 (Accession XP_300683.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC348262 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348262, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC348262 BINDING SITE, designated SEQ ID:19609, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44783] Another function of GAM3229 is therefore inhibition of LOC348262 (Accession XP_300683.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348262.

[44784] LOC348378 (Accession XP_300723.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC348378 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348378, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348378 BINDING SITE, designated SEQ ID:10183, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44785] Another function of GAM3229 is therefore inhibition of LOC348378 (Accession XP_300723.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC348378.

[44786] LOC348393 (Accession XP_302741.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC348393 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348393, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348393 BINDING SITE, designated SEQ ID:10000, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44787] Another function of GAM3229 is therefore inhibition of LOC348393 (Accession XP_302741.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348393.

[44788] LOC348396 (Accession XP_300729.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC348396 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348396, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348396 BINDING SITE, designated SEQ ID:17091, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44789] Another function of GAM3229 is therefore inhibition of LOC348396 (Accession XP_300729.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348396.

[44790] LOC348402 (Accession XP_300730.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC348402 BINDING SITE1 and LOC348402 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC348402, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348402 BINDING SITE1 and LOC348402 BINDING SITE2, designated SEQ ID:3503 and SEQ ID:1590 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44791] Another function of GAM3229 is therefore inhibition of LOC348402 (Accession XP_300730.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348402.

[44792] LOC348474 (Accession XP_209299.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC348474 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348474, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348474 BINDING SITE, designated SEQ ID:13205, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44793] Another function of GAM3229 is therefore inhibition of LOC348474 (Accession XP_209299.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348474.

[44794] LOC348488 (Accession XP_300352.1) is another GAM3229 target gene, herein designated TARGET GENE.

LOC348488 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348488, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348488 BINDING SITE, designated SEQ ID:7579, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44795] Another function of GAM3229 is therefore inhibition of LOC348488 (Accession XP_300352.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348488.

[44796] LOC348503 (Accession XP_300762.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC348503 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348503, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348503 BINDING SITE, designated SEQ ID:14079, to the nucleotide sequence of

GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44797] Another function of GAM3229 is therefore inhibition of LOC348503 (Accession XP_300762.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348503.

[44798] LOC348504 (Accession XP_300769.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC348504 BINDING SITE1 and LOC348504 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC348504, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348504 BINDING SITE1 and LOC348504 BINDING SITE2, designated SEQ ID:542 and SEQ ID:7507 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44799] Another function of GAM3229 is therefore inhibition of LOC348504 (Accession XP_300769.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC348504.

[44800] LOC348508 (Accession XP_302806.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC348508 BINDING SITE1 and LOC348508 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC348508, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348508 BINDING SITE1 and LOC348508 BINDING SITE2, designated SEQ ID:8135 and SEQ ID:9877 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44801] Another function of GAM3229 is therefore inhibition of LOC348508 (Accession XP_302806.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348508.

[44802] LOC348532 (Accession XP_302818.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC348532 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348532, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348532 BINDING SITE, designated SEQ ID:10000, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44803] Another function of GAM3229 is therefore inhibition of LOC348532 (Accession XP_302818.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348532.

[44804] LOC348567 (Accession XP_300378.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC348567 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348567, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348567 BINDING SITE, designated SEQ ID:10075, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44805] Another function of GAM3229 is therefore inhibition of

LOC348567 (Accession XP_300378.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348567.

[44806] LOC348687 (Accession XP_302853.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC348687 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348687, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348687 BINDING SITE, designated SEQ ID:4582, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44807] Another function of GAM3229 is therefore inhibition of LOC348687 (Accession XP_302853.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348687.

[44808] LOC348790 (Accession XP_300843.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC348790 BINDING SITE is a target binding site found in

the 3` untranslated region of mRNA encoded by LOC348790, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348790 BINDING SITE, designated SEQ ID:18680, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44809] Another function of GAM3229 is therefore inhibition of LOC348790 (Accession XP_300843.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348790.

[44810] LOC348797 (Accession XP_302888.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC348797 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348797, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348797 BINDING SITE, designated SEQ ID:750, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:221.

[44811] Another function of GAM3229 is therefore inhibition of LOC348797 (Accession XP_302888.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348797.

[44812] LOC348842 (Accession XP_300861.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC348842 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348842, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348842 BINDING SITE, designated SEQ ID:9877, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44813] Another function of GAM3229 is therefore inhibition of LOC348842 (Accession XP_300861.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348842.

[44814] LOC348843 (Accession XP_302903.1) is another

GAM3229 target gene, herein designated TARGET GENE. LOC348843 BINDING SITE1 and LOC348843 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC348843, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348843 BINDING SITE1 and LOC348843 BINDING SITE2, designated SEQ ID:542 and SEQ ID:7507 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44815] Another function of GAM3229 is therefore inhibition of LOC348843 (Accession XP_302903.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348843.

[44816] LOC348909 (Accession XP_300875.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC348909 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348909, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC348909 BINDING SITE, designated SEQ ID:9882, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44817] Another function of GAM3229 is therefore inhibition of LOC348909 (Accession XP_300875.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348909.

[44818] LOC348938 (Accession XP_300883.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC348938 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348938, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348938 BINDING SITE, designated SEQ ID:15195, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44819] Another function of GAM3229 is therefore inhibition of LOC348938 (Accession XP_300883.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC348938.

[44820] LOC348995 (Accession XP_300434.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC348995 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348995, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348995 BINDING SITE, designated SEQ ID:6161, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44821] Another function of GAM3229 is therefore inhibition of LOC348995 (Accession XP_300434.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348995.

[44822] LOC349075 (Accession XP_300932.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC349075 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC349075, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349075 BINDING SITE, designated SEQ ID:8631, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44823] Another function of GAM3229 is therefore inhibition of LOC349075 (Accession XP_300932.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349075.

[44824] LOC349101 (Accession XP_173186.2) is another GAM3229 target gene, herein designated TARGET GENE. LOC349101 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC349101, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349101 BINDING SITE, designated SEQ ID:3432, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44825] Another function of GAM3229 is therefore inhibition of

LOC349101 (Accession XP_173186.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349101.

[44826] LOC349169 (Accession XP_302978.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC349169 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC349169, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349169 BINDING SITE, designated SEQ ID:7284, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44827] Another function of GAM3229 is therefore inhibition of LOC349169 (Accession XP_302978.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349169.

[44828] LOC349170 (Accession XP_300969.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC349170 BINDING SITE1 through LOC349170 BINDING

SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC349170, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349170 BINDING SITE1 through LOC349170 BINDING SITE3, designated SEQ ID:14615, SEQ ID:20159 and SEQ ID:20022 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44829] Another function of GAM3229 is therefore inhibition of LOC349170 (Accession XP_300969.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349170.

[44830] LOC349236 (Accession XP_300988.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC349236 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC349236, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349236 BINDING SITE, desig-

nated SEQ ID:17381, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44831] Another function of GAM3229 is therefore inhibition of LOC349236 (Accession XP_300988.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349236.

[44832] LOC349261 (Accession XP_300998.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC349261 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC349261, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349261 BINDING SITE, designated SEQ ID:2783, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44833] Another function of GAM3229 is therefore inhibition of LOC349261 (Accession XP_300998.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC349261.

[44834] LOC349360 (Accession XP_088528.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC349360 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC349360, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349360 BINDING SITE, designated SEQ ID:6478, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44835] Another function of GAM3229 is therefore inhibition of LOC349360 (Accession XP_088528.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349360.

[44836] LOC349430 (Accession XP_301084.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC349430 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC349430, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349430 BINDING SITE, designated SEQ ID:6220, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44837] Another function of GAM3229 is therefore inhibition of LOC349430 (Accession XP_301084.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349430.

[44838] LOC349440 (Accession XP_300513.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC349440 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC349440, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349440 BINDING SITE, designated SEQ ID:9876, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44839] Another function of GAM3229 is therefore inhibition of LOC349440 (Accession XP_300513.1) . Accordingly, utili-

ties of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349440.

[44840] LOC51193 (Accession NP_057415.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC51193 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC51193, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC51193 BINDING SITE, designated SEQ ID:4293, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44841] Another function of GAM3229 is therefore inhibition of LOC51193 (Accession NP_057415.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51193.

[44842] LOC55954 (Accession NP_061976.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC55954 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC55954, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC55954 BINDING SITE, designated SEQ ID:5283, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44843] Another function of GAM3229 is therefore inhibition of LOC55954 (Accession NP_061976.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC55954.

[44844] LOC90408 (Accession XP_031517.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC90408 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC90408, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90408 BINDING SITE, designated SEQ ID:16149, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44845] Another function of GAM3229 is therefore inhibition of LOC90408 (Accession XP_031517.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC90408.

[44846] LOC90485 (Accession XP_032059.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC90485 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC90485, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90485 BINDING SITE, designated SEQ ID:2914, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44847] Another function of GAM3229 is therefore inhibition of LOC90485 (Accession XP_032059.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90485.

[44848] LOC91250 (Accession XP_037135.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC91250 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC91250, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of LOC91250 BINDING SITE, designated SEQ ID:18320, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44849] Another function of GAM3229 is therefore inhibition of LOC91250 (Accession XP_037135.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91250.

[44850] LOC92597 (Accession NP_775739.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC92597 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC92597, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC92597 BINDING SITE, designated SEQ ID:4501, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44851] Another function of GAM3229 is therefore inhibition of LOC92597 (Accession NP_775739.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC92597.

[44852] LOC93463 (Accession XP_051528.1) is another GAM3229 target gene, herein designated TARGET GENE. LOC93463 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC93463, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC93463 BINDING SITE, designated SEQ ID:1098, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44853] Another function of GAM3229 is therefore inhibition of LOC93463 (Accession XP_051528.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC93463.

[44854] Low density lipoprotein receptor-related protein 4 (LRP4, Accession XP_035037.2) is another GAM3229 target gene, herein designated TARGET GENE. LRP4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LRP4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementar-

ity of the nucleotide sequences of LRP4 BINDING SITE, designated SEQ ID:16726, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44855] Another function of GAM3229 is therefore inhibition of Low density lipoprotein receptor-related protein 4 (LRP4, Accession XP_035037.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LRP4.

[44856] Lymphocyte antigen 6 complex, locus g6c (LY6G6C, Accession NP_079537.1) is another GAM3229 target gene, herein designated TARGET GENE. LY6G6C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LY6G6C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LY6G6C BINDING SITE, designated SEQ ID:11181, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44857] Another function of GAM3229 is therefore inhibition of Lymphocyte antigen 6 complex, locus g6c (LY6G6C, Accession NP_079537.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LY6G6C.

[44858] Leucine zipper, putative tumor suppressor 1 (LZTS1, Accession NP_066300.1) is another GAM3229 target gene, herein designated TARGET GENE. LZTS1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LZTS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LZTS1 BINDING SITE, designated SEQ ID:1073, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44859] Another function of GAM3229 is therefore inhibition of Leucine zipper, putative tumor suppressor 1 (LZTS1, Accession NP_066300.1), a gene which is an essential component of the nucleoskeleton. potential role in crosslinking filaments or anchoring other molecules. it is essential for growth. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical

conditions associated with LZTS1.

[44860] The function of LZTS1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.MAC30 (Accession XP_031536.2) is another GAM3229 target gene, herein designated TARGET GENE. MAC30 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MAC30, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAC30 BINDING SITE, designated SEQ ID:15124, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44861] Another function of GAM3229 is therefore inhibition of MAC30 (Accession XP_031536.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAC30.

[44862] Mannosidase, beta a, lysosomal-like (MANBAL, Accession NP_071360.1) is another GAM3229 target gene, herein designated TARGET GENE. MANBAL BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MANBAL, corresponding to a target

binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MANBAL BINDING SITE, designated SEQ ID:18033, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44863] Another function of GAM3229 is therefore inhibition of Mannosidase, beta a, lysosomal-like (MANBAL, Accession NP_071360.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MANBAL.

[44864] Microtubule-associated protein 1 light chain 3 beta (MAP1LC3B, Accession NP_073729.1) is another GAM3229 target gene, herein designated TARGET GENE. MAP1LC3B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MAP1LC3B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAP1LC3B BINDING SITE, designated SEQ ID:18525, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44865] Another function of GAM3229 is therefore inhibition of

Microtubule-associated protein 1 light chain 3 beta (MAP1LC3B, Accession NP_073729.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAP1LC3B.

[44866] MAPA (Accession NP_660299.1) is another GAM3229 target gene, herein designated TARGET GENE. MAPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MAPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAPA BINDING SITE, designated SEQ ID:17799, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44867] Another function of GAM3229 is therefore inhibition of MAPA (Accession NP_660299.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAPA.

[44868] Microtubule-associated protein tau (MAPT, Accession NP_776088.1) is another GAM3229 target gene, herein designated TARGET GENE. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multi-

ple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAPT BINDING SITE, designated SEQ ID:18784, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44869] Another function of GAM3229 is therefore inhibition of Microtubule-associated protein tau (MAPT, Accession NP_776088.1), a gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Frontotemporal dementia, pallidopontonigral degeneration, pick disease- like dementia, pick disease. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Frontotemporal dementia, pallidopontonigral degeneration, pick disease- like dementia, pick disease, and of other diseases and clinical conditions associated with MAPT.

[44870] The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM200.2.Map/microtubule affinity-regulating kinase 2 (MARK2, Accession NP_059672.1) is another GAM3229

target gene, herein designated TARGET GENE. MARK2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MARK2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MARK2 BINDING SITE, designated SEQ ID:8182, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44871] Another function of GAM3229 is therefore inhibition of Map/microtubule affinity-regulating kinase 2 (MARK2, Accession NP_059672.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MARK2.

[44872] Map/microtubule affinity-regulating kinase 2 (MARK2, Accession NP_004945.2) is another GAM3229 target gene, herein designated TARGET GENE. MARK2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MARK2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of MARK2 BINDING SITE, designated SEQ ID:8182, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44873] Another function of GAM3229 is therefore inhibition of Map/microtubule affinity-regulating kinase 2 (MARK2, Accession NP_004945.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MARK2.

[44874] Mcm10 minichromosome maintenance deficient 10 (s. cerevisiae) (MCM10, Accession NP_060988.2) is another GAM3229 target gene, herein designated TARGET GENE. MCM10 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MCM10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MCM10 BINDING SITE, designated SEQ ID:6797, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44875] Another function of GAM3229 is therefore inhibition of Mcm10 minichromosome maintenance deficient 10 (s. cerevisiae) (MCM10, Accession NP_060988.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention

and treatment of diseases and clinical conditions associated with MCM10.

[44876] Mediterranean fever (MEFV, Accession NP_000234.1) is another GAM3229 target gene, herein designated TARGET GENE. MEFV BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MEFV, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MEFV BINDING SITE, designated SEQ ID:5889, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44877] Another function of GAM3229 is therefore inhibition of Mediterranean fever (MEFV, Accession NP_000234.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MEFV.

[44878] MGC10200 (Accession NP_659497.1) is another GAM3229 target gene, herein designated TARGET GENE. MGC10200 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC10200, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of MGC10200 BINDING SITE, designated SEQ ID:5932, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44879] Another function of GAM3229 is therefore inhibition of MGC10200 (Accession NP_659497.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC10200.

[44880] MGC10818 (Accession NP_085045.2) is another GAM3229 target gene, herein designated TARGET GENE. MGC10818 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC10818, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC10818 BINDING SITE, designated SEQ ID:14416, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44881] Another function of GAM3229 is therefore inhibition of MGC10818 (Accession NP_085045.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

MGC10818.

[44882] MGC10986 (Accession NP_085053.1) is another GAM3229 target gene, herein designated TARGET GENE. MGC10986 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC10986, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC10986 BINDING SITE, designated SEQ ID:6559, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44883] Another function of GAM3229 is therefore inhibition of MGC10986 (Accession NP_085053.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC10986.

[44884] MGC11386 (Accession NP_116322.1) is another GAM3229 target gene, herein designated TARGET GENE. MGC11386 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC11386, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

MGC11386 BINDING SITE, designated SEQ ID:4993, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44885] Another function of GAM3229 is therefore inhibition of MGC11386 (Accession NP_116322.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC11386.

[44886] MGC13024 (Accession NP_689501.1) is another GAM3229 target gene, herein designated TARGET GENE. MGC13024 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC13024, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC13024 BINDING SITE, designated SEQ ID:16302, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44887] Another function of GAM3229 is therefore inhibition of MGC13024 (Accession NP_689501.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC13024.

[44888] MGC13138 (Accession NP_219363.1) is another GAM3229 target gene, herein designated TARGET GENE. MGC13138 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC13138, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC13138 BINDING SITE, designated SEQ ID:10825, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44889] Another function of GAM3229 is therefore inhibition of MGC13138 (Accession NP_219363.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC13138.

[44890] MGC14289 (Accession NP_542391.1) is another GAM3229 target gene, herein designated TARGET GENE. MGC14289 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC14289, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC14289 BINDING SITE, designated SEQ ID:13575, to

the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44891] Another function of GAM3229 is therefore inhibition of MGC14289 (Accession NP_542391.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC14289.

[44892] MGC14386 (Accession NP_291022.1) is another GAM3229 target gene, herein designated TARGET GENE. MGC14386 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC14386, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC14386 BINDING SITE, designated SEQ ID:10978, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44893] Another function of GAM3229 is therefore inhibition of MGC14386 (Accession NP_291022.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC14386.

[44894] MGC14836 (Accession NP_219480.1) is another GAM3229

target gene, herein designated TARGET GENE. MGC14836 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC14836, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC14836 BINDING SITE, designated SEQ ID:12819, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44895] Another function of GAM3229 is therefore inhibition of MGC14836 (Accession NP_219480.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC14836.

[44896] MGC15606 (Accession NP_659474.1) is another GAM3229 target gene, herein designated TARGET GENE. MGC15606 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC15606, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC15606 BINDING SITE, designated SEQ ID:9411, to the nucleotide sequence of GAM3229 RNA, herein designated

GAM RNA, also designated SEQ ID:221.

[44897] Another function of GAM3229 is therefore inhibition of MGC15606 (Accession NP_659474.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC15606.

[44898] MGC21675 (Accession NP_443093.1) is another GAM3229 target gene, herein designated TARGET GENE. MGC21675 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC21675, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC21675 BINDING SITE, designated SEQ ID:1835, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44899] Another function of GAM3229 is therefore inhibition of MGC21675 (Accession NP_443093.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC21675.

[44900] MGC2452 (Accession NP_116033.1) is another GAM3229 target gene, herein designated TARGET GENE. MGC2452

BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC2452, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC2452 BINDING SITE, designated SEQ ID:6351, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44901] Another function of GAM3229 is therefore inhibition of MGC2452 (Accession NP_116033.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC2452.

[44902] MGC2474 (Accession NP_076420.1) is another GAM3229 target gene, herein designated TARGET GENE. MGC2474 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC2474, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC2474 BINDING SITE, designated SEQ ID:5948, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44903] Another function of GAM3229 is therefore inhibition of MGC2474 (Accession NP_076420.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC2474.

[44904] MGC26979 (Accession NP_714915.1) is another GAM3229 target gene, herein designated TARGET GENE. MGC26979 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC26979, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC26979 BINDING SITE, designated SEQ ID:15483, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44905] Another function of GAM3229 is therefore inhibition of MGC26979 (Accession NP_714915.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC26979.

[44906] MGC27345 (Accession XP_300964.1) is another GAM3229 target gene, herein designated TARGET GENE. MGC27345 BINDING SITE1 and MGC27345 BINDING SITE2 are target

binding sites found in untranslated regions of multiple transcripts of mRNA encoded by MGC27345, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC27345 BINDING SITE1 and MGC27345 BINDING SITE2, designated SEQ ID:10537 and SEQ ID:8394 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44907] Another function of GAM3229 is therefore inhibition of MGC27345 (Accession XP_300964.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC27345.

[44908] MGC27345 (Accession NP_787076.1) is another GAM3229 target gene, herein designated TARGET GENE. MGC27345 BINDING SITE1 and MGC27345 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by MGC27345, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC27345 BINDING SITE1 and MGC27345 BINDING SITE2,

designated SEQ ID:10537 and SEQ ID:10712 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44909] Another function of GAM3229 is therefore inhibition of MGC27345 (Accession NP_787076.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC27345.

[44910] MGC3113 (Accession NP_076940.1) is another GAM3229 target gene, herein designated TARGET GENE. MGC3113 BINDING SITE1 and MGC3113 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MGC3113, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC3113 BINDING SITE1 and MGC3113 BINDING SITE2, designated SEQ ID:2387 and SEQ ID:18526 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44911] Another function of GAM3229 is therefore inhibition of MGC3113 (Accession NP_076940.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with MGC3113.

[44912] MGC33637 (Accession NP_689809.1) is another GAM3229 target gene, herein designated TARGET GENE. MGC33637 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC33637, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC33637 BINDING SITE, designated SEQ ID:10075, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44913] Another function of GAM3229 is therefore inhibition of MGC33637 (Accession NP_689809.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC33637.

[44914] MGC34132 (Accession XP_291029.1) is another GAM3229 target gene, herein designated TARGET GENE. MGC34132 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC34132, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of MGC34132 BINDING SITE, designated SEQ ID:17411, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44915] Another function of GAM3229 is therefore inhibition of MGC34132 (Accession XP_291029.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC34132.

[44916] MGC35163 (Accession NP_689765.1) is another GAM3229 target gene, herein designated TARGET GENE. MGC35163 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC35163, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC35163 BINDING SITE, designated SEQ ID:2119, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44917] Another function of GAM3229 is therefore inhibition of MGC35163 (Accession NP_689765.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

MGC35163.

[44918] MGC35308 (Accession NP_787118.1) is another GAM3229 target gene, herein designated TARGET GENE. MGC35308 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC35308, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC35308 BINDING SITE, designated SEQ ID:14998, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44919] Another function of GAM3229 is therefore inhibition of MGC35308 (Accession NP_787118.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC35308.

[44920] MGC35468 (Accession NP_694976.1) is another GAM3229 target gene, herein designated TARGET GENE. MGC35468 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC35468, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

MGC35468 BINDING SITE, designated SEQ ID:12471, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44921] Another function of GAM3229 is therefore inhibition of MGC35468 (Accession NP_694976.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC35468.

[44922] MGC46336 (Accession XP_290712.1) is another GAM3229 target gene, herein designated TARGET GENE. MGC46336 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC46336, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC46336 BINDING SITE, designated SEQ ID:8629, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44923] Another function of GAM3229 is therefore inhibition of MGC46336 (Accession XP_290712.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC46336.

[44924] MGC50337 (Accession NP_848604.1) is another GAM3229 target gene, herein designated TARGET GENE. MGC50337 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC50337, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC50337 BINDING SITE, designated SEQ ID:17884, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44925] Another function of GAM3229 is therefore inhibition of MGC50337 (Accession NP_848604.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC50337.

[44926] MGC5149 (Accession XP_051200.2) is another GAM3229 target gene, herein designated TARGET GENE. MGC5149 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC5149, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC5149 BINDING SITE, designated SEQ ID:940, to the

nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44927] Another function of GAM3229 is therefore inhibition of MGC5149 (Accession XP_051200.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC5149.

[44928] MGC9726 (Accession NP_796377.1) is another GAM3229 target gene, herein designated TARGET GENE. MGC9726 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC9726, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC9726 BINDING SITE, designated SEQ ID:18506, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44929] Another function of GAM3229 is therefore inhibition of MGC9726 (Accession NP_796377.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC9726.

[44930] Mhc class ii transactivator (MHC2TA, Accession

NP_000237.1) is another GAM3229 target gene, herein designated TARGET GENE. MHC2TA BINDING SITE1 and MHC2TA BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MHC2TA, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MHC2TA BINDING SITE1 and MHC2TA BINDING SITE2, designated SEQ ID:12501 and SEQ ID:14620 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44931] Another function of GAM3229 is therefore inhibition of Mhc class ii transactivator (MHC2TA, Accession NP_000237.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MHC2TA.

[44932] Mhc class i polypeptide-related sequence b (MICB, Accession NP_005922.1) is another GAM3229 target gene, herein designated TARGET GENE. MICB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MICB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementar-

ity of the nucleotide sequences of MICB BINDING SITE, designated SEQ ID:11538, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44933] Another function of GAM3229 is therefore inhibition of Mhc class i polypeptide-related sequence b (MICB, Accession NP_005922.1), a gene which involved in the presentation of foreign antigens to the immune system. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MICB.

[44934] The function of MICB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM258.1.MIDORI (Accession NP_065829.1) is another GAM3229 target gene, herein designated TARGET GENE. MIDORI BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MIDORI, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MIDORI BINDING SITE, designated SEQ ID:7016, to the nucleotide sequence of GAM3229 RNA, herein designated

GAM RNA, also designated SEQ ID:221.

[44935] Another function of GAM3229 is therefore inhibition of MIDORI (Accession NP_065829.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MIDORI.

[44936] MIZF (Accession NP_056332.1) is another GAM3229 target gene, herein designated TARGET GENE. MIZF BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MIZF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MIZF BINDING SITE, designated SEQ ID:6430, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44937] Another function of GAM3229 is therefore inhibition of MIZF (Accession NP_056332.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MIZF.

[44938] Melan-a (MLANA, Accession NP_005502.1) is another GAM3229 target gene, herein designated TARGET GENE. MLANA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MLANA, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MLANA BINDING SITE, designated SEQ ID:12846, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44939] Another function of GAM3229 is therefore inhibition of Melan-a (MLANA, Accession NP_005502.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MLANA.

[44940] Melanoma-derived leucine zipper, extra-nuclear factor (MLZE, Accession NP_113603.1) is another GAM3229 target gene, herein designated TARGET GENE. MLZE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MLZE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MLZE BINDING SITE, designated SEQ ID:2064, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44941] Another function of GAM3229 is therefore inhibition of

Melanoma-derived leucine zipper, extra-nuclear factor (MLZE, Accession NP_113603.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MLZE.

[44942] Matrix metalloproteinase-like 1 (MMPL1, Accession NP_004133.1) is another GAM3229 target gene, herein designated TARGET GENE. MMPL1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MMPL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MMPL1 BINDING SITE, designated SEQ ID:18579, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44943] Another function of GAM3229 is therefore inhibition of Matrix metalloproteinase-like 1 (MMPL1, Accession NP_004133.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MMPL1.

[44944] Mitochondrial ribosomal protein l30 (MRPL30, Accession NP_660213.1) is another GAM3229 target gene, herein designated TARGET GENE. MRPL30 BINDING SITE1 and

MRPL30 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by MRPL30, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRPL30 BINDING SITE1 and MRPL30 BINDING SITE2, designated SEQ ID:4263 and SEQ ID:4509 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44945] Another function of GAM3229 is therefore inhibition of Mitochondrial ribosomal protein l30 (MRPL30, Accession NP_660213.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPL30.

[44946] Mitochondrial ribosomal protein s27 (MRPS27, Accession NP_055899.1) is another GAM3229 target gene, herein designated TARGET GENE. MRPS27 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MRPS27, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRPS27 BINDING

SITE, designated SEQ ID:10070, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44947] Another function of GAM3229 is therefore inhibition of Mitochondrial ribosomal protein s27 (MRPS27, Accession NP_055899.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPS27.

[44948] MRS3/4 (Accession NP_112489.2) is another GAM3229 target gene, herein designated TARGET GENE. MRS3/4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MRS3/4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRS3/4 BINDING SITE, designated SEQ ID:7253, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44949] Another function of GAM3229 is therefore inhibition of MRS3/4 (Accession NP_112489.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRS3/4.

[44950] MtFMT (Accession NP_640335.1) is another GAM3229 target gene, herein designated TARGET GENE. MtFMT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MtFMT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MtFMT BINDING SITE, designated SEQ ID:6398, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44951] Another function of GAM3229 is therefore inhibition of MtFMT (Accession NP_640335.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MtFMT.

[44952] MTH2 (Accession NP_060753.1) is another GAM3229 target gene, herein designated TARGET GENE. MTH2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTH2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MTH2 BINDING SITE, designated SEQ ID:18725, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA,

also designated SEQ ID:221.

[44953] Another function of GAM3229 is therefore inhibition of MTH2 (Accession NP_060753.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MTH2.

[44954] MYLC2PL (Accession NP_612412.1) is another GAM3229 target gene, herein designated TARGET GENE. MYLC2PL BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MYLC2PL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MYLC2PL BINDING SITE, designated SEQ ID:13697, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44955] Another function of GAM3229 is therefore inhibition of MYLC2PL (Accession NP_612412.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MYLC2PL.

[44956] Myosin 5c (MYO5C, Accession NP_061198.1) is another GAM3229 target gene, herein designated TARGET GENE. MYO5C BINDING SITE is a target binding site found in the

3` untranslated region of mRNA encoded by MYO5C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MYO5C BINDING SITE, designated SEQ ID:12851, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44957] Another function of GAM3229 is therefore inhibition of Myosin 5c (MYO5C, Accession NP_061198.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MYO5C.

[44958] N-ethylmaleimide-sensitive factor attachment protein, alpha (NAPA, Accession NP_003818.1) is another GAM3229 target gene, herein designated TARGET GENE. NAPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NAPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NAPA BINDING SITE, designated SEQ ID:5619, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44959] Another function of GAM3229 is therefore inhibition of N-ethylmaleimide-sensitive factor attachment protein, alpha (NAPA, Accession NP_003818.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NAPA.

[44960] Nuclear receptor coactivator 6 (NCOA6, Accession NP_054790.1) is another GAM3229 target gene, herein designated TARGET GENE. NCOA6 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by NCOA6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NCOA6 BINDING SITE, designated SEQ ID:18704, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44961] Another function of GAM3229 is therefore inhibition of Nuclear receptor coactivator 6 (NCOA6, Accession NP_054790.1), a gene which activates gene transcription through ligand- dependent association with coactivators. and therefore may be associated with Breast cancer. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Breast cancer., and of other diseases

and clinical conditions associated with NCOA6.

[44962] The function of NCOA6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM161.1.Nuclear receptor coactivator 6 interacting protein (NCOA6IP, Accession NP_079107.5) is another GAM3229 target gene, herein designated TARGET GENE. NCOA6IP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NCOA6IP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NCOA6IP BINDING SITE, designated SEQ ID:14417, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44963] Another function of GAM3229 is therefore inhibition of Nuclear receptor coactivator 6 interacting protein (NCOA6IP, Accession NP_079107.5) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NCOA6IP.

[44964] Nadh dehydrogenase (ubiquinone) 1, subcomplex unknown, 2, 14.5kda (NDUFC2, Accession NP_004540.1) is

another GAM3229 target gene, herein designated TARGET GENE. NDUFC2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NDUFC2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NDUFC2 BINDING SITE, designated SEQ ID:2783, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44965] Another function of GAM3229 is therefore inhibition of Nadh dehydrogenase (ubiquinone) 1, subcomplex unknown, 2, 14.5kda (NDUFC2, Accession NP_004540.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NDUFC2.

[44966] Neural precursor cell expressed, developmentally downregulated 4 (NEDD4, Accession XP_046129.4) is another GAM3229 target gene, herein designated TARGET GENE. NEDD4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NEDD4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of NEDD4 BINDING SITE, designated SEQ ID:16923, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44967] Another function of GAM3229 is therefore inhibition of Neural precursor cell expressed, developmentally down-regulated 4 (NEDD4, Accession XP_046129.4), a gene which ubiquitinates regulatory proteins involved in transcription. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NEDD4.

[44968] The function of NEDD4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM48.2.Nei like 2 (e. coli) (NEIL2, Accession NP_659480.1) is another GAM3229 target gene, herein designated TARGET GENE. NEIL2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NEIL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NEIL2 BINDING SITE, designated SEQ ID:9514, to the nucleotide sequence of GAM3229

RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44969] Another function of GAM3229 is therefore inhibition of Nei like 2 (e. coli) (NEIL2, Accession NP_659480.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NEIL2.

[44970] Neurogenic differentiation 1 (NEUROD1, Accession NP_002491.1) is another GAM3229 target gene, herein designated TARGET GENE. NEUROD1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NEUROD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NEUROD1 BINDING SITE, designated SEQ ID:14176, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44971] Another function of GAM3229 is therefore inhibition of Neurogenic differentiation 1 (NEUROD1, Accession NP_002491.1), a gene which acts as a differentiation factor during neurogenesis and therefore may be associated with Type ii diabetes mellitus. Accordingly, utilities of

GAM3229 include diagnosis, prevention and treatment of Type ii diabetes mellitus, and of other diseases and clinical conditions associated with NEUROD1.

[44972] The function of NEUROD1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1035.1.Neurofibromin 2 (bilateral acoustic neuroma) (NF2, Accession NP_057502.1) is another GAM3229 target gene, herein designated TARGET GENE. NF2 BINDING SITE1 and NF2 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by NF2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NF2 BINDING SITE1 and NF2 BINDING SITE2, designated SEQ ID:11182 and SEQ ID:8254 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44973] Another function of GAM3229 is therefore inhibition of Neurofibromin 2 (bilateral acoustic neuroma) (NF2, Accession NP_057502.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and

clinical conditions associated with NF2.

[44974] Nad(p)h dehydrogenase, quinone 1 (NQO1, Accession NP_000894.1) is another GAM3229 target gene, herein designated TARGET GENE. NQO1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NQO1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NQO1 BINDING SITE, designated SEQ ID:19166, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44975] Another function of GAM3229 is therefore inhibition of Nad(p)h dehydrogenase, quinone 1 (NQO1, Accession NP_000894.1), a gene which is cytochrome b5 reductase which reduces redox dyes and quinones. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NQO1.

[44976] The function of NQO1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.NUP43 (Accession NP_078923.2) is another

GAM3229 target gene, herein designated TARGET GENE. NUP43 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NUP43, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NUP43 BINDING SITE, designated SEQ ID:16948, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44977] Another function of GAM3229 is therefore inhibition of NUP43 (Accession NP_078923.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NUP43.

[44978] Opioid receptor, mu 1 (OPRM1, Accession NP_000905.1) is another GAM3229 target gene, herein designated TARGET GENE. OPRM1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OPRM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OPRM1 BINDING SITE, designated SEQ ID:17047, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ

ID:221.

[44979] Another function of GAM3229 is therefore inhibition of Opioid receptor, mu 1 (OPRM1, Accession NP_000905.1), a gene which inhibits neurotransmitter release by reducing calcium ion currents and increasing potassium ion conductance. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OPRM1.

[44980] The function of OPRM1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM883.1.Oxysterol binding protein-like 3 (OSBPL3, Accession NP_663164.1) is another GAM3229 target gene, herein designated TARGET GENE. OSBPL3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by OSBPL3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OSBPL3 BINDING SITE, designated SEQ ID:8465, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44981] Another function of GAM3229 is therefore inhibition of

Oxysterol binding protein-like 3 (OSBPL3, Accession NP_663164.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OSBPL3.

[44982] Oxysterol binding protein-like 3 (OSBPL3, Accession NP_663160.1) is another GAM3229 target gene, herein designated TARGET GENE. OSBPL3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by OSBPL3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OSBPL3 BINDING SITE, designated SEQ ID:8465, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44983] Another function of GAM3229 is therefore inhibition of Oxysterol binding protein-like 3 (OSBPL3, Accession NP_663160.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OSBPL3.

[44984] Oxysterol binding protein-like 3 (OSBPL3, Accession NP_663163.1) is another GAM3229 target gene, herein designated TARGET GENE. OSBPL3 BINDING SITE is a target

binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by OSBPL3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OSBPL3 BINDING SITE, designated SEQ ID:8465, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44985] Another function of GAM3229 is therefore inhibition of Oxysterol binding protein-like 3 (OSBPL3, Accession NP_663163.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OSBPL3.

[44986] Oxysterol binding protein-like 3 (OSBPL3, Accession NP_663161.1) is another GAM3229 target gene, herein designated TARGET GENE. OSBPL3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by OSBPL3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OSBPL3 BINDING SITE, designated SEQ ID:8465, to the nucleotide sequence of GAM3229 RNA, herein designated

GAM RNA, also designated SEQ ID:221.

[44987] Another function of GAM3229 is therefore inhibition of Oxysterol binding protein-like 3 (OSBPL3, Accession NP_663161.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OSBPL3.

[44988] Oxysterol binding protein-like 3 (OSBPL3, Accession NP_056365.1) is another GAM3229 target gene, herein designated TARGET GENE. OSBPL3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by OSBPL3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OSBPL3 BINDING SITE, designated SEQ ID:8465, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44989] Another function of GAM3229 is therefore inhibition of Oxysterol binding protein-like 3 (OSBPL3, Accession NP_056365.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OSBPL3.

[44990] Oxysterol binding protein-like 3 (OSBPL3, Accession

NP_663162.1) is another GAM3229 target gene, herein designated TARGET GENE. OSBPL3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by OSBPL3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OSBPL3 BINDING SITE, designated SEQ ID:8465, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44991] Another function of GAM3229 is therefore inhibition of Oxysterol binding protein-like 3 (OSBPL3, Accession NP_663162.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OSBPL3.

[44992] Oxysterol binding protein-like 8 (OSBPL8, Accession NP_065892.1) is another GAM3229 target gene, herein designated TARGET GENE. OSBPL8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OSBPL8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OSBPL8 BINDING SITE, desig-

nated SEQ ID:1446, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44993] Another function of GAM3229 is therefore inhibition of Oxysterol binding protein-like 8 (OSBPL8, Accession NP_065892.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OSBPL8.

[44994] Oncostatin m (OSM, Accession NP_065391.1) is another GAM3229 target gene, herein designated TARGET GENE. OSM BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OSM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OSM BINDING SITE, designated SEQ ID:15290, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44995] Another function of GAM3229 is therefore inhibition of Oncostatin m (OSM, Accession NP_065391.1), a gene which inhibits the proliferation of a number of tumor cell lines, caused an acute inflammatory reaction. Accordingly, utilities of GAM3229 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with OSM.

[44996] The function of OSM and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM65.2.Phosphoribosylaminoimidazole carboxylase, phosphoribosylaminoimidazole succinocarboxamide synthetase (PAICS, Accession NP_006443.1) is another GAM3229 target gene, herein designated TARGET GENE. PAICS BINDING SITE1 and PAICS BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PAICS, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PAICS BINDING SITE1 and PAICS BINDING SITE2, designated SEQ ID:963 and SEQ ID:12311 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44997] Another function of GAM3229 is therefore inhibition of Phosphoribosylaminoimidazole carboxylase, phosphoribosylaminoimidazole succinocarboxamide synthetase (PAICS, Accession NP_006443.1), a gene which is required

for purine biosynthesis. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PAICS.

[44998] The function of PAICS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM96.1.Protocadherin alpha 9 (PCDHA9, Accession NP_054724.1) is another GAM3229 target gene, herein designated TARGET GENE. PCDHA9 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PCDHA9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHA9 BINDING SITE, designated SEQ ID:2783, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[44999] Another function of GAM3229 is therefore inhibition of Protocadherin alpha 9 (PCDHA9, Accession NP_054724.1), a gene which is a calcium- dependent cell- adhesion protein. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHA9.

[45000] The function of PCDHA9 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Protocadherin beta 11 (PCDHB11, Accession NP_061754.1) is another GAM3229 target gene, herein designated TARGET GENE. PCDHB11 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PCDHB11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHB11 BINDING SITE, designated SEQ ID:3153, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45001] Another function of GAM3229 is therefore inhibition of Protocadherin beta 11 (PCDHB11, Accession NP_061754.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHB11.

[45002] Protocadherin beta 16 (PCDHB16, Accession NP_066008.1) is another GAM3229 target gene, herein designated TARGET GENE. PCDHB16 BINDING SITE is a target binding site found in the 3` untranslated region of

mRNA encoded by PCDHB16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHB16 BINDING SITE, designated SEQ ID:5101, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45003] Another function of GAM3229 is therefore inhibition of Protocadherin beta 16 (PCDHB16, Accession NP_066008.1), a gene which is a potential calcium- dependent cell- adhesion protein. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHB16.

[45004] The function of PCDHB16 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Protocadherin gamma subfamily a, 1 (PCDHGA1, Accession NP_061735.1) is another GAM3229 target gene, herein designated TARGET GENE. PCDHGA1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PCDHGA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of PCDHGA1 BINDING SITE, designated SEQ ID:11054, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45005] Another function of GAM3229 is therefore inhibition of Protocadherin gamma subfamily a, 1 (PCDHGA1, Accession NP_061735.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGA1.

[45006] Protocadherin gamma subfamily a, 10 (PCDHGA10, Accession NP_061736.1) is another GAM3229 target gene, herein designated TARGET GENE. PCDHGA10 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PCDHGA10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGA10 BINDING SITE, designated SEQ ID:11054, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45007] Another function of GAM3229 is therefore inhibition of Protocadherin gamma subfamily a, 10 (PCDHGA10, Accession NP_061736.1) . Accordingly, utilities of GAM3229 in-

clude diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGA10.

[45008] Protocadherin gamma subfamily a, 11 (PCDHGA11, Accession NP_061737.1) is another GAM3229 target gene, herein designated TARGET GENE. PCDHGA11 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PCDHGA11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGA11 BINDING SITE, designated SEQ ID:11054, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45009] Another function of GAM3229 is therefore inhibition of Protocadherin gamma subfamily a, 11 (PCDHGA11, Accession NP_061737.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGA11.

[45010] Protocadherin gamma subfamily a, 11 (PCDHGA11, Accession NP_114481.1) is another GAM3229 target gene, herein designated TARGET GENE. PCDHGA11 BINDING SITE is a target binding site found in the 3` untranslated re-

gion of multiple transcripts of mRNA encoded by PCDHGA11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGA11 BINDING SITE, designated SEQ ID:11054, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45011] Another function of GAM3229 is therefore inhibition of Protocadherin gamma subfamily a, 11 (PCDHGA11, Accession NP_114481.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGA11.

[45012] Protocadherin gamma subfamily a, 12 (PCDHGA12, Accession NP_003726.1) is another GAM3229 target gene, herein designated TARGET GENE. PCDHGA12 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PCDHGA12, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGA12 BINDING SITE, designated SEQ ID:11054, to the nucleotide sequence of

GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45013] Another function of GAM3229 is therefore inhibition of Protocadherin gamma subfamily a, 12 (PCDHGA12, Accession NP_003726.1), a gene which potential calcium- dependent cell- adhesion protein. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGA12.

[45014] The function of PCDHGA12 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM607.2.Protocadherin gamma subfamily a, 2 (PCDHGA2, Accession NP_061738.1) is another GAM3229 target gene, herein designated TARGET GENE. PCDHGA2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PCDHGA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGA2 BINDING SITE, designated SEQ ID:11054, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ

ID:221.

[45015] Another function of GAM3229 is therefore inhibition of Protocadherin gamma subfamily a, 2 (PCDHGA2, Accession NP_061738.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGA2.

[45016] Protocadherin gamma subfamily a, 3 (PCDHGA3, Accession NP_061739.2) is another GAM3229 target gene, herein designated TARGET GENE. PCDHGA3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PCDHGA3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGA3 BINDING SITE, designated SEQ ID:11054, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45017] Another function of GAM3229 is therefore inhibition of Protocadherin gamma subfamily a, 3 (PCDHGA3, Accession NP_061739.2), a gene which is a potential calcium-dependent cell- adhesion protein. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGA3.

[45018] The function of PCDHGA3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM607.2.Protocadherin gamma subfamily a, 4 (PCDHGA4, Accession NP_061740.1) is another GAM3229 target gene, herein designated TARGET GENE. PCDHGA4 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PCDHGA4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGA4 BINDING SITE, designated SEQ ID:11054, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45019] Another function of GAM3229 is therefore inhibition of Protocadherin gamma subfamily a, 4 (PCDHGA4, Accession NP_061740.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGA4.

[45020] Protocadherin gamma subfamily a, 5 (PCDHGA5, Accession NP_061741.1) is another GAM3229 target gene, herein designated TARGET GENE. PCDHGA5 BINDING SITE

is a target binding site found in the 3` untranslated region of mRNA encoded by PCDHGA5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGA5 BINDING SITE, designated SEQ ID:11054, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45021] Another function of GAM3229 is therefore inhibition of Protocadherin gamma subfamily a, 5 (PCDHGA5, Accession NP_061741.1), a gene which is a potential calcium-dependent cell- adhesion protein. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGA5.

[45022] The function of PCDHGA5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM607.2.Protocadherin gamma subfamily a, 6 (PCDHGA6, Accession NP_061742.1) is another GAM3229 target gene, herein designated TARGET GENE. PCDHGA6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PCDHGA6, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGA6 BINDING SITE, designated SEQ ID:11054, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45023] Another function of GAM3229 is therefore inhibition of Protocadherin gamma subfamily a, 6 (PCDHGA6, Accession NP_061742.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGA6.

[45024] Protocadherin gamma subfamily a, 7 (PCDHGA7, Accession NP_061743.1) is another GAM3229 target gene, herein designated TARGET GENE. PCDHGA7 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PCDHGA7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGA7 BINDING SITE, designated SEQ ID:11054, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45025] Another function of GAM3229 is therefore inhibition of

Protocadherin gamma subfamily a, 7 (PCDHGA7, Accession NP_061743.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGA7.

[45026] Protocadherin gamma subfamily a, 8 (PCDHGA8, Accession NP_114477.1) is another GAM3229 target gene, herein designated TARGET GENE. PCDHGA8 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PCDHGA8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGA8 BINDING SITE, designated SEQ ID:11054, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45027] Another function of GAM3229 is therefore inhibition of Protocadherin gamma subfamily a, 8 (PCDHGA8, Accession NP_114477.1), a gene which is a potential calcium-dependent cell- adhesion protein. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGA8.

[45028] The function of PCDHGA8 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM607.2.Protocadherin gamma subfamily a, 9 (PCDHGA9, Accession NP_061744.1) is another GAM3229 target gene, herein designated TARGET GENE. PCDHGA9 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PCDHGA9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGA9 BINDING SITE, designated SEQ ID:11054, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45029] Another function of GAM3229 is therefore inhibition of Protocadherin gamma subfamily a, 9 (PCDHGA9, Accession NP_061744.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGA9.

[45030] Protocadherin gamma subfamily b, 1 (PCDHGB1, Accession NP_061745.1) is another GAM3229 target gene, herein designated TARGET GENE. PCDHGB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PCDHGB1, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGB1 BINDING SITE, designated SEQ ID:11054, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45031] Another function of GAM3229 is therefore inhibition of Protocadherin gamma subfamily b, 1 (PCDHGB1, Accession NP_061745.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGB1.

[45032] Protocadherin gamma subfamily b, 2 (PCDHGB2, Accession NP_061746.1) is another GAM3229 target gene, herein designated TARGET GENE. PCDHGB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PCDHGB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGB2 BINDING SITE, designated SEQ ID:11054, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45033] Another function of GAM3229 is therefore inhibition of

Protocadherin gamma subfamily b, 2 (PCDHGB2, Accession NP_061746.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGB2.

[45034] Protocadherin gamma subfamily b, 3 (PCDHGB3, Accession NP_061747.1) is another GAM3229 target gene, herein designated TARGET GENE. PCDHGB3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PCDHGB3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGB3 BINDING SITE, designated SEQ ID:11054, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45035] Another function of GAM3229 is therefore inhibition of Protocadherin gamma subfamily b, 3 (PCDHGB3, Accession NP_061747.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGB3.

[45036] Protocadherin gamma subfamily b, 4 (PCDHGB4, Accession NP_003727.1) is another GAM3229 target gene, herein designated TARGET GENE. PCDHGB4 BINDING SITE

is a target binding site found in the 3` untranslated region of mRNA encoded by PCDHGB4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGB4 BINDING SITE, designated SEQ ID:11054, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45037] Another function of GAM3229 is therefore inhibition of Protocadherin gamma subfamily b, 4 (PCDHGB4, Accession NP_003727.1), a gene which is a potential calcium-dependent cell- adhesion protein. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGB4.

[45038] The function of PCDHGB4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM607.2.Protocadherin gamma subfamily b, 5 (PCDHGB5, Accession NP_061748.1) is another GAM3229 target gene, herein designated TARGET GENE. PCDHGB5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PCDHGB5, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGB5 BINDING SITE, designated SEQ ID:11054, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45039] Another function of GAM3229 is therefore inhibition of Protocadherin gamma subfamily b, 5 (PCDHGB5, Accession NP_061748.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGB5.

[45040] Protocadherin gamma subfamily b, 6 (PCDHGB6, Accession NP_061749.1) is another GAM3229 target gene, herein designated TARGET GENE. PCDHGB6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PCDHGB6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGB6 BINDING SITE, designated SEQ ID:11054, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45041] Another function of GAM3229 is therefore inhibition of Protocadherin gamma subfamily b, 6 (PCDHGB6, Acces-

sion NP_061749.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGB6.

[45042] Protocadherin gamma subfamily b, 7 (PCDHGB7, Accession NP_061750.1) is another GAM3229 target gene, herein designated TARGET GENE. PCDHGB7 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PCDHGB7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGB7 BINDING SITE, designated SEQ ID:11054, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45043] Another function of GAM3229 is therefore inhibition of Protocadherin gamma subfamily b, 7 (PCDHGB7, Accession NP_061750.1), a gene which is a potential calcium-dependent cell- adhesion protein. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGB7.

[45044] The function of PCDHGB7 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM607.2.Protocadherin gamma subfamily c, 3 (PCDHGC3, Accession NP_115779.1) is another GAM3229 target gene, herein designated TARGET GENE. PCDHGC3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PCDHGC3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGC3 BINDING SITE, designated SEQ ID:11054, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45045] Another function of GAM3229 is therefore inhibition of Protocadherin gamma subfamily c, 3 (PCDHGC3, Accession NP_115779.1), a gene which is a potential calcium-dependent cell- adhesion protein. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGC3.

[45046] The function of PCDHGC3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM607.2.Protocadherin gamma subfamily c, 3

(PCDHGC3, Accession NP_002579.2) is another GAM3229 target gene, herein designated TARGET GENE. PCDHGC3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PCDHGC3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGC3 BINDING SITE, designated SEQ ID:11054, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45047] Another function of GAM3229 is therefore inhibition of Protocadherin gamma subfamily c, 3 (PCDHGC3, Accession NP_002579.2), a gene which is a potential calcium-dependent cell- adhesion protein. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGC3.

[45048] The function of PCDHGC3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM607.2.Protocadherin gamma subfamily c, 4 (PCDHGC4, Accession NP_061751.1) is another GAM3229 target gene, herein designated TARGET GENE. PCDHGC4

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PCDHGC4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGC4 BINDING SITE, designated SEQ ID:11054, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45049] Another function of GAM3229 is therefore inhibition of Protocadherin gamma subfamily c, 4 (PCDHGC4, Accession NP_061751.1), a gene which is a potential calcium-dependent cell- adhesion protein. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGC4.

[45050] The function of PCDHGC4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM607.2.Protocadherin gamma subfamily c, 5 (PCDHGC5, Accession NP_061752.1) is another GAM3229 target gene, herein designated TARGET GENE. PCDHGC5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PCDHGC5, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHGC5 BINDING SITE, designated SEQ ID:11054, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45051] Another function of GAM3229 is therefore inhibition of Protocadherin gamma subfamily c, 5 (PCDHGC5, Accession NP_061752.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHGC5.

[45052] Phosducin-like (PDCL, Accession NP_005379.2) is another GAM3229 target gene, herein designated TARGET GENE. PDCL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PDCL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PDCL BINDING SITE, designated SEQ ID:18230, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45053] Another function of GAM3229 is therefore inhibition of Phosducin-like (PDCL, Accession NP_005379.2), a gene which may regulate G- protein signaling and similar to

phosducins. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDCL.

[45054] The function of PDCL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.PDZRN1 (Accession NP_699202.1) is another GAM3229 target gene, herein designated TARGET GENE. PDZRN1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PDZRN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PDZRN1 BINDING SITE, designated SEQ ID:19980, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45055] Another function of GAM3229 is therefore inhibition of PDZRN1 (Accession NP_699202.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDZRN1.

[45056] PEPP3 (Accession NP_055750.1) is another GAM3229 target gene, herein designated TARGET GENE. PEPP3 BINDING

SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PEPP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PEPP3 BINDING SITE, designated SEQ ID:17981, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45057] Another function of GAM3229 is therefore inhibition of PEPP3 (Accession NP_055750.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PEPP3.

[45058] Period homolog 1 (drosophila) (PER1, Accession NP_002607.1) is another GAM3229 target gene, herein designated TARGET GENE. PER1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PER1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PER1 BINDING SITE, designated SEQ ID:4346, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45059] Another function of GAM3229 is therefore inhibition of Period homolog 1 (drosophila) (PER1, Accession NP_002607.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PER1.

[45060] Period homolog 2 (drosophila) (PER2, Accession NP_073728.1) is another GAM3229 target gene, herein designated TARGET GENE. PER2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PER2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PER2 BINDING SITE, designated SEQ ID:10711, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45061] Another function of GAM3229 is therefore inhibition of Period homolog 2 (drosophila) (PER2, Accession NP_073728.1), a gene which Period homolog 2; putative circadian clock protein; has a PAS dimerization domain and therefore may be associated with Familial advanced sleep- phase syndrome. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Familial

advanced sleep- phase syndrome, and of other diseases and clinical conditions associated with PER2.

[45062] The function of PER2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Phosphoribosylformylglycinamidine synthase (fgar amidotransferase) (PFAS, Accession NP_036525.1) is another GAM3229 target gene, herein designated TARGET GENE. PFAS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PFAS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PFAS BINDING SITE, designated SEQ ID:19259, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45063] Another function of GAM3229 is therefore inhibition of Phosphoribosylformylglycinamidine synthase (fgar amidotransferase) (PFAS, Accession NP_036525.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PFAS.

[45064] Putative homeodomain transcription factor 2 (PHTF2, Accession NP_065165.1) is another GAM3229 target gene, herein designated TARGET GENE. PHTF2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PHTF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PHTF2 BINDING SITE, designated SEQ ID:18794, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45065] Another function of GAM3229 is therefore inhibition of Putative homeodomain transcription factor 2 (PHTF2, Accession NP_065165.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PHTF2.

[45066] PIK3AP1 (Accession NP_689522.1) is another GAM3229 target gene, herein designated TARGET GENE. PIK3AP1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PIK3AP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

PIK3AP1 BINDING SITE, designated SEQ ID:4110, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45067] Another function of GAM3229 is therefore inhibition of PIK3AP1 (Accession NP_689522.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PIK3AP1.

[45068] Pbx/knotted 1 homeobox 1 (PKNOX1, Accession NP_004562.2) is another GAM3229 target gene, herein designated TARGET GENE. PKNOX1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PKNOX1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PKNOX1 BINDING SITE, designated SEQ ID:18518, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45069] Another function of GAM3229 is therefore inhibition of Pbx/knotted 1 homeobox 1 (PKNOX1, Accession NP_004562.2), a gene which may regulate gene expression and control cell differentiation. Accordingly, utilities

of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PKNOX1.

[45070] The function of PKNOX1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.1.Phospholipase a2, group iid (PLA2G2D, Accession NP_036532.1) is another GAM3229 target gene, herein designated TARGET GENE. PLA2G2D BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLA2G2D, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PLA2G2D BINDING SITE, designated SEQ ID:12102, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45071] Another function of GAM3229 is therefore inhibition of Phospholipase a2, group iid (PLA2G2D, Accession NP_036532.1), a gene which is involved in phospholipid digestion, remodeling of cell membranes, and host defense, as well as pathophysiologic processes. Accordingly, utilities of GAM3229 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with PLA2G2D.

[45072] The function of PLA2G2D and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.PLB (Accession NP_694566.1) is another GAM3229 target gene, herein designated TARGET GENE. PLB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PLB BINDING SITE, designated SEQ ID:16989, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45073] Another function of GAM3229 is therefore inhibition of PLB (Accession NP_694566.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PLB.

[45074] Pro-melanin-concentrating hormone-like 1 (PMCHL1, Accession NP_114093.1) is another GAM3229 target gene, herein designated TARGET GENE. PMCHL1 BINDING SITE is a target binding site found in the 3` untranslated region

of mRNA encoded by PMCHL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PMCHL1 BINDING SITE, designated SEQ ID:2034, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45075] Another function of GAM3229 is therefore inhibition of Pro-melanin-concentrating hormone-like 1 (PMCHL1, Accession NP_114093.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PMCHL1.

[45076] Pro-melanin-concentrating hormone-like 2 (PMCHL2, Accession NP_114094.1) is another GAM3229 target gene, herein designated TARGET GENE. PMCHL2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PMCHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PMCHL2 BINDING SITE, designated SEQ ID:7283, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45077] Another function of GAM3229 is therefore inhibition of Pro-melanin-concentrating hormone-like 2 (PMCHL2, Accession NP_114094.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PMCHL2.

[45078] POLD3 (Accession XP_166243.1) is another GAM3229 target gene, herein designated TARGET GENE. POLD3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by POLD3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of POLD3 BINDING SITE, designated SEQ ID:11834, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45079] Another function of GAM3229 is therefore inhibition of POLD3 (Accession XP_166243.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with POLD3.

[45080] POLR1B (Accession NP_115588.1) is another GAM3229 target gene, herein designated TARGET GENE. POLR1B BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded

by POLR1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of POLR1B BINDING SITE, designated SEQ ID:14540, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45081] Another function of GAM3229 is therefore inhibition of POLR1B (Accession NP_115588.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with POLR1B.

[45082] POLR1B (Accession NP_061887.1) is another GAM3229 target gene, herein designated TARGET GENE. POLR1B BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by POLR1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of POLR1B BINDING SITE, designated SEQ ID:14540, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45083] Another function of GAM3229 is therefore inhibition of

POLR1B (Accession NP_061887.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with POLR1B.

[45084] Ptprf interacting protein, binding protein 1 (liprin beta 1) (PPFIBP1, Accession NP_003613.2) is another GAM3229 target gene, herein designated TARGET GENE. PPFIBP1 BINDING SITE1 and PPFIBP1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by PPFIBP1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPFIBP1 BINDING SITE1 and PPFIBP1 BINDING SITE2, designated SEQ ID:15585 and SEQ ID:7102 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45085] Another function of GAM3229 is therefore inhibition of Ptprf interacting protein, binding protein 1 (liprin beta 1) (PPFIBP1, Accession NP_003613.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPFIBP1.

[45086] Peptidylprolyl isomerase d (cyclophilin d) (PPID, Accession

NP_005029.1) is another GAM3229 target gene, herein designated TARGET GENE. PPID BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PPID, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPID BINDING SITE, designated SEQ ID:8015, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45087] Another function of GAM3229 is therefore inhibition of Peptidylprolyl isomerase d (cyclophilin d) (PPID, Accession NP_005029.1), a gene which catalyzes the cis- trans isomerization of proline imidic peptide bonds in oligopeptides. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPID.

[45088] The function of PPID and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Peptidylprolyl isomerase (cyclophilin)-like 2 (PPIL2, Accession NP_055152.1) is another GAM3229 target gene, herein designated TARGET GENE. PPIL2 BINDING

SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PPIL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPIL2 BINDING SITE, designated SEQ ID:6798, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45089] Another function of GAM3229 is therefore inhibition of Peptidylprolyl isomerase (cyclophilin)-like 2 (PPIL2, Accession NP_055152.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPIL2.

[45090] PRICKLE2 (Accession XP_093799.2) is another GAM3229 target gene, herein designated TARGET GENE. PRICKLE2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRICKLE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRICKLE2 BINDING SITE, designated SEQ ID:1859, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45091] Another function of GAM3229 is therefore inhibition of PRICKLE2 (Accession XP_093799.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRICKLE2.

[45092] Protamine 2 (PRM2, Accession NP_002753.1) is another GAM3229 target gene, herein designated TARGET GENE. PRM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRM2 BINDING SITE, designated SEQ ID:15684, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45093] Another function of GAM3229 is therefore inhibition of Protamine 2 (PRM2, Accession NP_002753.1), a gene which compacts sperm dna into a highly condensed, stable and inactive complex. and therefore may be associated with Infertility. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Infertility, and of other diseases and clinical conditions associated with PRM2.

[45094] The function of PRM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.2.PRO0233 (Accession NP_054840.1) is another GAM3229 target gene, herein designated TARGET GENE. PRO0233 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRO0233, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO0233 BINDING SITE, designated SEQ ID:7103, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45095] Another function of GAM3229 is therefore inhibition of PRO0233 (Accession NP_054840.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO0233.

[45096] PRO0297 (Accession NP_054800.1) is another GAM3229 target gene, herein designated TARGET GENE. PRO0297 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PRO0297, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO0297 BINDING SITE, designated SEQ ID:16889, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45097] Another function of GAM3229 is therefore inhibition of PRO0297 (Accession NP_054800.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO0297.

[45098] Presenilin 1 (alzheimer disease 3) (PSEN1, Accession NP_000012.1) is another GAM3229 target gene, herein designated TARGET GENE. PSEN1 BINDING SITE1 and PSEN1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by PSEN1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PSEN1 BINDING SITE1 and PSEN1 BINDING SITE2, designated SEQ ID:20121 and SEQ ID:4484 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ

ID:221.

[45099] Another function of GAM3229 is therefore inhibition of Presenilin 1 (alzheimer disease 3) (PSEN1, Accession NP_000012.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PSEN1.

[45100] PSK (Accession NP_057235.1) is another GAM3229 target gene, herein designated TARGET GENE. PSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PSK BINDING SITE, designated SEQ ID:14317, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45101] Another function of GAM3229 is therefore inhibition of PSK (Accession NP_057235.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PSK.

[45102] Proteasome (prosome, macropain) activator subunit 3 (pa28 gamma; ki) (PSME3, Accession NP_005780.2) is another GAM3229 target gene, herein designated TARGET

GENE. PSME3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSME3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PSME3 BINDING SITE, designated SEQ ID:5202, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45103] Another function of GAM3229 is therefore inhibition of Proteasome (prosome, macropain) activator subunit 3 (pa28 gamma; ki) (PSME3, Accession NP_005780.2), a gene which is the activator subunit of the proteasome (prosome macropain). Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PSME3.

[45104] The function of PSME3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM195.2.Proteasome (prosome, macropain) activator subunit 3 (pa28 gamma; ki) (PSME3, Accession NP_789839.1) is another GAM3229 target gene, herein designated TARGET GENE. PSME3 BINDING SITE is a target

binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSME3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PSME3 BINDING SITE, designated SEQ ID:5202, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45105] Another function of GAM3229 is therefore inhibition of Proteasome (prosome, macropain) activator subunit 3 (pa28 gamma; ki) (PSME3, Accession NP_789839.1), a gene which is the activator subunit of the proteasome (prosome macropain). Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PSME3.

[45106] The function of PSME3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM195.2.Phosphoserine phosphatase (PSPH, Accession NP_004568.1) is another GAM3229 target gene, herein designated TARGET GENE. PSPH BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PSPH, corresponding to a target bind-

ing site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PSPH BINDING SITE, designated SEQ ID:9353, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45107] Another function of GAM3229 is therefore inhibition of Phosphoserine phosphatase (PSPH, Accession NP_004568.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PSPH.

[45108] Prostaglandin e synthase (PTGES, Accession NP_004869.1) is another GAM3229 target gene, herein designated TARGET GENE. PTGES BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PTGES, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTGES BINDING SITE, designated SEQ ID:11180, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45109] Another function of GAM3229 is therefore inhibition of

Prostaglandin e synthase (PTGES, Accession NP_004869.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTGES.

[45110] Protein tyrosine phosphatase, non-receptor type 18 (brain-derived) (PTPN18, Accession NP_055184.2) is another GAM3229 target gene, herein designated TARGET GENE. PTPN18 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PTPN18, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTPN18 BINDING SITE, designated SEQ ID:10017, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45111] Another function of GAM3229 is therefore inhibition of Protein tyrosine phosphatase, non-receptor type 18 (brain-derived) (PTPN18, Accession NP_055184.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTPN18.

[45112] Protein tyrosine phosphatase, non-receptor type 21

(PTPN21, Accession NP_008970.1) is another GAM3229 target gene, herein designated TARGET GENE. PTPN21 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PTPN21, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTPN21 BINDING SITE, designated SEQ ID:18866, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45113] Another function of GAM3229 is therefore inhibition of Protein tyrosine phosphatase, non-receptor type 21 (PTPN21, Accession NP_008970.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTPN21.

[45114] Poliovirus receptor (PVR, Accession NP_006496.2) is another GAM3229 target gene, herein designated TARGET GENE. PVR BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PVR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of PVR BINDING SITE, designated SEQ ID:16119, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45115] Another function of GAM3229 is therefore inhibition of Poliovirus receptor (PVR, Accession NP_006496.2), a gene which is a poliovirus receptor and therefore may be associated with Poliomyelitis. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Poliomyelitis, and of other diseases and clinical conditions associated with PVR.

[45116] The function of PVR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.RA-GEF-2 (Accession NP_057424.1) is another GAM3229 target gene, herein designated TARGET GENE. RA-GEF-2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RA-GEF-2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RA-GEF-2 BINDING SITE, designated SEQ ID:685, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45117] Another function of GAM3229 is therefore inhibition of RA-GEF-2 (Accession NP_057424.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RA-GEF-2.

[45118] RAB11-FIP4 (Accession NP_116321.2) is another GAM3229 target gene, herein designated TARGET GENE. RAB11-FIP4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAB11-FIP4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAB11-FIP4 BINDING SITE, designated SEQ ID:4504, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45119] Another function of GAM3229 is therefore inhibition of RAB11-FIP4 (Accession NP_116321.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB11-FIP4.

[45120] Rab33b, member ras oncogene family (RAB33B, Accession NP_112586.1) is another GAM3229 target gene, herein

designated TARGET GENE. RAB33B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAB33B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAB33B BINDING SITE, designated SEQ ID:10964, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45121] Another function of GAM3229 is therefore inhibition of Rab33b, member ras oncogene family (RAB33B, Accession NP_112586.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB33B.

[45122] Retinoic acid induced 3 (RAI3, Accession NP_003970.1) is another GAM3229 target gene, herein designated TARGET GENE. RAI3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAI3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAI3 BINDING SITE, designated SEQ ID:2965, to the nucleotide sequence of GAM3229 RNA, herein des-

ignated GAM RNA, also designated SEQ ID:221.

[45123] Another function of GAM3229 is therefore inhibition of Retinoic acid induced 3 (RAI3, Accession NP_003970.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAI3.

[45124] Retinoblastoma binding protein 9 (RBBP9, Accession NP_006597.2) is another GAM3229 target gene, herein designated TARGET GENE. RBBP9 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RBBP9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RBBP9 BINDING SITE, designated SEQ ID:14743, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45125] Another function of GAM3229 is therefore inhibition of Retinoblastoma binding protein 9 (RBBP9, Accession NP_006597.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RBBP9.

[45126] RE2 (Accession NP_722561.1) is another GAM3229 target

gene, herein designated TARGET GENE. RE2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by RE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RE2 BINDING SITE, designated SEQ ID:2783, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45127] Another function of GAM3229 is therefore inhibition of RE2 (Accession NP_722561.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RE2.

[45128] Rhesus blood group, d antigen (RHD, Accession NP_057309.2) is another GAM3229 target gene, herein designated TARGET GENE. RHD BINDING SITE1 and RHD BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by RHD, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RHD BINDING SITE1 and RHD BINDING SITE2, designated SEQ ID:6398 and SEQ ID:17898 respectively, to

the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45129] Another function of GAM3229 is therefore inhibition of Rhesus blood group, d antigen (RHD, Accession NP_057309.2), a gene which Major antigen of the RH system. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RHD.

[45130] The function of RHD and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM161.1.Rhesus blood group, d antigen (RHD, Accession NP_057208.2) is another GAM3229 target gene, herein designated TARGET GENE. RHD BINDING SITE1 and RHD BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by RHD, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RHD BINDING SITE1 and RHD BINDING SITE2, designated SEQ ID:6398 and SEQ ID:17898 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45131] Another function of GAM3229 is therefore inhibition of Rhesus blood group, d antigen (RHD, Accession NP_057208.2), a gene which Major antigen of the RH system. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RHD.

[45132] The function of RHD and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM161.1.RHPN2 (Accession NP_149094.2) is another GAM3229 target gene, herein designated TARGET GENE. RHPN2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RHPN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RHPN2 BINDING SITE, designated SEQ ID:14536, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45133] Another function of GAM3229 is therefore inhibition of RHPN2 (Accession NP_149094.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RHPN2.

[45134] RI58 (Accession NP_036552.1) is another GAM3229 target gene, herein designated TARGET GENE. RI58 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RI58, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RI58 BINDING SITE, designated SEQ ID:10523, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45135] Another function of GAM3229 is therefore inhibition of RI58 (Accession NP_036552.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RI58.

[45136] RNF135 (Accession NP_115698.2) is another GAM3229 target gene, herein designated TARGET GENE. RNF135 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RNF135, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RNF135 BINDING SITE, designated SEQ ID:15831, to the nucleotide sequence of GAM3229 RNA, herein designated

GAM RNA, also designated SEQ ID:221.

[45137] Another function of GAM3229 is therefore inhibition of RNF135 (Accession NP_115698.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNF135.

[45138] RNF144 (Accession NP_055561.1) is another GAM3229 target gene, herein designated TARGET GENE. RNF144 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RNF144, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RNF144 BINDING SITE, designated SEQ ID:5448, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45139] Another function of GAM3229 is therefore inhibition of RNF144 (Accession NP_055561.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNF144.

[45140] Ring finger protein 19 (RNF19, Accession NP_056250.2) is another GAM3229 target gene, herein designated TARGET

GENE. RNF19 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by RNF19, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RNF19 BINDING SITE, designated SEQ ID:15444, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45141] Another function of GAM3229 is therefore inhibition of Ring finger protein 19 (RNF19, Accession NP_056250.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNF19.

[45142] Ring finger protein (c3hc4 type) 8 (RNF8, Accession NP_003949.1) is another GAM3229 target gene, herein designated TARGET GENE. RNF8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RNF8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RNF8 BINDING SITE, designated SEQ ID:11343, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ

ID:221.

[45143] Another function of GAM3229 is therefore inhibition of Ring finger protein (c3hc4 type) 8 (RNF8, Accession NP_003949.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNF8.

[45144] Retinitis pigmentosa 2 (x-linked recessive) (RP2, Accession NP_008846.1) is another GAM3229 target gene, herein designated TARGET GENE. RP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RP2 BINDING SITE, designated SEQ ID:15091, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45145] Another function of GAM3229 is therefore inhibition of Retinitis pigmentosa 2 (x-linked recessive) (RP2, Accession NP_008846.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RP2.

[45146] RP4-622L5 (Accession NP_061991.2) is another GAM3229

target gene, herein designated TARGET GENE. RP4-622L5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RP4-622L5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RP4-622L5 BINDING SITE, designated SEQ ID:6481, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45147] Another function of GAM3229 is therefore inhibition of RP4-622L5 (Accession NP_061991.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RP4-622L5.

[45148] Ribonucleotide reductase m2 b (tp53 inducible) (RRM2B, Accession XP_042096.1) is another GAM3229 target gene, herein designated TARGET GENE. RRM2B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RRM2B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RRM2B BINDING SITE, designated SEQ ID:9272, to the nucleotide sequence

of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45149] Another function of GAM3229 is therefore inhibition of Ribonucleotide reductase m2 b (tp53 inducible) (RRM2B, Accession XP_042096.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RRM2B.

[45150] S100 calcium binding protein a1 (S100A1, Accession NP_006262.1) is another GAM3229 target gene, herein designated TARGET GENE. S100A1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by S100A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of S100A1 BINDING SITE, designated SEQ ID:7600, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45151] Another function of GAM3229 is therefore inhibition of S100 calcium binding protein a1 (S100A1, Accession NP_006262.1), a gene which weakly binds calcium but binds zinc very tightly- distinct binding sites with different affinities exist for both ions on each monomer. Ac-

cordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with S100A1.

[45152] The function of S100A1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM724.1.Sterol-c4-methyl oxidase-like (SC4MOL, Accession NP_006736.1) is another GAM3229 target gene, herein designated TARGET GENE. SC4MOL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SC4MOL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SC4MOL BINDING SITE, designated SEQ ID:3278, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45153] Another function of GAM3229 is therefore inhibition of Sterol-c4-methyl oxidase-like (SC4MOL, Accession NP_006736.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SC4MOL.

[45154] SCAMP-4 (Accession NP_524558.1) is another GAM3229

target gene, herein designated TARGET GENE. SCAMP-4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SCAMP-4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SCAMP-4 BINDING SITE, designated SEQ ID:15109, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45155] Another function of GAM3229 is therefore inhibition of SCAMP-4 (Accession NP_524558.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCAMP-4.

[45156] Sex comb on midleg-like 2 (drosophila) (SCML2, Accession NP_006080.1) is another GAM3229 target gene, herein designated TARGET GENE. SCML2 BINDING SITE1 and SCML2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by SCML2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SCML2 BINDING SITE1 and SCML2 BINDING SITE2, desig-

nated SEQ ID:1648 and SEQ ID:12471 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45157] Another function of GAM3229 is therefore inhibition of Sex comb on midleg-like 2 (drosophila) (SCML2, Accession NP_006080.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCML2.

[45158] SCN3B (Accession NP_060870.1) is another GAM3229 target gene, herein designated TARGET GENE. SCN3B BINDING SITE1 through SCN3B BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by SCN3B, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SCN3B BINDING SITE1 through SCN3B BINDING SITE3, designated SEQ ID:12530, SEQ ID:19668 and SEQ ID:856 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45159] Another function of GAM3229 is therefore inhibition of SCN3B (Accession NP_060870.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with SCN3B.

[45160] Spondyloepiphyseal dysplasia, late (SEDL, Accession NP_055378.1) is another GAM3229 target gene, herein designated TARGET GENE. SEDL BINDING SITE1 through SEDL BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by SEDL, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SEDL BINDING SITE1 through SEDL BINDING SITE3, designated SEQ ID:15920, SEQ ID:6019 and SEQ ID:9526 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45161] Another function of GAM3229 is therefore inhibition of Spondyloepiphyseal dysplasia, late (SEDL, Accession NP_055378.1), a gene which may play role in vesicular transport from endoplasmic reticulum to golgi. and therefore may be associated with Spondyloepiphyseal dysplasia. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Spondyloepiphyseal dysplasia, and of other diseases and clinical conditions associated with SEDL.

[45162] The function of SEDL and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Selenoprotein n, 1 (SEPN1, Accession NP_065184.1) is another GAM3229 target gene, herein designated TARGET GENE. SEPN1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SEPN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SEPN1 BINDING SITE, designated SEQ ID:941, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45163] Another function of GAM3229 is therefore inhibition of Selenoprotein n, 1 (SEPN1, Accession NP_065184.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SEPN1.

[45164] Small edrk-rich factor 1a (telomeric) (SERF1A, Accession NP_068802.1) is another GAM3229 target gene, herein designated TARGET GENE. SERF1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SERF1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING

SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SERF1A BINDING SITE, designated SEQ ID:4780, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45165] Another function of GAM3229 is therefore inhibition of Small edrk-rich factor 1a (telomeric) (SERF1A, Accession NP_068802.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SERF1A.

[45166] Small edrk-rich factor 1b (centromeric) (SERF1B, Accession NP_075267.1) is another GAM3229 target gene, herein designated TARGET GENE. SERF1B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SERF1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SERF1B BINDING SITE, designated SEQ ID:4780, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45167] Another function of GAM3229 is therefore inhibition of Small edrk-rich factor 1b (centromeric) (SERF1B, Accession

NP_075267.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SERF1B.

[45168] Small edrk-rich factor 2 (SERF2, Accession NP_005761.2) is another GAM3229 target gene, herein designated TARGET GENE. SERF2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SERF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SERF2 BINDING SITE, designated SEQ ID:6225, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45169] Another function of GAM3229 is therefore inhibition of Small edrk-rich factor 2 (SERF2, Accession NP_005761.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SERF2.

[45170] Serine (or cysteine) proteinase inhibitor, clade b (ovalbumin), member 9 (SERPINB9, Accession NP_004146.1) is another GAM3229 target gene, herein designated TARGET GENE. SERPINB9 BINDING SITE1 and

SERPINB9 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by SERPINB9, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SERPINB9 BINDING SITE1 and SERPINB9 BINDING SITE2, designated SEQ ID:3013 and SEQ ID:10182 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45171] Another function of GAM3229 is therefore inhibition of Serine (or cysteine) proteinase inhibitor, clade b (ovalbumin), member 9 (SERPINB9, Accession NP_004146.1), a gene which may be a serpin serine protease inhibitor that interacts with granzyme B (GZMB). Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SERPINB9.

[45172] The function of SERPINB9 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM88.2.Short stature homeobox (SHOX, Accession NP_006874.1) is another GAM3229 target gene, herein designated TARGET GENE. SHOX BINDING SITE is a target

binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SHOX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SHOX BINDING SITE, designated SEQ ID:10964, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45173] Another function of GAM3229 is therefore inhibition of Short stature homeobox (SHOX, Accession NP_006874.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SHOX.

[45174] Sialic acid binding ig-like lectin 11 (SIGLEC11, Accession NP_443116.1) is another GAM3229 target gene, herein designated TARGET GENE. SIGLEC11 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SIGLEC11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SIGLEC11 BINDING SITE, designated SEQ ID:11214, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA,

also designated SEQ ID:221.

[45175] Another function of GAM3229 is therefore inhibition of Sialic acid binding ig-like lectin 11 (SIGLEC11, Accession NP_443116.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SIGLEC11.

[45176] Sialic acid binding ig-like lectin 5 (SIGLEC5, Accession NP_003821.1) is another GAM3229 target gene, herein designated TARGET GENE. SIGLEC5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SIGLEC5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SIGLEC5 BINDING SITE, designated SEQ ID:15567, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45177] Another function of GAM3229 is therefore inhibition of Sialic acid binding ig-like lectin 5 (SIGLEC5, Accession NP_003821.1), a gene which is a cell adhesion molecule for postnatal neural development. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SIGLEC5.

[45178] The function of SIGLEC5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM94.1.Sialic acid binding ig-like lectin 8 (SIGLEC8, Accession NP_055257.1) is another GAM3229 target gene, herein designated TARGET GENE. SIGLEC8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SIGLEC8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SIGLEC8 BINDING SITE, designated SEQ ID:6398, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45179] Another function of GAM3229 is therefore inhibition of Sialic acid binding ig-like lectin 8 (SIGLEC8, Accession NP_055257.1), a gene which is a cell adhesion molecule for postnatal neural development. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SIGLEC8.

[45180] The function of SIGLEC8 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM63.1.Src-like-adaptor 2 (SLA2, Accession NP_778252.1) is another GAM3229 target gene, herein designated TARGET GENE. SLA2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SLA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLA2 BINDING SITE, designated SEQ ID:17394, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45181] Another function of GAM3229 is therefore inhibition of Src-like-adaptor 2 (SLA2, Accession NP_778252.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLA2.

[45182] Src-like-adaptor 2 (SLA2, Accession NP_115590.1) is another GAM3229 target gene, herein designated TARGET GENE. SLA2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SLA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementar-

ity of the nucleotide sequences of SLA2 BINDING SITE, designated SEQ ID:17394, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45183] Another function of GAM3229 is therefore inhibition of Src-like-adaptor 2 (SLA2, Accession NP_115590.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLA2.

[45184] Solute carrier family 12 (potassium/chloride transporters), member 8 (SLC12A8, Accession NP_078904.1) is another GAM3229 target gene, herein designated TARGET GENE. SLC12A8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC12A8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC12A8 BINDING SITE, designated SEQ ID:18490, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45185] Another function of GAM3229 is therefore inhibition of Solute carrier family 12 (potassium/chloride transporters), member 8 (SLC12A8, Accession NP_078904.1) . Accord-

ingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC12A8.

[45186] Solute carrier family 15 (oligopeptide transporter), member 1 (SLC15A1, Accession NP_005064.1) is another GAM3229 target gene, herein designated TARGET GENE. SLC15A1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC15A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC15A1 BINDING SITE, designated SEQ ID:940, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45187] Another function of GAM3229 is therefore inhibition of Solute carrier family 15 (oligopeptide transporter), member 1 (SLC15A1, Accession NP_005064.1), a gene which is a H(+)- coupled peptide transporter. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC15A1.

[45188] The function of SLC15A1 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM30.1.Solute carrier family 16 (monocarboxylic acid transporters), member 6 (SLC16A6, Accession NP_004685.1) is another GAM3229 target gene, herein designated TARGET GENE. SLC16A6 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SLC16A6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC16A6 BINDING SITE, designated SEQ ID:3300, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45189] Another function of GAM3229 is therefore inhibition of Solute carrier family 16 (monocarboxylic acid transporters), member 6 (SLC16A6, Accession NP_004685.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC16A6.

[45190] Solute carrier family 24 (sodium/potassium/calcium exchanger), member 1 (SLC24A1, Accession NP_004718.1) is another GAM3229 target gene, herein designated TARGET GENE. SLC24A1 BINDING SITE is a target binding site

found in the 3` untranslated region of mRNA encoded by SLC24A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC24A1 BINDING SITE, designated SEQ ID:1284, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45191] Another function of GAM3229 is therefore inhibition of Solute carrier family 24 (sodium/potassium/calcium exchanger), member 1 (SLC24A1, Accession NP_004718.1), a gene which is a critical component of the visual transduction cascade, controlling the calcium concentration of outer segments during light and darkness. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC24A1.

[45192] The function of SLC24A1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Solute carrier family 2 (facilitated glucose transporter), member 10 (SLC2A10, Accession NP_110404.1) is another GAM3229 target gene, herein

designated TARGET GENE. SLC2A10 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC2A10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC2A10 BINDING SITE, designated SEQ ID:7814, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45193] Another function of GAM3229 is therefore inhibition of Solute carrier family 2 (facilitated glucose transporter), member 10 (SLC2A10, Accession NP_110404.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC2A10.

[45194] SLC35E2 (Accession XP_049733.6) is another GAM3229 target gene, herein designated TARGET GENE. SLC35E2 BINDING SITE1 and SLC35E2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by SLC35E2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC35E2 BINDING SITE1 and

SLC35E2 BINDING SITE2, designated SEQ ID:13880 and SEQ ID:16129 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45195] Another function of GAM3229 is therefore inhibition of SLC35E2 (Accession XP_049733.6) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC35E2.

[45196] Solute carrier family 36 (proton/amino acid symporter), member 1 (SLC36A1, Accession NP_510968.1) is another GAM3229 target gene, herein designated TARGET GENE. SLC36A1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC36A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC36A1 BINDING SITE, designated SEQ ID:989, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45197] Another function of GAM3229 is therefore inhibition of Solute carrier family 36 (proton/amino acid symporter), member 1 (SLC36A1, Accession NP_510968.1) . Accord-

ingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC36A1.

[45198] Solute carrier family 39 (zinc transporter), member 1 (SLC39A1, Accession NP_055252.2) is another GAM3229 target gene, herein designated TARGET GENE. SLC39A1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SLC39A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC39A1 BINDING SITE, designated SEQ ID:17454, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45199] Another function of GAM3229 is therefore inhibition of Solute carrier family 39 (zinc transporter), member 1 (SLC39A1, Accession NP_055252.2), a gene which is a divalent (zinc/iron) metal ion transporter. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC39A1.

[45200] The function of SLC39A1 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM175.1.Solute carrier family 5 (sodium-dependent vitamin transporter), member 6 (SLC5A6, Accession NP_066918.1) is another GAM3229 target gene, herein designated TARGET GENE. SLC5A6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC5A6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC5A6 BINDING SITE, designated SEQ ID:11338, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45201] Another function of GAM3229 is therefore inhibition of Solute carrier family 5 (sodium-dependent vitamin transporter), member 6 (SLC5A6, Accession NP_066918.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC5A6.

[45202] Solute carrier family 6 (neurotransmitter transporter, betaine/gaba), member 12 (SLC6A12, Accession NP_003035.2) is another GAM3229 target gene, herein designated TARGET GENE. SLC6A12 BINDING SITE is a tar-

get binding site found in the 3` untranslated region of mRNA encoded by SLC6A12, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC6A12 BINDING SITE, designated SEQ ID:9875, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45203] Another function of GAM3229 is therefore inhibition of Solute carrier family 6 (neurotransmitter transporter, betaine/gaba), member 12 (SLC6A12, Accession NP_003035.2), a gene which transports betaine and gaba. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC6A12.

[45204] The function of SLC6A12 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1095.1.Solute carrier family 7 (cationic amino acid transporter, y+ system), member 5 (SLC7A5, Accession NP_003477.3) is another GAM3229 target gene, herein designated TARGET GENE. SLC7A5 BINDING SITE is a target binding site found in the 3` untranslated region of

mRNA encoded by SLC7A5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC7A5 BINDING SITE, designated SEQ ID:15377, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45205] Another function of GAM3229 is therefore inhibition of Solute carrier family 7 (cationic amino acid transporter, y+ system), member 5 (SLC7A5, Accession NP_003477.3), a gene which mediates transport of large and small neutral amino acids. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC7A5.

[45206] The function of SLC7A5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM98.1.SLC9A8 (Accession XP_030524.2) is another GAM3229 target gene, herein designated TARGET GENE. SLC9A8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC9A8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of SLC9A8 BINDING SITE, designated SEQ ID:5218, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45207] Another function of GAM3229 is therefore inhibition of SLC9A8 (Accession XP_030524.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC9A8.

[45208] Swi/snf related, matrix associated, actin dependent regulator of chromatin, subfamily f, member 1 (SMARCF1, Accession NP_060920.4) is another GAM3229 target gene, herein designated TARGET GENE. SMARCF1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SMARCF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SMARCF1 BINDING SITE, designated SEQ ID:10764, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45209] Another function of GAM3229 is therefore inhibition of Swi/snf related, matrix associated, actin dependent regu-

lator of chromatin, subfamily f, member 1 (SMARCF1, Accession NP_060920.4) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SMARCF1.

[45210] Swi/snf related, matrix associated, actin dependent regulator of chromatin, subfamily f, member 1 (SMARCF1, Accession NP_624361.1) is another GAM3229 target gene, herein designated TARGET GENE. SMARCF1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SMARCF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SMARCF1 BINDING SITE, designated SEQ ID:10764, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45211] Another function of GAM3229 is therefore inhibition of Swi/snf related, matrix associated, actin dependent regulator of chromatin, subfamily f, member 1 (SMARCF1, Accession NP_624361.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SMARCF1.

[45212] Swi/snf related, matrix associated, actin dependent regulator of chromatin, subfamily f, member 1 (SMARCF1, Accession NP_006006.3) is another GAM3229 target gene, herein designated TARGET GENE. SMARCF1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SMARCF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SMARCF1 BINDING SITE, designated SEQ ID:10764, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45213] Another function of GAM3229 is therefore inhibition of Swi/snf related, matrix associated, actin dependent regulator of chromatin, subfamily f, member 1 (SMARCF1, Accession NP_006006.3) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SMARCF1.

[45214] Synaptosomal-associated protein, 23kda (SNAP23, Accession NP_003816.2) is another GAM3229 target gene, herein designated TARGET GENE. SNAP23 BINDING SITE is a target binding site found in the 3` untranslated region

of multiple transcripts of mRNA encoded by SNAP23, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNAP23 BINDING SITE, designated SEQ ID:15734, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45215] Another function of GAM3229 is therefore inhibition of Synaptosomal-associated protein, 23kda (SNAP23, Accession NP_003816.2), a gene which is essential component of the high affinity receptor for the general membrane fusion machinery. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNAP23.

[45216] The function of SNAP23 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Synaptosomal-associated protein, 23kda (SNAP23, Accession NP_570710.1) is another GAM3229 target gene, herein designated TARGET GENE. SNAP23 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SNAP23, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNAP23 BINDING SITE, designated SEQ ID:15734, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45217] Another function of GAM3229 is therefore inhibition of Synaptosomal-associated protein, 23kda (SNAP23, Accession NP_570710.1), a gene which is essential component of the high affinity receptor for the general membrane fusion machinery. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNAP23.

[45218] The function of SNAP23 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.SNARK (Accession NP_112214.1) is another GAM3229 target gene, herein designated TARGET GENE. SNARK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SNARK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of SNARK BINDING SITE, designated SEQ ID:9680, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45219] Another function of GAM3229 is therefore inhibition of SNARK (Accession NP_112214.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNARK.

[45220] Syntrophin, beta 2 (dystrophin-associated protein a1, 59kda, basic component 2) (SNTB2, Accession NP_006741.1) is another GAM3229 target gene, herein designated TARGET GENE. SNTB2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SNTB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNTB2 BINDING SITE, designated SEQ ID:5203, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45221] Another function of GAM3229 is therefore inhibition of Syntrophin, beta 2 (dystrophin-associated protein a1, 59kda, basic component 2) (SNTB2, Accession NP_006741.1) . Accordingly, utilities of GAM3229 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with SNTB2.

[45222] Syntrophin, beta 2 (dystrophin-associated protein a1, 59kda, basic component 2) (SNTB2, Accession NP_570896.1) is another GAM3229 target gene, herein designated TARGET GENE. SNTB2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SNTB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNTB2 BINDING SITE, designated SEQ ID:5203, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45223] Another function of GAM3229 is therefore inhibition of Syntrophin, beta 2 (dystrophin-associated protein a1, 59kda, basic component 2) (SNTB2, Accession NP_570896.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNTB2.

[45224] Sorting nexin 15 (SNX15, Accession NP_680086.1) is another GAM3229 target gene, herein designated TARGET GENE. SNX15 BINDING SITE is a target binding site found

in the 3` untranslated region of multiple transcripts of mRNA encoded by SNX15, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNX15 BINDING SITE, designated SEQ ID:17861, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45225] Another function of GAM3229 is therefore inhibition of Sorting nexin 15 (SNX15, Accession NP_680086.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNX15.

[45226] Sorting nexin 15 (SNX15, Accession NP_037438.2) is another GAM3229 target gene, herein designated TARGET GENE. SNX15 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SNX15, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNX15 BINDING SITE, designated SEQ ID:17861, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:221.

[45227] Another function of GAM3229 is therefore inhibition of Sorting nexin 15 (SNX15, Accession NP_037438.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNX15.

[45228] SNX22 (Accession NP_079074.1) is another GAM3229 target gene, herein designated TARGET GENE. SNX22 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SNX22, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNX22 BINDING SITE, designated SEQ ID:10075, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45229] Another function of GAM3229 is therefore inhibition of SNX22 (Accession NP_079074.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNX22.

[45230] SNX27 (Accession NP_112180.4) is another GAM3229 target gene, herein designated TARGET GENE. SNX27 BINDING SITE is a target binding site found in the 3` untrans-

lated region of mRNA encoded by SNX27, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNX27 BINDING SITE, designated SEQ ID:4464, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45231] Another function of GAM3229 is therefore inhibition of SNX27 (Accession NP_112180.4) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNX27.

[45232] Sp110 nuclear body protein (SP110, Accession NP_536349.1) is another GAM3229 target gene, herein designated TARGET GENE. SP110 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SP110, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SP110 BINDING SITE, designated SEQ ID:11431, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45233] Another function of GAM3229 is therefore inhibition of

Sp110 nuclear body protein (SP110, Accession NP_536349.1), a gene which is involved in transduction of interferon action. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SP110.

[45234] The function of SP110 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM223.2.Sp110 nuclear body protein (SP110, Accession NP_004500.2) is another GAM3229 target gene, herein designated TARGET GENE. SP110 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SP110, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SP110 BINDING SITE, designated SEQ ID:11431, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45235] Another function of GAM3229 is therefore inhibition of Sp110 nuclear body protein (SP110, Accession NP_004500.2), a gene which is involved in transduction of interferon action. Accordingly, utilities of GAM3229 in-

clude diagnosis, prevention and treatment of diseases and clinical conditions associated with SP110.

[45236] The function of SP110 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM223.2.SPCX (Accession NP_775260.1) is another GAM3229 target gene, herein designated TARGET GENE. SPCX BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SPCX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SPCX BINDING SITE, designated SEQ ID:6614, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45237] Another function of GAM3229 is therefore inhibition of SPCX (Accession NP_775260.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SPCX.

[45238] Synovial sarcoma translocation, chromosome 18 (SS18, Accession NP_005628.1) is another GAM3229 target gene, herein designated TARGET GENE. SS18 BINDING SITE is a target binding site found in the 3` untranslated region of

mRNA encoded by SS18, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SS18 BINDING SITE, designated SEQ ID:10286, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45239] Another function of GAM3229 is therefore inhibition of Synovial sarcoma translocation, chromosome 18 (SS18, Accession NP_005628.1), a gene which is a putative transcriptional activator. and therefore is associated with Human synovial sarcomas. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Human synovial sarcomas., and of other diseases and clinical conditions associated with SS18.

[45240] The function of SS18 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Taf11 rna polymerase ii, tata box binding protein (tbp)-associated factor, 28kda (TAF11, Accession NP_005634.1) is another GAM3229 target gene, herein designated TARGET GENE. TAF11 BINDING SITE1 and TAF11 BINDING SITE2 are target binding sites found in

untranslated regions of mRNA encoded by TAF11, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TAF11 BINDING SITE1 and TAF11 BINDING SITE2, designated SEQ ID:16874 and SEQ ID:5021 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45241] Another function of GAM3229 is therefore inhibition of Taf11 rna polymerase ii, tata box binding protein (tbp)-associated factor, 28kda (TAF11, Accession NP_005634.1), a gene which plays a central role in mediating promoter responses to various activators and repressors. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TAF11.

[45242] The function of TAF11 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.T-cell acute lymphocytic leukemia 1 (TAL1, Accession NP_003180.1) is another GAM3229 target gene, herein designated TARGET GENE. TAL1 BINDING SITE1 and TAL1 BINDING SITE2 are target binding sites found in un-

translated regions of mRNA encoded by TAL1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TAL1 BINDING SITE1 and TAL1 BINDING SITE2, designated SEQ ID:5904 and SEQ ID:3829 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45243] Another function of GAM3229 is therefore inhibition of T-cell acute lymphocytic leukemia 1 (TAL1, Accession NP_003180.1), a gene which may help control cell growth and differentiation. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TAL1.

[45244] The function of TAL1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Tap binding protein (tapasin) (TAPBP, Accession NP_003181.3) is another GAM3229 target gene, herein designated TARGET GENE. TAPBP BINDING SITE1 and TAPBP BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TAPBP, corresponding to target binding sites

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TAPBP BINDING SITE1 and TAPBP BINDING SITE2, designated SEQ ID:9729 and SEQ ID:12850 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45245] Another function of GAM3229 is therefore inhibition of Tap binding protein (tapasin) (TAPBP, Accession NP_003181.3), a gene which is involved in MHC class I-restricted antigen processing. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TAPBP.

[45246] The function of TAPBP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Tea domain family member 3 (TEAD3, Accession NP_003205.1) is another GAM3229 target gene, herein designated TARGET GENE. TEAD3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TEAD3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of TEAD3 BINDING SITE, designated SEQ ID:11870, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45247] Another function of GAM3229 is therefore inhibition of Tea domain family member 3 (TEAD3, Accession NP_003205.1), a gene which binds to multiple functional elements of the human chorionic somatomammotropin- b gene enhancer. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TEAD3.

[45248] The function of TEAD3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM497.1.Testis derived transcript (3 lim domains) (TES, Accession NP_690042.1) is another GAM3229 target gene, herein designated TARGET GENE. TES BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TES, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TES BINDING SITE, designated SEQ ID:16668, to the nu-

cleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45249] Another function of GAM3229 is therefore inhibition of Testis derived transcript (3 lim domains) (TES, Accession NP_690042.1), a gene which acts as a tumor suppressor and therefore may be associated with Ovarian carcinomas, breast cancer. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Ovarian carcinomas, breast cancer, and of other diseases and clinical conditions associated with TES.

[45250] The function of TES and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.Testis derived transcript (3 lim domains) (TES, Accession NP_056456.1) is another GAM3229 target gene, herein designated TARGET GENE. TES BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TES, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TES BINDING SITE, designated SEQ ID:16668, to the nucleotide sequence of GAM3229 RNA, herein designated

GAM RNA, also designated SEQ ID:221.

[45251] Another function of GAM3229 is therefore inhibition of Testis derived transcript (3 lim domains) (TES, Accession NP_056456.1), a gene which acts as a tumor suppressor and therefore may be associated with Ovarian carcinomas, breast cancer. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Ovarian carcinomas, breast cancer, and of other diseases and clinical conditions associated with TES.

[45252] The function of TES and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.Transforming growth factor, beta-induced, 68kda (TGFBI, Accession NP_000349.1) is another GAM3229 target gene, herein designated TARGET GENE. TGFBI BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFBI, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TGFBI BINDING SITE, designated SEQ ID:15372, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45253] Another function of GAM3229 is therefore inhibition of Transforming growth factor, beta-induced, 68kda (TGFBI, Accession NP_000349.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TGFBI.

[45254] Tgfb-induced factor 2 (tale family homeobox) (TGIF2, Accession NP_068581.1) is another GAM3229 target gene, herein designated TARGET GENE. TGIF2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGIF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TGIF2 BINDING SITE, designated SEQ ID:18631, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45255] Another function of GAM3229 is therefore inhibition of Tgfb-induced factor 2 (tale family homeobox) (TGIF2, Accession NP_068581.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TGIF2.

[45256] TIM50L (Accession XP_053074.2) is another GAM3229 target gene, herein designated TARGET GENE. TIM50L

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TIM50L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TIM50L BINDING SITE, designated SEQ ID:5198, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45257] Another function of GAM3229 is therefore inhibition of TIM50L (Accession XP_053074.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TIM50L.

[45258] Tissue inhibitor of metalloproteinase 3 (sorsby fundus dystrophy, pseudoinflammatory) (TIMP3, Accession NP_000353.1) is another GAM3229 target gene, herein designated TARGET GENE. TIMP3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TIMP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TIMP3 BINDING SITE, designated SEQ ID:10513, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ

ID:221.

[45259] Another function of GAM3229 is therefore inhibition of Tissue inhibitor of metalloproteinase 3 (sorsby fundus dystrophy, pseudoinflammatory) (TIMP3, Accession NP_000353.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TIMP3.

[45260] Tumor necrosis factor receptor superfamily, member 10b (TNFRSF10B, Accession NP_003833.3) is another GAM3229 target gene, herein designated TARGET GENE. TNFRSF10B BINDING SITE1 and TNFRSF10B BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TNFRSF10B, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNFRSF10B BINDING SITE1 and TNFRSF10B BINDING SITE2, designated SEQ ID:2703 and SEQ ID:2055 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45261] Another function of GAM3229 is therefore inhibition of Tumor necrosis factor receptor superfamily, member 10b (TNFRSF10B, Accession NP_003833.3), a gene which forms

complex that induces apoptosis. and therefore may be associated with Squamous cell carcinoma . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Squamous cell carcinoma ., and of other diseases and clinical conditions associated with TNFRSF10B.

[45262] The function of TNFRSF10B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Tumor necrosis factor receptor superfamily, member 10b (TNFRSF10B, Accession NP_671716.1) is another GAM3229 target gene, herein designated TARGET GENE. TNFRSF10B BINDING SITE1 and TNFRSF10B BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TNFRSF10B, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNFRSF10B BINDING SITE1 and TNFRSF10B BINDING SITE2, designated SEQ ID:2055 and SEQ ID:2703 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45263] Another function of GAM3229 is therefore inhibition of

Tumor necrosis factor receptor superfamily, member 10b (TNFRSF10B, Accession NP_671716.1), a gene which forms complex that induces apoptosis. and therefore may be associated with Squamous cell carcinoma . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Squamous cell carcinoma ., and of other diseases and clinical conditions associated with TNFRSF10B.

[45264] The function of TNFRSF10B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Tumor necrosis factor receptor superfamily, member 11a, activator of nfkb (TNFRSF11A, Accession NP_003830.1) is another GAM3229 target gene, herein designated TARGET GENE. TNFRSF11A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNFRSF11A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNFRSF11A BINDING SITE, designated SEQ ID:18341, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45265] Another function of GAM3229 is therefore inhibition of

Tumor necrosis factor receptor superfamily, member 11a, activator of nfkb (TNFRSF11A, Accession NP_003830.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TNFRSF11A.

[45266] TP53I5 (Accession XP_290532.2) is another GAM3229 target gene, herein designated TARGET GENE. TP53I5 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TP53I5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TP53I5 BINDING SITE, designated SEQ ID:11115, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45267] Another function of GAM3229 is therefore inhibition of TP53I5 (Accession XP_290532.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TP53I5.

[45268] Thiopurine s-methyltransferase (TPMT, Accession NP_000358.1) is another GAM3229 target gene, herein designated TARGET GENE. TPMT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA

encoded by TPMT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TPMT BINDING SITE, designated SEQ ID:8393, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45269] Another function of GAM3229 is therefore inhibition of Thiopurine s-methyltransferase (TPMT, Accession NP_000358.1), a gene which catalyzes the s- methylation of thiopurine drugs such as 6- mercaptopurine. and therefore may be associated with Thiopurine s- methyl-transferase polymorphism. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Thiopurine s- methyltransferase polymorphism, and of other diseases and clinical conditions associated with TPMT.

[45270] The function of TPMT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Tryptase gamma 1 (TPSG1, Accession NP_036599.1) is another GAM3229 target gene, herein designated TARGET GENE. TPSG1 BINDING SITE is a target

binding site found in the 5` untranslated region of mRNA encoded by TPSG1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TPSG1 BINDING SITE, designated SEQ ID:10281, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45271] Another function of GAM3229 is therefore inhibition of Tryptase gamma 1 (TPSG1, Accession NP_036599.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TPSG1.

[45272] TRAM2 (Accession NP_036420.1) is another GAM3229 target gene, herein designated TARGET GENE. TRAM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRAM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRAM2 BINDING SITE, designated SEQ ID:14318, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45273] Another function of GAM3229 is therefore inhibition of TRAM2 (Accession NP_036420.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRAM2.

[45274] Tripartite motif-containing 16 (TRIM16, Accession NP_006461.2) is another GAM3229 target gene, herein designated TARGET GENE. TRIM16 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRIM16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRIM16 BINDING SITE, designated SEQ ID:14800, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45275] Another function of GAM3229 is therefore inhibition of Tripartite motif-containing 16 (TRIM16, Accession NP_006461.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRIM16.

[45276] Tripartite motif-containing 5 (TRIM5, Accession NP_149023.1) is another GAM3229 target gene, herein designated TARGET GENE. TRIM5 BINDING SITE is a target

binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TRIM5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRIM5 BINDING SITE, designated SEQ ID:11399, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45277] Another function of GAM3229 is therefore inhibition of Tripartite motif-containing 5 (TRIM5, Accession NP_149023.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRIM5.

[45278] Transient receptor potential cation channel, subfamily v, member 1 (TRPV1, Accession NP_542435.1) is another GAM3229 target gene, herein designated TARGET GENE. TRPV1 BINDING SITE1 and TRPV1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TRPV1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRPV1 BINDING SITE1 and TRPV1 BINDING SITE2, designated SEQ

ID:14539 and SEQ ID:3431 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45279] Another function of GAM3229 is therefore inhibition of Transient receptor potential cation channel, subfamily v, member 1 (TRPV1, Accession NP_542435.1), a gene which functions as a receptor for capsaicin. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRPV1.

[45280] The function of TRPV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Transient receptor potential cation channel, subfamily v, member 1 (TRPV1, Accession NP_061197.3) is another GAM3229 target gene, herein designated TARGET GENE. TRPV1 BINDING SITE1 and TRPV1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TRPV1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRPV1 BINDING SITE1 and TRPV1 BINDING SITE2, designated SEQ ID:14539 and SEQ ID:3431 respec-

tively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45281] Another function of GAM3229 is therefore inhibition of Transient receptor potential cation channel, subfamily v, member 1 (TRPV1, Accession NP_061197.3), a gene which functions as a receptor for capsaicin. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRPV1.

[45282] The function of TRPV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Transient receptor potential cation channel, subfamily v, member 1 (TRPV1, Accession NP_542436.1) is another GAM3229 target gene, herein designated TARGET GENE. TRPV1 BINDING SITE1 and TRPV1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TRPV1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRPV1 BINDING SITE1 and TRPV1 BINDING SITE2, designated SEQ ID:14539 and SEQ ID:14539 respectively, to the nucleotide sequence of GAM3229 RNA,

herein designated GAM RNA, also designated SEQ ID:221.

[45283] Another function of GAM3229 is therefore inhibition of Transient receptor potential cation channel, subfamily v, member 1 (TRPV1, Accession NP_542436.1), a gene which functions as a receptor for capsaicin. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRPV1.

[45284] The function of TRPV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Transient receptor potential cation channel, subfamily v, member 1 (TRPV1, Accession NP_542436.1) is another GAM3229 target gene, herein designated TARGET GENE. TRPV1 BINDING SITE1 and TRPV1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TRPV1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRPV1 BINDING SITE1 and TRPV1 BINDING SITE2, designated SEQ ID:3431 and SEQ ID:3431 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45285] Another function of GAM3229 is therefore inhibition of Transient receptor potential cation channel, subfamily v, member 1 (TRPV1, Accession NP_542436.1), a gene which functions as a receptor for capsaicin. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRPV1.

[45286] The function of TRPV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.TU12B1-TY (Accession NP_057659.1) is another GAM3229 target gene, herein designated TARGET GENE. TU12B1-TY BINDING SITE1 through TU12B1-TY BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by TU12B1-TY, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TU12B1-TY BINDING SITE1 through TU12B1-TY BINDING SITE3, designated SEQ ID:1925, SEQ ID:3770 and SEQ ID:11645 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45287] Another function of GAM3229 is therefore inhibition of

TU12B1-TY (Accession NP_057659.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TU12B1-TY.

[45288] TUCAN (Accession NP_055774.1) is another GAM3229 target gene, herein designated TARGET GENE. TUCAN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TUCAN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TUCAN BINDING SITE, designated SEQ ID:16766, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45289] Another function of GAM3229 is therefore inhibition of TUCAN (Accession NP_055774.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TUCAN.

[45290] Tuftelin 1 (TUFT1, Accession NP_064512.1) is another GAM3229 target gene, herein designated TARGET GENE. TUFT1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TUFT1, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TUFT1 BINDING SITE, designated SEQ ID:5345, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45291] Another function of GAM3229 is therefore inhibition of Tuftelin 1 (TUFT1, Accession NP_064512.1), a gene which appears to play a role in cytokinesis, cell shape, and specialized functions such as secretion and capping. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TUFT1.

[45292] The function of TUFT1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.TUWD12 (Accession NP_758440.1) is another GAM3229 target gene, herein designated TARGET GENE. TUWD12 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TUWD12, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TUWD12 BINDING SITE, designated

SEQ ID:9384, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45293] Another function of GAM3229 is therefore inhibition of TUWD12 (Accession NP_758440.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TUWD12.

[45294] TXL-2 (Accession NP_835231.1) is another GAM3229 target gene, herein designated TARGET GENE. TXL-2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TXL-2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TXL-2 BINDING SITE, designated SEQ ID:15613, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45295] Another function of GAM3229 is therefore inhibition of TXL-2 (Accession NP_835231.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TXL-2.

[45296] UBF-fl (Accession NP_116217.1) is another GAM3229 tar-

get gene, herein designated TARGET GENE. UBF-fl BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UBF-fl, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UBF-fl BINDING SITE, designated SEQ ID:12691, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45297] Another function of GAM3229 is therefore inhibition of UBF-fl (Accession NP_116217.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UBF-fl.

[45298] Uridine monophosphate synthetase (orotate phosphoribosyl transferase and orotidine-5'-decarboxylase) (UMPS, Accession NP_000364.1) is another GAM3229 target gene, herein designated TARGET GENE. UMPS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UMPS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UMPS BINDING SITE, designated SEQ ID:14691, to the nucleotide sequence of

GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45299] Another function of GAM3229 is therefore inhibition of Uridine monophosphate synthetase (orotate phosphoribosyl transferase and orotidine-5'-decarboxylase) (UMPS, Accession NP_000364.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UMPS.

[45300] Ubiquitin specific protease 22 (USP22, Accession XP_042698.2) is another GAM3229 target gene, herein designated TARGET GENE. USP22 BINDING SITE1 and USP22 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by USP22, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of USP22 BINDING SITE1 and USP22 BINDING SITE2, designated SEQ ID:14801 and SEQ ID:1601 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45301] Another function of GAM3229 is therefore inhibition of Ubiquitin specific protease 22 (USP22, Accession XP_042698.2) . Accordingly, utilities of GAM3229 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with USP22.

[45302] VDU1 (Accession NP_055832.2) is another GAM3229 target gene, herein designated TARGET GENE. VDU1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by VDU1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VDU1 BINDING SITE, designated SEQ ID:10537, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45303] Another function of GAM3229 is therefore inhibition of VDU1 (Accession NP_055832.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VDU1.

[45304] Vent-like homeobox 2 (VENTX2, Accession NP_055283.1) is another GAM3229 target gene, herein designated TARGET GENE. VENTX2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by VENTX2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of VENTX2 BINDING SITE, designated SEQ ID:19528, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45305] Another function of GAM3229 is therefore inhibition of Vent-like homeobox 2 (VENTX2, Accession NP_055283.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VENTX2.

[45306] Von hippel-lindau syndrome (VHL, Accession NP_000542.1) is another GAM3229 target gene, herein designated TARGET GENE. VHL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by VHL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VHL BINDING SITE, designated SEQ ID:8629, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45307] Another function of GAM3229 is therefore inhibition of Von hippel-lindau syndrome (VHL, Accession NP_000542.1), a gene which may control rna stability

through the selective degradation of rna- bound proteins. and therefore is associated with Von hippel- lindau disease. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Von hippel- lindau disease, and of other diseases and clinical conditions associated with VHL.

[45308] The function of VHL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.VIK (Accession NP_612503.1) is another GAM3229 target gene, herein designated TARGET GENE. VIK BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by VIK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VIK BINDING SITE, designated SEQ ID:3535, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45309] Another function of GAM3229 is therefore inhibition of VIK (Accession NP_612503.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VIK.

[45310] Vesicular membrane protein p24 (VMP, Accession NP_542454.2) is another GAM3229 target gene, herein designated TARGET GENE. VMP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by VMP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VMP BINDING SITE, designated SEQ ID:5123, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45311] Another function of GAM3229 is therefore inhibition of Vesicular membrane protein p24 (VMP, Accession NP_542454.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VMP.

[45312] Vanin 1 (VNN1, Accession NP_004657.1) is another GAM3229 target gene, herein designated TARGET GENE. VNN1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by VNN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

VNN1 BINDING SITE, designated SEQ ID:16216, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45313] Another function of GAM3229 is therefore inhibition of Vanin 1 (VNN1, Accession NP_004657.1), a gene which may regulate steps in thymus homing and play a role in mammalian sexual development. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VNN1.

[45314] The function of VNN1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM65.1.Vacuolar protein sorting 33a (yeast) (VPS33A, Accession NP_075067.2) is another GAM3229 target gene, herein designated TARGET GENE. VPS33A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by VPS33A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VPS33A BINDING SITE, designated SEQ ID:12847, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45315] Another function of GAM3229 is therefore inhibition of Vacuolar protein sorting 33a (yeast) (VPS33A, Accession NP_075067.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VPS33A.

[45316] WBP3 (Accession NP_783863.2) is another GAM3229 target gene, herein designated TARGET GENE. WBP3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by WBP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WBP3 BINDING SITE, designated SEQ ID:13231, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45317] Another function of GAM3229 is therefore inhibition of WBP3 (Accession NP_783863.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WBP3.

[45318] Williams-beuren syndrome chromosome region 23 (WBSCR23, Accession NP_079318.1) is another GAM3229 target gene, herein designated TARGET GENE. WBSCR23 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by WBSCR23, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WBSCR23 BINDING SITE, designated SEQ ID:4757, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45319] Another function of GAM3229 is therefore inhibition of Williams-beuren syndrome chromosome region 23 (WBSCR23, Accession NP_079318.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WBSCR23.

[45320] WDFY3 (Accession NP_848700.1) is another GAM3229 target gene, herein designated TARGET GENE. WDFY3 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by WDFY3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WDFY3 BINDING SITE, designated SEQ ID:18416, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ

ID:221.

[45321] Another function of GAM3229 is therefore inhibition of WDFY3 (Accession NP_848700.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WDFY3.

[45322] WFDC8 (Accession NP_852611.1) is another GAM3229 target gene, herein designated TARGET GENE. WFDC8 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by WFDC8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WFDC8 BINDING SITE, designated SEQ ID:15411, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45323] Another function of GAM3229 is therefore inhibition of WFDC8 (Accession NP_852611.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WFDC8.

[45324] Wolf-hirschhorn syndrome candidate 1 (WHSC1, Accession NP_055734.1) is another GAM3229 target gene, herein designated TARGET GENE. WHSC1 BINDING SITE1

and WHSC1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by WHSC1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WHSC1 BINDING SITE1 and WHSC1 BINDING SITE2, designated SEQ ID:18856 and SEQ ID:18856 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45325] Another function of GAM3229 is therefore inhibition of Wolf-hirschhorn syndrome candidate 1 (WHSC1, Accession NP_055734.1), a gene which binds covalently to and repairs g/t mismatches. and therefore may be associated with Wolf- hirschhorn syndrome. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Wolf- hirschhorn syndrome, and of other diseases and clinical conditions associated with WHSC1.

[45326] The function of WHSC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Wolf-hirschhorn syndrome candidate 1 (WHSC1, Accession NP_579878.1) is another GAM3229

target gene, herein designated TARGET GENE. WHSC1 BINDING SITE1 and WHSC1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by WHSC1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WHSC1 BINDING SITE1 and WHSC1 BINDING SITE2, designated SEQ ID:18856 and SEQ ID:5144 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45327] Another function of GAM3229 is therefore inhibition of Wolf-hirschhorn syndrome candidate 1 (WHSC1, Accession NP_579878.1), a gene which binds covalently to and repairs g/t mismatches. and therefore may be associated with Wolf- hirschhorn syndrome. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Wolf- hirschhorn syndrome, and of other diseases and clinical conditions associated with WHSC1.

[45328] The function of WHSC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Wolf-hirschhorn syndrome candidate 1

(WHSC1, Accession NP_579877.1) is another GAM3229 target gene, herein designated TARGET GENE. WHSC1 BINDING SITE1 and WHSC1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by WHSC1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WHSC1 BINDING SITE1 and WHSC1 BINDING SITE2, designated SEQ ID:18856 and SEQ ID:18856 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45329] Another function of GAM3229 is therefore inhibition of Wolf-hirschhorn syndrome candidate 1 (WHSC1, Accession NP_579877.1), a gene which binds covalently to and repairs g/t mismatches. and therefore may be associated with Wolf- hirschhorn syndrome. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Wolf- hirschhorn syndrome, and of other diseases and clinical conditions associated with WHSC1.

[45330] The function of WHSC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM30.1.Wolf-hirschhorn syndrome candidate 1 (WHSC1, Accession NP_015627.1) is another GAM3229 target gene, herein designated TARGET GENE. WHSC1 BINDING SITE1 and WHSC1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by WHSC1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WHSC1 BINDING SITE1 and WHSC1 BINDING SITE2, designated SEQ ID:18856 and SEQ ID:18608 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45331] Another function of GAM3229 is therefore inhibition of Wolf-hirschhorn syndrome candidate 1 (WHSC1, Accession NP_015627.1), a gene which binds covalently to and repairs g/t mismatches. and therefore may be associated with Wolf- hirschhorn syndrome. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of Wolf- hirschhorn syndrome, and of other diseases and clinical conditions associated with WHSC1.

[45332] The function of WHSC1 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM30.1.X-ray repair complementing defective repair in chinese hamster cells 2 (XRCC2, Accession NP_005422.1) is another GAM3229 target gene, herein designated TARGET GENE. XRCC2 BINDING SITE1 and XRCC2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by XRCC2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of XRCC2 BINDING SITE1 and XRCC2 BINDING SITE2, designated SEQ ID:14540 and SEQ ID:10425 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45333] Another function of GAM3229 is therefore inhibition of X-ray repair complementing defective repair in chinese hamster cells 2 (XRCC2, Accession NP_005422.1), a gene which involves in the homologous recombination repair (hrr) pathway of double- stranded dna. Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with XRCC2.

[45334] The function of XRCC2 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.ZAP (Accession NP_064504.2) is another GAM3229 target gene, herein designated TARGET GENE. ZAP BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ZAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZAP BINDING SITE, designated SEQ ID:10075, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45335] Another function of GAM3229 is therefore inhibition of ZAP (Accession NP_064504.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZAP.

[45336] ZFP42 (Accession NP_777560.1) is another GAM3229 target gene, herein designated TARGET GENE. ZFP42 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZFP42, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZFP42

BINDING SITE, designated SEQ ID:20009, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45337] Another function of GAM3229 is therefore inhibition of ZFP42 (Accession NP_777560.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZFP42.

[45338] Zinc finger protein 64 homolog (mouse) (ZFP64, Accession NP_060667.1) is another GAM3229 target gene, herein designated TARGET GENE. ZFP64 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ZFP64, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZFP64 BINDING SITE, designated SEQ ID:3840, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45339] Another function of GAM3229 is therefore inhibition of Zinc finger protein 64 homolog (mouse) (ZFP64, Accession NP_060667.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZFP64.

[45340] Zinc finger protein 64 homolog (mouse) (ZFP64, Accession NP_071371.2) is another GAM3229 target gene, herein designated TARGET GENE. ZFP64 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ZFP64, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZFP64 BINDING SITE, designated SEQ ID:3840, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45341] Another function of GAM3229 is therefore inhibition of Zinc finger protein 64 homolog (mouse) (ZFP64, Accession NP_071371.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZFP64.

[45342] Zinc finger protein 95 homolog (mouse) (ZFP95, Accession NP_659570.1) is another GAM3229 target gene, herein designated TARGET GENE. ZFP95 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ZFP95, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the

complementarity of the nucleotide sequences of ZFP95 BINDING SITE, designated SEQ ID:8365, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45343] Another function of GAM3229 is therefore inhibition of Zinc finger protein 95 homolog (mouse) (ZFP95, Accession NP_659570.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZFP95.

[45344] Zinc finger protein 95 homolog (mouse) (ZFP95, Accession NP_055384.1) is another GAM3229 target gene, herein designated TARGET GENE. ZFP95 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ZFP95, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZFP95 BINDING SITE, designated SEQ ID:8365, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45345] Another function of GAM3229 is therefore inhibition of Zinc finger protein 95 homolog (mouse) (ZFP95, Accession NP_055384.1) . Accordingly, utilities of GAM3229 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with ZFP95.

[45346] Zinc finger protein 138 (clone phz-32) (ZNF138, Accession XP_088081.1) is another GAM3229 target gene, herein designated TARGET GENE. ZNF138 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF138, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF138 BINDING SITE, designated SEQ ID:6482, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45347] Another function of GAM3229 is therefore inhibition of Zinc finger protein 138 (clone phz-32) (ZNF138, Accession XP_088081.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF138.

[45348] Zinc finger protein 214 (ZNF214, Accession NP_037381.1) is another GAM3229 target gene, herein designated TARGET GENE. ZNF214 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ZNF214, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF214 BINDING SITE, designated SEQ ID:8097, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45349] Another function of GAM3229 is therefore inhibition of Zinc finger protein 214 (ZNF214, Accession NP_037381.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF214.

[45350] Zinc finger protein 264 (ZNF264, Accession NP_003408.1) is another GAM3229 target gene, herein designated TARGET GENE. ZNF264 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF264, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF264 BINDING SITE, designated SEQ ID:1422, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45351] Another function of GAM3229 is therefore inhibition of

Zinc finger protein 264 (ZNF264, Accession NP_003408.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF264.

[45352] Zinc finger protein 273 (ZNF273, Accession XP_088082.1) is another GAM3229 target gene, herein designated TARGET GENE. ZNF273 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF273, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF273 BINDING SITE, designated SEQ ID:16389, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45353] Another function of GAM3229 is therefore inhibition of Zinc finger protein 273 (ZNF273, Accession XP_088082.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF273.

[45354] Zinc finger protein 398 (ZNF398, Accession NP_065832.1) is another GAM3229 target gene, herein designated TARGET GENE. ZNF398 BINDING SITE is a target binding site

found in the 5` untranslated region of multiple transcripts of mRNA encoded by ZNF398, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF398 BINDING SITE, designated SEQ ID:16846, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45355] Another function of GAM3229 is therefore inhibition of Zinc finger protein 398 (ZNF398, Accession NP_065832.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF398.

[45356] ZNF430 (Accession NP_079465.1) is another GAM3229 target gene, herein designated TARGET GENE. ZNF430 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF430, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF430 BINDING SITE, designated SEQ ID:5502, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45357] Another function of GAM3229 is therefore inhibition of ZNF430 (Accession NP_079465.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF430.

[45358] ZNF431 (Accession XP_086098.2) is another GAM3229 target gene, herein designated TARGET GENE. ZNF431 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF431, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF431 BINDING SITE, designated SEQ ID:16935, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45359] Another function of GAM3229 is therefore inhibition of ZNF431 (Accession XP_086098.2) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF431.

[45360] ZNF440 (Accession NP_689570.1) is another GAM3229 target gene, herein designated TARGET GENE. ZNF440 BINDING SITE1 and ZNF440 BINDING SITE2 are target binding sites found in untranslated regions of mRNA en-

coded by ZNF440, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF440 BINDING SITE1 and ZNF440 BINDING SITE2, designated SEQ ID:13052 and SEQ ID:8337 respectively, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45361] Another function of GAM3229 is therefore inhibition of ZNF440 (Accession NP_689570.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF440.

[45362] ZNF450 (Accession NP_055612.1) is another GAM3229 target gene, herein designated TARGET GENE. ZNF450 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF450, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF450 BINDING SITE, designated SEQ ID:14177, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45363] Another function of GAM3229 is therefore inhibition of ZNF450 (Accession NP_055612.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF450.

[45364] Zinc finger protein 74 (cos52) (ZNF74, Accession NP_003417.1) is another GAM3229 target gene, herein designated TARGET GENE. ZNF74 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ZNF74, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF74 BINDING SITE, designated SEQ ID:15580, to the nucleotide sequence of GAM3229 RNA, herein designated GAM RNA, also designated SEQ ID:221.

[45365] Another function of GAM3229 is therefore inhibition of Zinc finger protein 74 (cos52) (ZNF74, Accession NP_003417.1) . Accordingly, utilities of GAM3229 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF74.

[45366]

[45367] Fig. 8 further provides a conceptual description of a novel

bioinformatically detected of the present invention, referred to here as Genomic Address Messenger 3298 (GAM3298), which modulates expression of respective target genes thereof, the function and utility of which target genes is known in the art.

[45368] GAM3298 is a novel bioinformatically detected regulatory, non protein coding, micro RNA (miRNA) gene. The method by which GAM3298 was detected is described hereinabove with reference to Figs. 8-15.

[45369] GAM3298 gene, herein designated GAM GENE, and GAM3298 target gene, herein designated TARGET GENE, are human genes contained in the human genome.

[45370] GAM3298 gene encodes a GAM3298 precursor RNA, herein designated GAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, GAM3298 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of GAM3298 precursor RNA is designated SEQ ID:111, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:111 is located at position 131248914 relative to chromosome X.

[45371] GAM3298 precursor RNA folds onto itself, forming GAM3298 folded precursor RNA, herein designated GAM

FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[45372] GAM3298 precursor RNA folds onto itself, forming GAM3298 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[45373] Nucleotide sequence of GAM3298 precursor RNA, designated SEQ-ID: 111, and a schematic representation of a predicted secondary folding of GAM3298 folded precursor RNA are further described with reference to Table 2, hereby incorporated by reference.

[45374] An enzyme complex designated DICER COMPLEX, `dices` the GAM3298 folded precursor RNA into GAM3298 RNA,

herein designated GAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy Group: A) nucleotide sequence of GAM3298 RNA is designated SEQ ID:259, and is provided hereinbelow with references to the sequence listing part and Table 3, hereby incorporated by reference.

[45375] GAM3298 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM3298 target RNA, herein designated GAM TARGET RNA. GAM3298 target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[45376] GAM3298 RNA, herein designated GAM RNA, binds complementarily to one or more target binding sites located in untranslated regions of GAM3298 target RNA, herein designated GAM TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of GAM3298 RNA is an accurate or a partial inversed-reversed se-

quence of the nucleotide sequence of each of the target binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limiting GAM3298 RNA may have a different number of target binding sites in untranslated regions of a GAM3298 target RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3`UTR region, this is meant as an example only these target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[45377] The complementary binding of GAM3298 RNA, herein designated GAM RNA, to target binding sites on GAM3298 target RNA, herein designated GAM TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM3298 target RNA into GAM3298 target protein, herein designated GAM TARGET PROTEIN. GAM target protein is therefore outlined by a broken line.

[45378] It is appreciated that GAM3298 target gene, herein designated TARGET GENE, in fact represents a plurality of GAM3298 target genes. The mRNA of each one of this

plurality of GAM3298 target genes comprises one or more target binding sites, each having a nucleotide sequence which is at least partly complementary to GAM3298 RNA, herein designated GAM RNA, and which when bound by GAM3298 RNA causes inhibition of translation of respective one or more GAM3298 target proteins.

[45379] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 8 with specific reference to translational inhibition exerted by GAM3298 gene, herein designated GAM GENE, on one or more GAM3298 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., Perspective: Glimpses of a tiny RNA world, Science 294,779 (2001)).

[45380] It is appreciated that specific functions and accordingly

utilities of GAM3298 correlate with, and may be deduced from, the identity of the target genes which GAM3298 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[45381]

[45382]

[45383] 15E1.2 (Accession XP_290596.1) is a GAM3298 target gene, herein designated TARGET GENE. 15E1.2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by 15E1.2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of 15E1.2 BINDING SITE, designated SEQ ID:7468, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45384] A function of GAM3298 is therefore inhibition of 15E1.2 (Accession XP_290596.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with 15E1.2.

[45385] Atp-binding cassette, sub-family c (cftr/mrp), member 13 (ABCC13, Accession NP_742021.1) is another GAM3298

target gene, herein designated TARGET GENE. ABCC13 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ABCC13, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABCC13 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45386] Another function of GAM3298 is therefore inhibition of Atp-binding cassette, sub-family c (cftr/mrp), member 13 (ABCC13, Accession NP_742021.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABCC13.

[45387] ACATE2 (Accession NP_036464.1) is another GAM3298 target gene, herein designated TARGET GENE. ACATE2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ACATE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

ACATE2 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45388] Another function of GAM3298 is therefore inhibition of ACATE2 (Accession NP_036464.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ACATE2.

[45389] Adenylate cyclase 1 (brain) (ADCY1, Accession NP_066939.1) is another GAM3298 target gene, herein designated TARGET GENE. ADCY1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADCY1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADCY1 BINDING SITE, designated SEQ ID:14995, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45390] Another function of GAM3298 is therefore inhibition of Adenylate cyclase 1 (brain) (ADCY1, Accession NP_066939.1), a gene which a calmodulin- sensitive adenylyl cyclase. it may play a role in memory acquisition

and learning. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADCY1.

[45391] The function of ADCY1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.1.Adenylate cyclase 7 (ADCY7, Accession NP_001105.1) is another GAM3298 target gene, herein designated TARGET GENE. ADCY7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADCY7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADCY7 BINDING SITE, designated SEQ ID:17337, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45392] Another function of GAM3298 is therefore inhibition of Adenylate cyclase 7 (ADCY7, Accession NP_001105.1), a gene which this a membrane- bound, ca(2+)- inhibitable adenylyl cyclase. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADCY7.

[45393] The function of ADCY7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM75.1.Agmatine ureohydrolase (agmatinase) (AGMAT, Accession NP_079034.2) is another GAM3298 target gene, herein designated TARGET GENE. AGMAT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by AGMAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AGMAT BINDING SITE, designated SEQ ID:16781, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45394] Another function of GAM3298 is therefore inhibition of Agmatine ureohydrolase (agmatinase) (AGMAT, Accession NP_079034.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AGMAT.

[45395] Adenylate kinase 1 (AK1, Accession NP_000467.1) is another GAM3298 target gene, herein designated TARGET GENE. AK1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by AK1, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AK1 BINDING SITE, designated SEQ ID:816, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45396] Another function of GAM3298 is therefore inhibition of Adenylate kinase 1 (AK1, Accession NP_000467.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AK1.

[45397] Aldehyde dehydrogenase 3 family, member a2 (ALDH3A2, Accession NP_000373.1) is another GAM3298 target gene, herein designated TARGET GENE. ALDH3A2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ALDH3A2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ALDH3A2 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45398] Another function of GAM3298 is therefore inhibition of

Aldehyde dehydrogenase 3 family, member a2 (ALDH3A2, Accession NP_000373.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ALDH3A2.

[45399] Aldehyde dehydrogenase 9 family, member a1 (ALDH9A1, Accession NP_000687.2) is another GAM3298 target gene, herein designated TARGET GENE. ALDH9A1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ALDH9A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ALDH9A1 BINDING SITE, designated SEQ ID:3390, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45400] Another function of GAM3298 is therefore inhibition of Aldehyde dehydrogenase 9 family, member a1 (ALDH9A1, Accession NP_000687.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ALDH9A1.

[45401] Ac-like transposable element (ALTE, Accession NP_004720.1) is another GAM3298 target gene, herein designated TARGET GENE. ALTE BINDING SITE is a target

binding site found in the 3` untranslated region of mRNA encoded by ALTE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ALTE BINDING SITE, designated SEQ ID:525, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45402] Another function of GAM3298 is therefore inhibition of Ac-like transposable element (ALTE, Accession NP_004720.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ALTE.

[45403] ANAPC7 (Accession NP_057322.1) is another GAM3298 target gene, herein designated TARGET GENE. ANAPC7 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ANAPC7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ANAPC7 BINDING SITE, designated SEQ ID:16150, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45404] Another function of GAM3298 is therefore inhibition of

ANAPC7 (Accession NP_057322.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ANAPC7.

[45405] Apolipoprotein l, 1 (APOL1, Accession NP_663318.1) is another GAM3298 target gene, herein designated TARGET GENE. APOL1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by APOL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APOL1 BINDING SITE, designated SEQ ID:19832, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45406] Another function of GAM3298 is therefore inhibition of Apolipoprotein l, 1 (APOL1, Accession NP_663318.1), a gene which may participate in reverse cholesterol transport from peripheral cells to the liver. and therefore may be associated with Schizophrenia. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of Schizophrenia, and of other diseases and clinical conditions associated with APOL1.

[45407] The function of APOL1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Apolipoprotein l, 1 (APOL1, Accession NP_003652.2) is another GAM3298 target gene, herein designated TARGET GENE. APOL1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by APOL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APOL1 BINDING SITE, designated SEQ ID:19832, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45408] Another function of GAM3298 is therefore inhibition of Apolipoprotein l, 1 (APOL1, Accession NP_003652.2), a gene which may participate in reverse cholesterol transport from peripheral cells to the liver. and therefore may be associated with Schizophrenia. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of Schizophrenia, and of other diseases and clinical conditions associated with APOL1.

[45409] The function of APOL1 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Aquaporin 6, kidney specific (AQP6, Accession NP_445738.1) is another GAM3298 target gene, herein designated TARGET GENE. AQP6 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by AQP6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AQP6 BINDING SITE, designated SEQ ID:15019, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45410] Another function of GAM3298 is therefore inhibition of Aquaporin 6, kidney specific (AQP6, Accession NP_445738.1), a gene which participates in distinct physiologic function such as glomerular filtration, tubular endocytosis, and acid- base metabolism. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AQP6.

[45411] The function of AQP6 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM51.1.Ankyrin repeat and socs box-containing 1 (ASB1, Accession NP_057198.1) is another GAM3298 target gene, herein designated TARGET GENE. ASB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ASB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ASB1 BINDING SITE, designated SEQ ID:4892, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45412] Another function of GAM3298 is therefore inhibition of Ankyrin repeat and socs box-containing 1 (ASB1, Accession NP_057198.1), a gene which May mediate protein-protein interactions. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ASB1.

[45413] The function of ASB1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.Ankyrin repeat and socs box-containing 13 (ASB13, Accession NP_078977.2) is another GAM3298

target gene, herein designated TARGET GENE. ASB13 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ASB13, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ASB13 BINDING SITE, designated SEQ ID:17002, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45414] Another function of GAM3298 is therefore inhibition of Ankyrin repeat and socs box-containing 13 (ASB13, Accession NP_078977.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ASB13.

[45415] Ankyrin repeat and socs box-containing 9 (ASB9, Accession NP_076992.1) is another GAM3298 target gene, herein designated TARGET GENE. ASB9 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ASB9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ASB9 BINDING SITE, designated SEQ ID:4781, to the nucleotide sequence of

GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45416] Another function of GAM3298 is therefore inhibition of Ankyrin repeat and socs box-containing 9 (ASB9, Accession NP_076992.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ASB9.

[45417] Activating transcription factor 5 (ATF5, Accession NP_036200.2) is another GAM3298 target gene, herein designated TARGET GENE. ATF5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ATF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATF5 BINDING SITE, designated SEQ ID:15319, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45418] Another function of GAM3298 is therefore inhibition of Activating transcription factor 5 (ATF5, Accession NP_036200.2), a gene which binds to cAMP- inducible promoters and is involved in gene transcription. Accordingly, utilities of GAM3298 include diagnosis, prevention

and treatment of diseases and clinical conditions associated with ATF5.

[45419] The function of ATF5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM259.1.Atpase, na+/k+ transporting, alpha 2 (+) polypeptide (ATP1A2, Accession NP_000693.1) is another GAM3298 target gene, herein designated TARGET GENE. ATP1A2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ATP1A2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATP1A2 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45420] Another function of GAM3298 is therefore inhibition of Atpase, na+/k+ transporting, alpha 2 (+) polypeptide (ATP1A2, Accession NP_000693.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP1A2.

[45421] Betaine-homocysteine methyltransferase 2 (BHMT2, Ac-

cession NP_060084.2) is another GAM3298 target gene, herein designated TARGET GENE. BHMT2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BHMT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BHMT2 BINDING SITE, designated SEQ ID:6371, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45422] Another function of GAM3298 is therefore inhibition of Betaine-homocysteine methyltransferase 2 (BHMT2, Accession NP_060084.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BHMT2.

[45423] 3'(2'), 5'-bisphosphate nucleotidase 1 (BPNT1, Accession NP_006076.2) is another GAM3298 target gene, herein designated TARGET GENE. BPNT1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BPNT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

BPNT1 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45424] Another function of GAM3298 is therefore inhibition of 3'(2'), 5'-bisphosphate nucleotidase 1 (BPNT1, Accession NP_006076.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BPNT1.

[45425] 3'(2'), 5'-bisphosphate nucleotidase 1 (BPNT1, Accession XP_035738.1) is another GAM3298 target gene, herein designated TARGET GENE. BPNT1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BPNT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BPNT1 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45426] Another function of GAM3298 is therefore inhibition of 3'(2'), 5'-bisphosphate nucleotidase 1 (BPNT1, Accession XP_035738.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with BPNT1.

[45427] Btb (poz) domain containing 5 (BTBD5, Accession NP_060128.1) is another GAM3298 target gene, herein designated TARGET GENE. BTBD5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BTBD5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BTBD5 BINDING SITE, designated SEQ ID:11724, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45428] Another function of GAM3298 is therefore inhibition of Btb (poz) domain containing 5 (BTBD5, Accession NP_060128.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BTBD5.

[45429] Butyrophilin, subfamily 1, member a1 (BTN1A1, Accession NP_001723.1) is another GAM3298 target gene, herein designated TARGET GENE. BTN1A1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BTN1A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BTN1A1 BINDING SITE, designated SEQ ID:6923, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45430] Another function of GAM3298 is therefore inhibition of Butyrophilin, subfamily 1, member a1 (BTN1A1, Accession NP_001723.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BTN1A1.

[45431] Butyrophilin, subfamily 3, member a1 (BTN3A1, Accession NP_008979.2) is another GAM3298 target gene, herein designated TARGET GENE. BTN3A1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BTN3A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BTN3A1 BINDING SITE, designated SEQ ID:2811, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45432] Another function of GAM3298 is therefore inhibition of Butyrophilin, subfamily 3, member a1 (BTN3A1, Accession

NP_008979.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BTN3A1.

[45433] Butyrophilin, subfamily 3, member a2 (BTN3A2, Accession NP_008978.1) is another GAM3298 target gene, herein designated TARGET GENE. BTN3A2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BTN3A2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BTN3A2 BINDING SITE, designated SEQ ID:16180, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45434] Another function of GAM3298 is therefore inhibition of Butyrophilin, subfamily 3, member a2 (BTN3A2, Accession NP_008978.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BTN3A2.

[45435] C14orf145 (Accession NP_689659.1) is another GAM3298 target gene, herein designated TARGET GENE. C14orf145 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C14orf145, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C14orf145 BINDING SITE, designated SEQ ID:11312, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45436] Another function of GAM3298 is therefore inhibition of C14orf145 (Accession NP_689659.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C14orf145.

[45437] C14orf52 (Accession NP_660148.1) is another GAM3298 target gene, herein designated TARGET GENE. C14orf52 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C14orf52, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C14orf52 BINDING SITE, designated SEQ ID:14163, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45438] Another function of GAM3298 is therefore inhibition of C14orf52 (Accession NP_660148.1) . Accordingly, utilities

of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C14orf52.

[45439] Chromosome 1 open reading frame 34 (C1orf34, Accession XP_027172.1) is another GAM3298 target gene, herein designated TARGET GENE. C1orf34 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C1orf34, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C1orf34 BINDING SITE, designated SEQ ID:840, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45440] Another function of GAM3298 is therefore inhibition of Chromosome 1 open reading frame 34 (C1orf34, Accession XP_027172.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1orf34.

[45441] Chromosome 20 open reading frame 11 (C20orf11, Accession NP_060366.1) is another GAM3298 target gene, herein designated TARGET GENE. C20orf11 BINDING SITE is a target binding site found in the 3` untranslated re-

gion of mRNA encoded by C20orf11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf11 BINDING SITE, designated SEQ ID:19207, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45442] Another function of GAM3298 is therefore inhibition of Chromosome 20 open reading frame 11 (C20orf11, Accession NP_060366.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf11.

[45443] Chromosome 20 open reading frame 129 (C20orf129, Accession NP_112181.1) is another GAM3298 target gene, herein designated TARGET GENE. C20orf129 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C20orf129, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf129 BINDING SITE, designated SEQ ID:7920, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45444] Another function of GAM3298 is therefore inhibition of Chromosome 20 open reading frame 129 (C20orf129, Accession NP_112181.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf129.

[45445] Chromosome 20 open reading frame 164 (C20orf164, Accession NP_542790.1) is another GAM3298 target gene, herein designated TARGET GENE. C20orf164 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C20orf164, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf164 BINDING SITE, designated SEQ ID:9547, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45446] Another function of GAM3298 is therefore inhibition of Chromosome 20 open reading frame 164 (C20orf164, Accession NP_542790.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf164.

[45447] Chromosome 20 open reading frame 169 (C20orf169, Accession NP_291020.1) is another GAM3298 target gene,

herein designated TARGET GENE. C20orf169 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C20orf169, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf169 BINDING SITE, designated SEQ ID:16567, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45448] Another function of GAM3298 is therefore inhibition of Chromosome 20 open reading frame 169 (C20orf169, Accession NP_291020.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf169.

[45449] C6orf96 (Accession NP_060379.1) is another GAM3298 target gene, herein designated TARGET GENE. C6orf96 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C6orf96, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C6orf96 BINDING SITE, designated SEQ ID:3433, to the nucleotide sequence of GAM3298 RNA, herein designated

GAM RNA, also designated SEQ ID:259.

[45450] Another function of GAM3298 is therefore inhibition of C6orf96 (Accession NP_060379.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C6orf96.

[45451] Calcium-binding tyrosine-(y)-phosphorylation regulated (fibrousheathin 2) (CABYR, Accession NP_722452.1) is another GAM3298 target gene, herein designated TARGET GENE. CABYR BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CABYR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CABYR BINDING SITE, designated SEQ ID:5933, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45452] Another function of GAM3298 is therefore inhibition of Calcium-binding tyrosine-(y)-phosphorylation regulated (fibrousheathin 2) (CABYR, Accession NP_722452.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions as-

sociated with CABYR.

[45453] Calcium-binding tyrosine-(y)-phosphorylation regulated (fibrousheathin 2) (CABYR, Accession NP_036321.2) is another GAM3298 target gene, herein designated TARGET GENE. CABYR BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CABYR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CABYR BINDING SITE, designated SEQ ID:5933, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45454] Another function of GAM3298 is therefore inhibition of Calcium-binding tyrosine-(y)-phosphorylation regulated (fibrousheathin 2) (CABYR, Accession NP_036321.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CABYR.

[45455] Calcium/calmodulin-dependent protein kinase (cam kinase) ii delta (CAMK2D, Accession NP_742125.1) is another GAM3298 target gene, herein designated TARGET GENE. CAMK2D BINDING SITE is a target binding site

found in the 3` untranslated region of multiple transcripts of mRNA encoded by CAMK2D, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAMK2D BINDING SITE, designated SEQ ID:879, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45456] Another function of GAM3298 is therefore inhibition of Calcium/calmodulin-dependent protein kinase (cam kinase) ii delta (CAMK2D, Accession NP_742125.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAMK2D.

[45457] Calcium/calmodulin-dependent protein kinase (cam kinase) ii delta (CAMK2D, Accession NP_742126.1) is another GAM3298 target gene, herein designated TARGET GENE. CAMK2D BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CAMK2D, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAMK2D BIND-

ING SITE, designated SEQ ID:879, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45458] Another function of GAM3298 is therefore inhibition of Calcium/calmodulin-dependent protein kinase (cam kinase) ii delta (CAMK2D, Accession NP_742126.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAMK2D.

[45459] Cd28 antigen (tp44) (CD28, Accession NP_006130.1) is another GAM3298 target gene, herein designated TARGET GENE. CD28 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CD28, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CD28 BINDING SITE, designated SEQ ID:6352, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45460] Another function of GAM3298 is therefore inhibition of Cd28 antigen (tp44) (CD28, Accession NP_006130.1), a gene which possibly involved in t- cell activation. Accordingly, utilities of GAM3298 include diagnosis, prevention

and treatment of diseases and clinical conditions associated with CD28.

[45461] The function of CD28 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM94.1.Cd68 antigen (CD68, Accession NP_001242.1) is another GAM3298 target gene, herein designated TARGET GENE. CD68 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CD68, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CD68 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45462] Another function of GAM3298 is therefore inhibition of Cd68 antigen (CD68, Accession NP_001242.1), a gene which is highly expressed by human monocytes and tissue macrophages. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CD68.

[45463] The function of CD68 and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.1.Congenital dyserythropoietic anemia, type i (CDAN1, Accession XP_085300.3) is another GAM3298 target gene, herein designated TARGET GENE. CDAN1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CDAN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDAN1 BINDING SITE, designated SEQ ID:12246, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45464] Another function of GAM3298 is therefore inhibition of Congenital dyserythropoietic anemia, type i (CDAN1, Accession XP_085300.3) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDAN1.

[45465] Cofilin 2 (muscle) (CFL2, Accession NP_068733.1) is another GAM3298 target gene, herein designated TARGET GENE. CFL2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CFL2, corresponding to a target binding site such as BINDING

SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CFL2 BINDING SITE, designated SEQ ID:16417, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45466] Another function of GAM3298 is therefore inhibition of Cofilin 2 (muscle) (CFL2, Accession NP_068733.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CFL2.

[45467] Claudin 15 (CLDN15, Accession NP_612438.1) is another GAM3298 target gene, herein designated TARGET GENE. CLDN15 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CLDN15, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLDN15 BINDING SITE, designated SEQ ID:16467, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45468] Another function of GAM3298 is therefore inhibition of Claudin 15 (CLDN15, Accession NP_612438.1) . Accord-

ingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLDN15.

[45469] Cyclin m3 (CNNM3, Accession NP_060093.2) is another GAM3298 target gene, herein designated TARGET GENE. CNNM3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNNM3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CNNM3 BINDING SITE, designated SEQ ID:1930, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45470] Another function of GAM3298 is therefore inhibition of Cyclin m3 (CNNM3, Accession NP_060093.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CNNM3.

[45471] Coatomer protein complex, subunit alpha (COPA, Accession NP_004362.1) is another GAM3298 target gene, herein designated TARGET GENE. COPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by COPA, corresponding to a target bind-

ing site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COPA BINDING SITE, designated SEQ ID:815, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45472] Another function of GAM3298 is therefore inhibition of Coatomer protein complex, subunit alpha (COPA, Accession NP_004362.1), a gene which is invovled protein transport between the endoplasmic reticulum (ER) and Golgi compartments. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COPA.

[45473] The function of COPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.CRN (Accession NP_006578.2) is another GAM3298 target gene, herein designated TARGET GENE. CRN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CRN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

CRN BINDING SITE, designated SEQ ID:5868, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45474] Another function of GAM3298 is therefore inhibition of CRN (Accession NP_006578.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CRN.

[45475] CRTAM (Accession NP_062550.1) is another GAM3298 target gene, herein designated TARGET GENE. CRTAM BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CRTAM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CRTAM BINDING SITE, designated SEQ ID:840, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45476] Another function of GAM3298 is therefore inhibition of CRTAM (Accession NP_062550.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CRTAM.

[45477] CT120 (Accession NP_079068.1) is another GAM3298 target gene, herein designated TARGET GENE. CT120 BIND-

ING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CT120, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CT120 BINDING SITE, designated SEQ ID:13728, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45478] Another function of GAM3298 is therefore inhibition of CT120 (Accession NP_079068.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CT120.

[45479] CYCS (Accession NP_061820.1) is another GAM3298 target gene, herein designated TARGET GENE. CYCS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CYCS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYCS BINDING SITE, designated SEQ ID:5995, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45480] Another function of GAM3298 is therefore inhibition of

CYCS (Accession NP_061820.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYCS.

[45481] Dolichyl-diphosphooligosaccharide-protein glycosyltransferase (DDOST, Accession NP_005207.2) is another GAM3298 target gene, herein designated TARGET GENE. DDOST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DDOST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DDOST BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45482] Another function of GAM3298 is therefore inhibition of Dolichyl-diphosphooligosaccharide-protein glycosyltransferase (DDOST, Accession NP_005207.2), a gene which transfers high- mannose oligosaccharides to nascent polypeptides. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DDOST.

[45483] The function of DDOST and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM347.2.DDX51 (Accession NP_778236.1) is another GAM3298 target gene, herein designated TARGET GENE. DDX51 BINDING SITE1 and DDX51 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DDX51, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DDX51 BINDING SITE1 and DDX51 BINDING SITE2, designated SEQ ID:5949 and SEQ ID:6665 respectively, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45484] Another function of GAM3298 is therefore inhibition of DDX51 (Accession NP_778236.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DDX51.

[45485] DDX54 (Accession NP_076977.2) is another GAM3298 target gene, herein designated TARGET GENE. DDX54 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DDX54, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of DDX54 BINDING SITE, designated SEQ ID:8510, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45486] Another function of GAM3298 is therefore inhibition of DDX54 (Accession NP_076977.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DDX54.

[45487] Dead/h (asp-glu-ala-asp/his) box polypeptide 9 (rna helicase a, nuclear dna helicase ii; leukophysin) (DDX9, Accession NP_085077.1) is another GAM3298 target gene, herein designated TARGET GENE. DDX9 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by DDX9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DDX9 BINDING SITE, designated SEQ ID:12897, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45488] Another function of GAM3298 is therefore inhibition of Dead/h (asp-glu-ala-asp/his) box polypeptide 9 (rna helicase a, nuclear dna helicase ii; leukophysin) (DDX9, Ac-

cession NP_085077.1), a gene which plays an important role in transcription, RNA processing, translation, and RNA replication. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DDX9.

[45489] The function of DDX9 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM139.1.DKFZp434E1119 (Accession XP_210937.1) is another GAM3298 target gene, herein designated TARGET GENE. DKFZp434E1119 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp434E1119, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp434E1119 BINDING SITE, designated SEQ ID:13379, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45490] Another function of GAM3298 is therefore inhibition of DKFZp434E1119 (Accession XP_210937.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with DKFZp434E1119.

[45491] DKFZP586C1324 (Accession XP_045876.1) is another GAM3298 target gene, herein designated TARGET GENE. DKFZP586C1324 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP586C1324, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP586C1324 BINDING SITE, designated SEQ ID:13787, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45492] Another function of GAM3298 is therefore inhibition of DKFZP586C1324 (Accession XP_045876.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP586C1324.

[45493] DKFZp761G058 (Accession NP_689755.2) is another GAM3298 target gene, herein designated TARGET GENE. DKFZp761G058 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp761G058, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761G058 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45494] Another function of GAM3298 is therefore inhibition of DKFZp761G058 (Accession NP_689755.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761G058.

[45495] DKFZP761G1913 (Accession NP_113662.1) is another GAM3298 target gene, herein designated TARGET GENE. DKFZP761G1913 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP761G1913, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP761G1913 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45496] Another function of GAM3298 is therefore inhibition of DKFZP761G1913 (Accession NP_113662.1) . Accordingly,

utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP761G1913.

[45497] DKFZp761K1423 (Accession NP_060892.1) is another GAM3298 target gene, herein designated TARGET GENE. DKFZp761K1423 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by DKFZp761K1423, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761K1423 BINDING SITE, designated SEQ ID:13788, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45498] Another function of GAM3298 is therefore inhibition of DKFZp761K1423 (Accession NP_060892.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761K1423.

[45499] Endothelial differentiation, sphingolipid g-protein-coupled receptor, 3 (EDG3, Accession NP_005217.1) is another GAM3298 target gene, herein designated TARGET GENE. EDG3 BINDING SITE is a target binding site

found in the 5` untranslated region of mRNA encoded by EDG3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EDG3 BINDING SITE, designated SEQ ID:6456, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45500] Another function of GAM3298 is therefore inhibition of Endothelial differentiation, sphingolipid g-protein-coupled receptor, 3 (EDG3, Accession NP_005217.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EDG3.

[45501] Eukaryotic translation initiation factor 2c, 1 (EIF2C1, Accession NP_036331.1) is another GAM3298 target gene, herein designated TARGET GENE. EIF2C1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by EIF2C1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EIF2C1 BINDING SITE, designated SEQ ID:17274, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA,

also designated SEQ ID:259.

[45502] Another function of GAM3298 is therefore inhibition of Eukaryotic translation initiation factor 2c, 1 (EIF2C1, Accession NP_036331.1), a gene which plays an important role in the eukaryotic peptide chain initiation process. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EIF2C1.

[45503] The function of EIF2C1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM223.1.Erythrocyte membrane protein band 4.1 like 4b (EPB41L4B, Accession NP_061987.2) is another GAM3298 target gene, herein designated TARGET GENE. EPB41L4B BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by EPB41L4B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EPB41L4B BINDING SITE, designated SEQ ID:5651, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45504] Another function of GAM3298 is therefore inhibition of Erythrocyte membrane protein band 4.1 like 4b (EPB41L4B, Accession NP_061987.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EPB41L4B.

[45505] ERAP140 (Accession XP_059748.2) is another GAM3298 target gene, herein designated TARGET GENE. ERAP140 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ERAP140, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ERAP140 BINDING SITE, designated SEQ ID:7576, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45506] Another function of GAM3298 is therefore inhibition of ERAP140 (Accession XP_059748.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ERAP140.

[45507] V-erb-b2 erythroblastic leukemia viral oncogene homolog 3 (avian) (ERBB3, Accession NP_001973.1) is another

GAM3298 target gene, herein designated TARGET GENE. ERBB3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ERBB3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ERBB3 BINDING SITE, designated SEQ ID:6353, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45508] Another function of GAM3298 is therefore inhibition of V-erb-b2 erythroblastic leukemia viral oncogene homolog 3 (avian) (ERBB3, Accession NP_001973.1), a gene which binds and is activated by neuregulins and ntak. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ERBB3.

[45509] The function of ERBB3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.ET (Accession NP_077287.1) is another GAM3298 target gene, herein designated TARGET GENE. ET BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ET, correspond-

ing to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ET BINDING SITE, designated SEQ ID:1920, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45510] Another function of GAM3298 is therefore inhibition of ET (Accession NP_077287.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ET.

[45511] Epithelial v-like antigen 1 (EVA1, Accession NP_005788.1) is another GAM3298 target gene, herein designated TARGET GENE. EVA1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by EVA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EVA1 BINDING SITE, designated SEQ ID:11961, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45512] Another function of GAM3298 is therefore inhibition of Epithelial v-like antigen 1 (EVA1, Accession NP_005788.1)

. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EVA1.

[45513] Coagulation factor ii (thrombin) receptor-like 3 (F2RL3, Accession NP_003941.1) is another GAM3298 target gene, herein designated TARGET GENE. F2RL3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by F2RL3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of F2RL3 BINDING SITE, designated SEQ ID:12961, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45514] Another function of GAM3298 is therefore inhibition of Coagulation factor ii (thrombin) receptor-like 3 (F2RL3, Accession NP_003941.1), a gene which Protease- activated receptor 4; G protein- coupled receptor that increases phosphoinositide hydrolysis. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with F2RL3.

[45515] The function of F2RL3 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM72.1.Fanconi anemia, complementation group d2 (FANCD2, Accession NP_149075.2) is another GAM3298 target gene, herein designated TARGET GENE. FANCD2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FANCD2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FANCD2 BINDING SITE, designated SEQ ID:9757, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45516] Another function of GAM3298 is therefore inhibition of Fanconi anemia, complementation group d2 (FANCD2, Accession NP_149075.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FANCD2.

[45517] FBLP-1 (Accession XP_290943.1) is another GAM3298 target gene, herein designated TARGET GENE. FBLP-1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FBLP-1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FBLP-1 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45518] Another function of GAM3298 is therefore inhibition of FBLP-1 (Accession XP_290943.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FBLP-1.

[45519] F-box only protein 27 (FBXO27, Accession NP_849142.1) is another GAM3298 target gene, herein designated TARGET GENE. FBXO27 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FBXO27, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FBXO27 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45520] Another function of GAM3298 is therefore inhibition of F-box only protein 27 (FBXO27, Accession NP_849142.1) . Accordingly, utilities of GAM3298 include diagnosis, pre-

vention and treatment of diseases and clinical conditions associated with FBXO27.

[45521] F-box only protein 27 (FBXO27, Accession XP_059045.1) is another GAM3298 target gene, herein designated TARGET GENE. FBXO27 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FBXO27, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FBXO27 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45522] Another function of GAM3298 is therefore inhibition of F-box only protein 27 (FBXO27, Accession XP_059045.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FBXO27.

[45523] Fibroblast growth factor receptor 2 (bacteria-expressed kinase, keratinocyte growth factor receptor, craniofacial dysostosis 1, crouzon syndrome, pfeiffer syndrome, jackson-weiss syndrome) (FGFR2, Accession NP_075263.1) is another GAM3298 target gene, herein designated TARGET

GENE. FGFR2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FGFR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGFR2 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45524] Another function of GAM3298 is therefore inhibition of Fibroblast growth factor receptor 2 (bacteria-expressed kinase, keratinocyte growth factor receptor, craniofacial dysostosis 1, crouzon syndrome, pfeiffer syndrome, jackson-weiss syndrome) (FGFR2, Accession NP_075263.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGFR2.

[45525] Fibroblast growth factor receptor 2 (bacteria-expressed kinase, keratinocyte growth factor receptor, craniofacial dysostosis 1, crouzon syndrome, pfeiffer syndrome, jackson-weiss syndrome) (FGFR2, Accession NP_075262.1) is another GAM3298 target gene, herein designated TARGET GENE. FGFR2 BINDING SITE is a target binding site found

in the 3` untranslated region of multiple transcripts of mRNA encoded by FGFR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGFR2 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45526] Another function of GAM3298 is therefore inhibition of Fibroblast growth factor receptor 2 (bacteria-expressed kinase, keratinocyte growth factor receptor, craniofacial dysostosis 1, crouzon syndrome, pfeiffer syndrome, jackson-weiss syndrome) (FGFR2, Accession NP_075262.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGFR2.

[45527] Fk506 binding protein 14, 22 kda (FKBP14, Accession NP_060416.1) is another GAM3298 target gene, herein designated TARGET GENE. FKBP14 BINDING SITE1 and FKBP14 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FKBP14, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FKBP14 BINDING SITE1 and FKBP14 BINDING SITE2, designated SEQ ID:3706 and SEQ ID:17308 respectively, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45528] Another function of GAM3298 is therefore inhibition of Fk506 binding protein 14, 22 kda (FKBP14, Accession NP_060416.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FKBP14.

[45529] FKSG17 (Accession NP_114420.1) is another GAM3298 target gene, herein designated TARGET GENE. FKSG17 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FKSG17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FKSG17 BINDING SITE, designated SEQ ID:18744, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45530] Another function of GAM3298 is therefore inhibition of FKSG17 (Accession NP_114420.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with FKSG17.

[45531] FLJ10058 (Accession NP_060455.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ10058 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10058, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10058 BINDING SITE, designated SEQ ID:841, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45532] Another function of GAM3298 is therefore inhibition of FLJ10058 (Accession NP_060455.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10058.

[45533] FLJ10665 (Accession NP_060643.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ10665 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10665, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ10665 BINDING SITE, designated SEQ ID:3983, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45534] Another function of GAM3298 is therefore inhibition of FLJ10665 (Accession NP_060643.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10665.

[45535] FLJ10853 (Accession NP_060716.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ10853 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10853, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10853 BINDING SITE, designated SEQ ID:16806, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45536] Another function of GAM3298 is therefore inhibition of FLJ10853 (Accession NP_060716.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10853.

[45537] FLJ11011 (Accession NP_060769.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ11011 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ11011, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11011 BINDING SITE, designated SEQ ID:1510, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45538] Another function of GAM3298 is therefore inhibition of FLJ11011 (Accession NP_060769.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11011.

[45539] FLJ11259 (Accession NP_060840.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ11259 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ11259, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11259 BINDING SITE, designated SEQ ID:6479, to the

nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45540] Another function of GAM3298 is therefore inhibition of FLJ11259 (Accession NP_060840.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11259.

[45541] FLJ11267 (Accession NP_062553.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ11267 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ11267, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11267 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45542] Another function of GAM3298 is therefore inhibition of FLJ11267 (Accession NP_062553.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11267.

[45543] FLJ11996 (Accession NP_079252.1) is another GAM3298

target gene, herein designated TARGET GENE. FLJ11996 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ11996, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11996 BINDING SITE, designated SEQ ID:17309, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45544] Another function of GAM3298 is therefore inhibition of FLJ11996 (Accession NP_079252.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11996.

[45545] FLJ12132 (Accession NP_079256.2) is another GAM3298 target gene, herein designated TARGET GENE. FLJ12132 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12132, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12132 BINDING SITE, designated SEQ ID:18184, to the nucleotide sequence of GAM3298 RNA, herein designated

GAM RNA, also designated SEQ ID:259.

[45546] Another function of GAM3298 is therefore inhibition of FLJ12132 (Accession NP_079256.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12132.

[45547] FLJ12270 (Accession XP_290704.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ12270 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12270, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12270 BINDING SITE, designated SEQ ID:19970, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45548] Another function of GAM3298 is therefore inhibition of FLJ12270 (Accession XP_290704.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12270.

[45549] FLJ12595 (Accession NP_079270.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ12595

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12595, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12595 BINDING SITE, designated SEQ ID:2951, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45550] Another function of GAM3298 is therefore inhibition of FLJ12595 (Accession NP_079270.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12595.

[45551] FLJ13114 (Accession NP_078817.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ13114 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13114, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13114 BINDING SITE, designated SEQ ID:14687, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45552] Another function of GAM3298 is therefore inhibition of FLJ13114 (Accession NP_078817.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13114.

[45553] FLJ13456 (Accession XP_038291.5) is another GAM3298 target gene, herein designated TARGET GENE. FLJ13456 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13456, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13456 BINDING SITE, designated SEQ ID:20122, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45554] Another function of GAM3298 is therefore inhibition of FLJ13456 (Accession XP_038291.5) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13456.

[45555] FLJ13621 (Accession NP_079285.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ13621 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by FLJ13621, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13621 BINDING SITE, designated SEQ ID:16777, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45556] Another function of GAM3298 is therefore inhibition of FLJ13621 (Accession NP_079285.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13621.

[45557] FLJ14082 (Accession NP_079300.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ14082 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ14082, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14082 BINDING SITE, designated SEQ ID:13784, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45558] Another function of GAM3298 is therefore inhibition of

FLJ14082 (Accession NP_079300.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14082.

[45559] FLJ14107 (Accession NP_079302.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ14107 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ14107, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14107 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45560] Another function of GAM3298 is therefore inhibition of FLJ14107 (Accession NP_079302.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14107.

[45561] FLJ14399 (Accession NP_116169.2) is another GAM3298 target gene, herein designated TARGET GENE. FLJ14399 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ14399, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14399 BINDING SITE, designated SEQ ID:7464, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45562] Another function of GAM3298 is therefore inhibition of FLJ14399 (Accession NP_116169.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14399.

[45563] FLJ14642 (Accession NP_116207.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ14642 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ14642, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14642 BINDING SITE, designated SEQ ID:816, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45564] Another function of GAM3298 is therefore inhibition of FLJ14642 (Accession NP_116207.1) . Accordingly, utilities

of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14642.

[45565] FLJ14888 (Accession NP_116245.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ14888 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ14888, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14888 BINDING SITE, designated SEQ ID:17382, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45566] Another function of GAM3298 is therefore inhibition of FLJ14888 (Accession NP_116245.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14888.

[45567] FLJ20059 (Accession NP_060114.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ20059 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20059, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20059 BINDING SITE, designated SEQ ID:841, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45568] Another function of GAM3298 is therefore inhibition of FLJ20059 (Accession NP_060114.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20059.

[45569] FLJ20359 (Accession NP_060251.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ20359 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20359, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20359 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45570] Another function of GAM3298 is therefore inhibition of FLJ20359 (Accession NP_060251.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ20359.

[45571] FLJ20452 (Accession NP_060298.2) is another GAM3298 target gene, herein designated TARGET GENE. FLJ20452 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20452, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20452 BINDING SITE, designated SEQ ID:16046, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45572] Another function of GAM3298 is therefore inhibition of FLJ20452 (Accession NP_060298.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20452.

[45573] FLJ20464 (Accession NP_060304.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ20464 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20464, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ20464 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45574] Another function of GAM3298 is therefore inhibition of FLJ20464 (Accession NP_060304.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20464.

[45575] FLJ20582 (Accession XP_090970.4) is another GAM3298 target gene, herein designated TARGET GENE. FLJ20582 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ20582, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20582 BINDING SITE, designated SEQ ID:5838, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45576] Another function of GAM3298 is therefore inhibition of FLJ20582 (Accession XP_090970.4) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ20582.

[45577] FLJ20700 (Accession NP_060402.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ20700 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20700, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20700 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45578] Another function of GAM3298 is therefore inhibition of FLJ20700 (Accession NP_060402.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20700.

[45579] FLJ21144 (Accession NP_073611.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ21144 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ21144, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ21144 BINDING SITE, designated SEQ ID:20084, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45580] Another function of GAM3298 is therefore inhibition of FLJ21144 (Accession NP_073611.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ21144.

[45581] FLJ21369 (Accession NP_079078.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ21369 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ21369, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ21369 BINDING SITE, designated SEQ ID:18903, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45582] Another function of GAM3298 is therefore inhibition of FLJ21369 (Accession NP_079078.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ21369.

[45583] FLJ21673 (Accession NP_112160.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ21673 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ21673, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ21673 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45584] Another function of GAM3298 is therefore inhibition of FLJ21673 (Accession NP_112160.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ21673.

[45585] FLJ21870 (Accession NP_075392.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ21870 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ21870, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ21870 BINDING SITE, designated SEQ ID:3706, to the

nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45586] Another function of GAM3298 is therefore inhibition of FLJ21870 (Accession NP_075392.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ21870.

[45587] FLJ23042 (Accession NP_079433.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ23042 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23042, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23042 BINDING SITE, designated SEQ ID:6627, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45588] Another function of GAM3298 is therefore inhibition of FLJ23042 (Accession NP_079433.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23042.

[45589] FLJ23129 (Accession NP_079039.1) is another GAM3298

target gene, herein designated TARGET GENE. FLJ23129 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23129, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23129 BINDING SITE, designated SEQ ID:730, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45590] Another function of GAM3298 is therefore inhibition of FLJ23129 (Accession NP_079039.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23129.

[45591] FLJ23235 (Accession NP_079219.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ23235 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23235, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23235 BINDING SITE, designated SEQ ID:14990, to the nucleotide sequence of GAM3298 RNA, herein designated

GAM RNA, also designated SEQ ID:259.

[45592] Another function of GAM3298 is therefore inhibition of FLJ23235 (Accession NP_079219.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23235.

[45593] FLJ23360 (Accession NP_075564.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ23360 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23360, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23360 BINDING SITE, designated SEQ ID:17938, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45594] Another function of GAM3298 is therefore inhibition of FLJ23360 (Accession NP_075564.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23360.

[45595] FLJ23447 (Accession NP_079101.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ23447

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23447, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23447 BINDING SITE, designated SEQ ID:8160, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45596] Another function of GAM3298 is therefore inhibition of FLJ23447 (Accession NP_079101.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23447.

[45597] FLJ23499 (Accession NP_073598.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ23499 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23499, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23499 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45598] Another function of GAM3298 is therefore inhibition of FLJ23499 (Accession NP_073598.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23499.

[45599] FLJ23499 (Accession NP_073598.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ23499 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23499, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23499 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45600] Another function of GAM3298 is therefore inhibition of FLJ23499 (Accession NP_073598.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23499.

[45601] FLJ23751 (Accession NP_689495.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ23751 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by FLJ23751, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23751 BINDING SITE, designated SEQ ID:5102, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45602] Another function of GAM3298 is therefore inhibition of FLJ23751 (Accession NP_689495.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23751.

[45603] FLJ23834 (Accession NP_689963.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ23834 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23834, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23834 BINDING SITE, designated SEQ ID:8593, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45604] Another function of GAM3298 is therefore inhibition of

FLJ23834 (Accession NP_689963.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23834.

[45605] FLJ25179 (Accession NP_653271.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ25179 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ25179, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ25179 BINDING SITE, designated SEQ ID:8989, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45606] Another function of GAM3298 is therefore inhibition of FLJ25179 (Accession NP_653271.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ25179.

[45607] FLJ30317 (Accession NP_742148.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ30317 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ30317, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ30317 BINDING SITE, designated SEQ ID:14675, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45608] Another function of GAM3298 is therefore inhibition of FLJ30317 (Accession NP_742148.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ30317.

[45609] FLJ30899 (Accession NP_689943.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ30899 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ30899, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ30899 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45610] Another function of GAM3298 is therefore inhibition of FLJ30899 (Accession NP_689943.1) . Accordingly, utilities

of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ30899.

[45611] FLJ31208 (Accession NP_694568.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ31208 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ31208, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31208 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45612] Another function of GAM3298 is therefore inhibition of FLJ31208 (Accession NP_694568.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31208.

[45613] FLJ31434 (Accession NP_689709.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ31434 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ31434, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31434 BINDING SITE, designated SEQ ID:7468, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45614] Another function of GAM3298 is therefore inhibition of FLJ31434 (Accession NP_689709.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31434.

[45615] FLJ31659 (Accession NP_694572.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ31659 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ31659, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31659 BINDING SITE, designated SEQ ID:18701, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45616] Another function of GAM3298 is therefore inhibition of FLJ31659 (Accession NP_694572.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ31659.

[45617] FLJ31842 (Accession NP_689700.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ31842 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ31842, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31842 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45618] Another function of GAM3298 is therefore inhibition of FLJ31842 (Accession NP_689700.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31842.

[45619] FLJ31882 (Accession NP_689673.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ31882 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ31882, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ31882 BINDING SITE, designated SEQ ID:9354, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45620] Another function of GAM3298 is therefore inhibition of FLJ31882 (Accession NP_689673.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31882.

[45621] FLJ32029 (Accession NP_775853.2) is another GAM3298 target gene, herein designated TARGET GENE. FLJ32029 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32029, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32029 BINDING SITE, designated SEQ ID:840, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45622] Another function of GAM3298 is therefore inhibition of FLJ32029 (Accession NP_775853.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ32029.

[45623] FLJ32833 (Accession NP_689701.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ32833 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32833, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32833 BINDING SITE, designated SEQ ID:16532, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45624] Another function of GAM3298 is therefore inhibition of FLJ32833 (Accession NP_689701.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32833.

[45625] FLJ33167 (Accession NP_689896.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ33167 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ33167, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ33167 BINDING SITE, designated SEQ ID:10382, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45626] Another function of GAM3298 is therefore inhibition of FLJ33167 (Accession NP_689896.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ33167.

[45627] FLJ33505 (Accession NP_689530.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ33505 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ33505, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ33505 BINDING SITE, designated SEQ ID:17309, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45628] Another function of GAM3298 is therefore inhibition of FLJ33505 (Accession NP_689530.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ33505.

[45629] FLJ34917 (Accession NP_694995.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ34917 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ34917, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ34917 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45630] Another function of GAM3298 is therefore inhibition of FLJ34917 (Accession NP_694995.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ34917.

[45631] FLJ37228 (Accession NP_787113.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ37228 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ37228, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ37228 BINDING SITE, designated SEQ ID:3706, to the

nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45632] Another function of GAM3298 is therefore inhibition of FLJ37228 (Accession NP_787113.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ37228.

[45633] FLJ38690 (Accession NP_848608.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ38690 BINDING SITE1 and FLJ38690 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ38690, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38690 BINDING SITE1 and FLJ38690 BINDING SITE2, designated SEQ ID:3706 and SEQ ID:7398 respectively, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45634] Another function of GAM3298 is therefore inhibition of FLJ38690 (Accession NP_848608.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ38690.

[45635] FLJ38991 (Accession NP_776188.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ38991 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ38991, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38991 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45636] Another function of GAM3298 is therefore inhibition of FLJ38991 (Accession NP_776188.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38991.

[45637] FLJ39005 (Accession NP_848616.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ39005 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ39005, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ39005 BINDING SITE, designated SEQ ID:16046, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45638] Another function of GAM3298 is therefore inhibition of FLJ39005 (Accession NP_848616.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ39005.

[45639] FLJ90165 (Accession NP_699169.1) is another GAM3298 target gene, herein designated TARGET GENE. FLJ90165 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ90165, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ90165 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45640] Another function of GAM3298 is therefore inhibition of FLJ90165 (Accession NP_699169.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ90165.

[45641] FRSB (Accession NP_005678.2) is another GAM3298 target gene, herein designated TARGET GENE. FRSB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FRSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FRSB BINDING SITE, designated SEQ ID:840, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45642] Another function of GAM3298 is therefore inhibition of FRSB (Accession NP_005678.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FRSB.

[45643] Udp-n-acetyl-alpha-d-galactosamine:polypeptide n-acetylgalactosaminyltransferase 7 (galnac-t7) (GALNT7, Accession NP_473451.2) is another GAM3298 target gene, herein designated TARGET GENE. GALNT7 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by GALNT7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of GALNT7 BINDING SITE, designated SEQ ID:6665, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45644] Another function of GAM3298 is therefore inhibition of Udp-n-acetyl-alpha-d-galactosamine:polypeptide n-acetylgalactosaminyltransferase 7 (galnac-t7) (GALNT7, Accession NP_473451.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GALNT7.

[45645] GBP4 (Accession NP_443173.2) is another GAM3298 target gene, herein designated TARGET GENE. GBP4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GBP4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GBP4 BINDING SITE, designated SEQ ID:7240, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45646] Another function of GAM3298 is therefore inhibition of GBP4 (Accession NP_443173.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GBP4.

[45647] GK001 (Accession NP_064583.1) is another GAM3298 target gene, herein designated TARGET GENE. GK001 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GK001, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GK001 BINDING SITE, designated SEQ ID:11534, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45648] Another function of GAM3298 is therefore inhibition of GK001 (Accession NP_064583.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GK001.

[45649] Glyoxalase i (GLO1, Accession NP_006699.1) is another GAM3298 target gene, herein designated TARGET GENE. GLO1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GLO1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GLO1 BINDING SITE, designated SEQ ID:4209, to the nucleotide sequence of GAM3298 RNA, herein designated

GAM RNA, also designated SEQ ID:259.

[45650] Another function of GAM3298 is therefore inhibition of Glyoxalase i (GLO1, Accession NP_006699.1), a gene which converts methylglyoxal and glutathione to S- lactoylglutathione. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GLO1.

[45651] The function of GLO1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1550.1.G protein-coupled receptor 6 (GPR6, Accession NP_005275.1) is another GAM3298 target gene, herein designated TARGET GENE. GPR6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GPR6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPR6 BINDING SITE, designated SEQ ID:4712, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45652] Another function of GAM3298 is therefore inhibition of G protein-coupled receptor 6 (GPR6, Accession

NP_005275.1), a gene which transduces extracellular signals through heterotrimeric G proteins. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPR6.

[45653] The function of GPR6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM203.2.G protein-coupled receptor kinase 7 (GPRK7, Accession NP_631948.1) is another GAM3298 target gene, herein designated TARGET GENE. GPRK7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GPRK7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPRK7 BINDING SITE, designated SEQ ID:12104, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45654] Another function of GAM3298 is therefore inhibition of G protein-coupled receptor kinase 7 (GPRK7, Accession NP_631948.1), a gene which regulates the G protein-coupled receptors. Accordingly, utilities of GAM3298 in-

clude diagnosis, prevention and treatment of diseases and clinical conditions associated with GPRK7.

[45655] The function of GPRK7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.GRIPE (Accession XP_170749.4) is another GAM3298 target gene, herein designated TARGET GENE. GRIPE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by GRIPE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GRIPE BINDING SITE, designated SEQ ID:2629, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45656] Another function of GAM3298 is therefore inhibition of GRIPE (Accession XP_170749.4) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GRIPE.

[45657] Gtp binding protein 5 (putative) (GTPBP5, Accession NP_056481.1) is another GAM3298 target gene, herein designated TARGET GENE. GTPBP5 BINDING SITE is a target binding site found in the 3` untranslated region of

mRNA encoded by GTPBP5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GTPBP5 BINDING SITE, designated SEQ ID:17309, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45658] Another function of GAM3298 is therefore inhibition of Gtp binding protein 5 (putative) (GTPBP5, Accession NP_056481.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GTPBP5.

[45659] H2a histone family, member j (H2AFJ, Accession NP_060737.1) is another GAM3298 target gene, herein designated TARGET GENE. H2AFJ BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by H2AFJ, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of H2AFJ BINDING SITE, designated SEQ ID:11330, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45660] Another function of GAM3298 is therefore inhibition of H2a histone family, member j (H2AFJ, Accession NP_060737.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with H2AFJ.

[45661] HIG2 (Accession NP_037464.1) is another GAM3298 target gene, herein designated TARGET GENE. HIG2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HIG2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HIG2 BINDING SITE, designated SEQ ID:840, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45662] Another function of GAM3298 is therefore inhibition of HIG2 (Accession NP_037464.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HIG2.

[45663] Histocompatibility (minor) 13 (HM13, Accession NP_848697.1) is another GAM3298 target gene, herein designated TARGET GENE. HM13 BINDING SITE is a target binding site found in the 3` untranslated region of multi-

ple transcripts of mRNA encoded by HM13, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HM13 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45664] Another function of GAM3298 is therefore inhibition of Histocompatibility (minor) 13 (HM13, Accession NP_848697.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HM13.

[45665] HSPC043 (Accession NP_067041.1) is another GAM3298 target gene, herein designated TARGET GENE. HSPC043 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HSPC043, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSPC043 BINDING SITE, designated SEQ ID:16780, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45666] Another function of GAM3298 is therefore inhibition of

HSPC043 (Accession NP_067041.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSPC043.

[45667] Interferon-induced protein with tetratricopeptide repeats 4 (IFIT4, Accession NP_001540.2) is another GAM3298 target gene, herein designated TARGET GENE. IFIT4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IFIT4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IFIT4 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45668] Another function of GAM3298 is therefore inhibition of Interferon-induced protein with tetratricopeptide repeats 4 (IFIT4, Accession NP_001540.2), a gene which is an interferon- induced protein. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IFIT4.

[45669] The function of IFIT4 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM347.1.Interleukin 12 receptor, beta 2 (IL12RB2, Accession NP_001550.1) is another GAM3298 target gene, herein designated TARGET GENE. IL12RB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL12RB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL12RB2 BINDING SITE, designated SEQ ID:5498, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45670] Another function of GAM3298 is therefore inhibition of Interleukin 12 receptor, beta 2 (IL12RB2, Accession NP_001550.1), a gene which is involved in il- 12 transduction. binds to il- 12 with a low affinity. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL12RB2.

[45671] The function of IL12RB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM374.1.IL23R (Accession NP_653302.2) is another

GAM3298 target gene, herein designated TARGET GENE. IL23R BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL23R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL23R BINDING SITE, designated SEQ ID:15196, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45672] Another function of GAM3298 is therefore inhibition of IL23R (Accession NP_653302.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL23R.

[45673] Inositol polyphosphate-5-phosphatase, 75kda (INPP5B, Accession XP_300739.1) is another GAM3298 target gene, herein designated TARGET GENE. INPP5B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by INPP5B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of INPP5B BINDING SITE, designated SEQ ID:19238, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA,

also designated SEQ ID:259.

[45674] Another function of GAM3298 is therefore inhibition of Inositol polyphosphate-5-phosphatase, 75kda (INPP5B, Accession XP_300739.1), a gene which hydrolyzes the calcium- mobilizing second messenger ins(1,4,5)p3. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with INPP5B.

[45675] The function of INPP5B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.1.Interleukin-1 receptor-associated kinase 4 (IRAK4, Accession NP_057207.1) is another GAM3298 target gene, herein designated TARGET GENE. IRAK4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IRAK4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IRAK4 BINDING SITE, designated SEQ ID:16303, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45676] Another function of GAM3298 is therefore inhibition of

Interleukin-1 receptor-associated kinase 4 (IRAK4, Accession NP_057207.1), a gene which may function as an IRAK1 kinase, triggering a cascade of phosphorylation events. and therefore may be associated with Renal tumors. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of Renal tumors, and of other diseases and clinical conditions associated with IRAK4.

[45677] The function of IRAK4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.Il2-inducible t-cell kinase (ITK, Accession NP_005537.3) is another GAM3298 target gene, herein designated TARGET GENE. ITK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ITK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ITK BINDING SITE, designated SEQ ID:19655, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45678] Another function of GAM3298 is therefore inhibition of Il2-inducible t-cell kinase (ITK, Accession NP_005537.3),

a gene which plays a role in t cell proliferation and differentiation. and therefore may be associated with Myelodysplastic syndrome. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of Myelodysplastic syndrome, and of other diseases and clinical conditions associated with ITK.

[45679] The function of ITK and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.1.Potassium voltage-gated channel, shaker-related subfamily, member 7 (KCNA7, Accession NP_114092.2) is another GAM3298 target gene, herein designated TARGET GENE. KCNA7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KCNA7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNA7 BINDING SITE, designated SEQ ID:11198, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45680] Another function of GAM3298 is therefore inhibition of Potassium voltage-gated channel, shaker-related subfam-

ily, member 7 (KCNA7, Accession NP_114092.2), a gene which allows nerve cells to efficiently repolarize following an action potential. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNA7.

[45681] The function of KCNA7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.KIAA0356 (Accession XP_038655.4) is another GAM3298 target gene, herein designated TARGET GENE. KIAA0356 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0356, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0356 BINDING SITE, designated SEQ ID:11293, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45682] Another function of GAM3298 is therefore inhibition of KIAA0356 (Accession XP_038655.4) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

KIAA0356.

[45683] KIAA0391 (Accession NP_055487.1) is another GAM3298 target gene, herein designated TARGET GENE. KIAA0391 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0391, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0391 BINDING SITE, designated SEQ ID:18795, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45684] Another function of GAM3298 is therefore inhibition of KIAA0391 (Accession NP_055487.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0391.

[45685] KIAA0408 (Accession NP_055517.1) is another GAM3298 target gene, herein designated TARGET GENE. KIAA0408 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0408, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

KIAA0408 BINDING SITE, designated SEQ ID:7576, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45686] Another function of GAM3298 is therefore inhibition of KIAA0408 (Accession NP_055517.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0408.

[45687] KIAA0446 (Accession XP_044155.1) is another GAM3298 target gene, herein designated TARGET GENE. KIAA0446 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA0446, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0446 BINDING SITE, designated SEQ ID:1087, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45688] Another function of GAM3298 is therefore inhibition of KIAA0446 (Accession XP_044155.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0446.

[45689] KIAA0514 (Accession NP_055511.1) is another GAM3298 target gene, herein designated TARGET GENE. KIAA0514 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0514, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0514 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45690] Another function of GAM3298 is therefore inhibition of KIAA0514 (Accession NP_055511.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0514.

[45691] KIAA0628 (Accession NP_055604.1) is another GAM3298 target gene, herein designated TARGET GENE. KIAA0628 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0628, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0628 BINDING SITE, designated SEQ ID:5410, to the

nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45692] Another function of GAM3298 is therefore inhibition of KIAA0628 (Accession NP_055604.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0628.

[45693] KIAA0831 (Accession NP_055739.1) is another GAM3298 target gene, herein designated TARGET GENE. KIAA0831 BINDING SITE1 and KIAA0831 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA0831, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0831 BINDING SITE1 and KIAA0831 BINDING SITE2, designated SEQ ID:840 and SEQ ID:19561 respectively, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45694] Another function of GAM3298 is therefore inhibition of KIAA0831 (Accession NP_055739.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

KIAA0831.

[45695] KIAA0872 (Accession NP_055755.1) is another GAM3298 target gene, herein designated TARGET GENE. KIAA0872 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0872, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0872 BINDING SITE, designated SEQ ID:10203, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45696] Another function of GAM3298 is therefore inhibition of KIAA0872 (Accession NP_055755.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0872.

[45697] KIAA0889 (Accession NP_056192.1) is another GAM3298 target gene, herein designated TARGET GENE. KIAA0889 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by KIAA0889, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of KIAA0889 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45698] Another function of GAM3298 is therefore inhibition of KIAA0889 (Accession NP_056192.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0889.

[45699] KIAA0913 (Accession XP_044347.3) is another GAM3298 target gene, herein designated TARGET GENE. KIAA0913 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0913, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0913 BINDING SITE, designated SEQ ID:12246, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45700] Another function of GAM3298 is therefore inhibition of KIAA0913 (Accession XP_044347.3) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

KIAA0913.

[45701] KIAA0953 (Accession XP_039733.2) is another GAM3298 target gene, herein designated TARGET GENE. KIAA0953 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0953, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0953 BINDING SITE, designated SEQ ID:6353, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45702] Another function of GAM3298 is therefore inhibition of KIAA0953 (Accession XP_039733.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0953.

[45703] KIAA0982 (Accession NP_054742.1) is another GAM3298 target gene, herein designated TARGET GENE. KIAA0982 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0982, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

KIAA0982 BINDING SITE, designated SEQ ID:4347, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45704] Another function of GAM3298 is therefore inhibition of KIAA0982 (Accession NP_054742.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0982.

[45705] KIAA0992 (Accession NP_057165.2) is another GAM3298 target gene, herein designated TARGET GENE. KIAA0992 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0992, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0992 BINDING SITE, designated SEQ ID:16161, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45706] Another function of GAM3298 is therefore inhibition of KIAA0992 (Accession NP_057165.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0992.

[45707] KIAA1194 (Accession NP_056270.2) is another GAM3298 target gene, herein designated TARGET GENE. KIAA1194 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1194, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1194 BINDING SITE, designated SEQ ID:12999, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45708] Another function of GAM3298 is therefore inhibition of KIAA1194 (Accession NP_056270.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1194.

[45709] KIAA1377 (Accession XP_040708.2) is another GAM3298 target gene, herein designated TARGET GENE. KIAA1377 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1377, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1377 BINDING SITE, designated SEQ ID:9122, to the

nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45710] Another function of GAM3298 is therefore inhibition of KIAA1377 (Accession XP_040708.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1377.

[45711] KIAA1456 (Accession XP_040100.3) is another GAM3298 target gene, herein designated TARGET GENE. KIAA1456 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1456, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1456 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45712] Another function of GAM3298 is therefore inhibition of KIAA1456 (Accession XP_040100.3) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1456.

[45713] KIAA1559 (Accession XP_054472.2) is another GAM3298

target gene, herein designated TARGET GENE. KIAA1559 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1559, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1559 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45714] Another function of GAM3298 is therefore inhibition of KIAA1559 (Accession XP_054472.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1559.

[45715] KIAA1595 (Accession XP_045520.5) is another GAM3298 target gene, herein designated TARGET GENE. KIAA1595 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1595, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1595 BINDING SITE, designated SEQ ID:11215, to the nucleotide sequence of GAM3298 RNA, herein designated

GAM RNA, also designated SEQ ID:259.

[45716] Another function of GAM3298 is therefore inhibition of KIAA1595 (Accession XP_045520.5) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1595.

[45717] KIAA1630 (Accession NP_061176.2) is another GAM3298 target gene, herein designated TARGET GENE. KIAA1630 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1630, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1630 BINDING SITE, designated SEQ ID:8338, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45718] Another function of GAM3298 is therefore inhibition of KIAA1630 (Accession NP_061176.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1630.

[45719] KIAA1724 (Accession XP_040280.2) is another GAM3298 target gene, herein designated TARGET GENE. KIAA1724

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1724, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1724 BINDING SITE, designated SEQ ID:20160, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45720] Another function of GAM3298 is therefore inhibition of KIAA1724 (Accession XP_040280.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1724.

[45721] KIAA1727 (Accession XP_034262.4) is another GAM3298 target gene, herein designated TARGET GENE. KIAA1727 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1727, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1727 BINDING SITE, designated SEQ ID:10851, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45722] Another function of GAM3298 is therefore inhibition of KIAA1727 (Accession XP_034262.4) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1727.

[45723] KIAA1735 (Accession XP_290496.1) is another GAM3298 target gene, herein designated TARGET GENE. KIAA1735 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1735, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1735 BINDING SITE, designated SEQ ID:6665, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45724] Another function of GAM3298 is therefore inhibition of KIAA1735 (Accession XP_290496.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1735.

[45725] KIAA1771 (Accession XP_086404.1) is another GAM3298 target gene, herein designated TARGET GENE. KIAA1771 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by KIAA1771, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1771 BINDING SITE, designated SEQ ID:7993, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45726] Another function of GAM3298 is therefore inhibition of KIAA1771 (Accession XP_086404.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1771.

[45727] KIAA1871 (Accession XP_290737.1) is another GAM3298 target gene, herein designated TARGET GENE. KIAA1871 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1871, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1871 BINDING SITE, designated SEQ ID:18994, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45728] Another function of GAM3298 is therefore inhibition of

KIAA1871 (Accession XP_290737.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1871.

[45729] KIAA1950 (Accession XP_166532.1) is another GAM3298 target gene, herein designated TARGET GENE. KIAA1950 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1950, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1950 BINDING SITE, designated SEQ ID:6327, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45730] Another function of GAM3298 is therefore inhibition of KIAA1950 (Accession XP_166532.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1950.

[45731] KIF11 (Accession NP_004514.2) is another GAM3298 target gene, herein designated TARGET GENE. KIF11 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIF11, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIF11 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45732] Another function of GAM3298 is therefore inhibition of KIF11 (Accession NP_004514.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIF11.

[45733] Kinesin family member 3b (KIF3B, Accession NP_004789.1) is another GAM3298 target gene, herein designated TARGET GENE. KIF3B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIF3B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIF3B BINDING SITE, designated SEQ ID:14234, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45734] Another function of GAM3298 is therefore inhibition of Kinesin family member 3b (KIF3B, Accession

NP_004789.1), a gene which is a microtubule- based anterograde translocator for membranous organelles. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIF3B.

[45735] The function of KIF3B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.Karyopherin (importin) beta 3 (KPNB3, Accession NP_002262.3) is another GAM3298 target gene, herein designated TARGET GENE. KPNB3 BINDING SITE1 and KPNB3 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KPNB3, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KPNB3 BINDING SITE1 and KPNB3 BINDING SITE2, designated SEQ ID:7119 and SEQ ID:18083 respectively, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45736] Another function of GAM3298 is therefore inhibition of Karyopherin (importin) beta 3 (KPNB3, Accession NP_002262.3) . Accordingly, utilities of GAM3298 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with KPNB3.

[45737] Kringle containing transmembrane protein 1 (KREMEN1, Accession NP_114434.3) is another GAM3298 target gene, herein designated TARGET GENE. KREMEN1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by KREMEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KREMEN1 BINDING SITE, designated SEQ ID:841, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45738] Another function of GAM3298 is therefore inhibition of Kringle containing transmembrane protein 1 (KREMEN1, Accession NP_114434.3) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KREMEN1.

[45739] Link-GEFII (Accession NP_057423.1) is another GAM3298 target gene, herein designated TARGET GENE. Link-GEFII BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by Link-GEFII, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of Link-GEFII BINDING SITE, designated SEQ ID:15182, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45740] Another function of GAM3298 is therefore inhibition of Link-GEFII (Accession NP_057423.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with Link-GEFII.

[45741] LOC115129 (Accession XP_055292.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC115129 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC115129, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC115129 BINDING SITE, designated SEQ ID:8061, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45742] Another function of GAM3298 is therefore inhibition of LOC115129 (Accession XP_055292.1) . Accordingly, utili-

ties of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC115129.

[45743] LOC116143 (Accession NP_612467.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC116143 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC116143, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC116143 BINDING SITE, designated SEQ ID:7468, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45744] Another function of GAM3298 is therefore inhibition of LOC116143 (Accession NP_612467.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC116143.

[45745] LOC116228 (Accession XP_300752.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC116228 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

LOC116228, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC116228 BINDING SITE, designated SEQ ID:815, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45746] Another function of GAM3298 is therefore inhibition of LOC116228 (Accession XP_300752.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC116228.

[45747] LOC124411 (Accession XP_058804.4) is another GAM3298 target gene, herein designated TARGET GENE. LOC124411 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC124411, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC124411 BINDING SITE, designated SEQ ID:9305, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45748] Another function of GAM3298 is therefore inhibition of LOC124411 (Accession XP_058804.4) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC124411.

[45749] LOC130574 (Accession XP_059451.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC130574 BINDING SITE1 and LOC130574 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC130574, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC130574 BINDING SITE1 and LOC130574 BINDING SITE2, designated SEQ ID:5219 and SEQ ID:10337 respectively, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45750] Another function of GAM3298 is therefore inhibition of LOC130574 (Accession XP_059451.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC130574.

[45751] LOC132724 (Accession XP_068002.4) is another

GAM3298 target gene, herein designated TARGET GENE. LOC132724 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC132724, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC132724 BINDING SITE, designated SEQ ID:8048, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45752] Another function of GAM3298 is therefore inhibition of LOC132724 (Accession XP_068002.4) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC132724.

[45753] LOC134147 (Accession NP_620164.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC134147 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC134147, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC134147 BINDING SITE, desig-

nated SEQ ID:11885, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45754] Another function of GAM3298 is therefore inhibition of LOC134147 (Accession NP_620164.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC134147.

[45755] LOC142779 (Accession XP_084337.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC142779 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC142779, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC142779 BINDING SITE, designated SEQ ID:9354, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45756] Another function of GAM3298 is therefore inhibition of LOC142779 (Accession XP_084337.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC142779.

[45757] LOC143458 (Accession NP_777562.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC143458 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC143458, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC143458 BINDING SITE, designated SEQ ID:19260, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45758] Another function of GAM3298 is therefore inhibition of LOC143458 (Accession NP_777562.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC143458.

[45759] LOC144817 (Accession XP_084972.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC144817 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC144817, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144817 BINDING SITE, designated SEQ ID:7468, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45760] Another function of GAM3298 is therefore inhibition of LOC144817 (Accession XP_084972.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144817.

[45761] LOC144845 (Accession NP_612483.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC144845 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC144845, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144845 BINDING SITE, designated SEQ ID:7468, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45762] Another function of GAM3298 is therefore inhibition of LOC144845 (Accession NP_612483.1) . Accordingly, utili-

ties of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144845.

[45763] LOC145231 (Accession XP_096740.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC145231 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC145231, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145231 BINDING SITE, designated SEQ ID:16046, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45764] Another function of GAM3298 is therefore inhibition of LOC145231 (Accession XP_096740.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145231.

[45765] LOC145663 (Accession XP_096829.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC145663 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

LOC145663, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145663 BINDING SITE, designated SEQ ID:6352, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45766] Another function of GAM3298 is therefore inhibition of LOC145663 (Accession XP_096829.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145663.

[45767] LOC145757 (Accession XP_085227.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC145757 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC145757, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145757 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45768] Another function of GAM3298 is therefore inhibition of LOC145757 (Accession XP_085227.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145757.

[45769] LOC145824 (Accession XP_085247.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC145824 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC145824, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145824 BINDING SITE, designated SEQ ID:14990, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45770] Another function of GAM3298 is therefore inhibition of LOC145824 (Accession XP_085247.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145824.

[45771] LOC146013 (Accession XP_096919.1) is another GAM3298 target gene, herein designated TARGET GENE.

LOC146013 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC146013, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146013 BINDING SITE, designated SEQ ID:8603, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45772] Another function of GAM3298 is therefore inhibition of LOC146013 (Accession XP_096919.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146013.

[45773] LOC146958 (Accession XP_097142.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC146958 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC146958, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146958 BINDING SITE, designated SEQ ID:11424, to the nucleotide sequence of

GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45774] Another function of GAM3298 is therefore inhibition of LOC146958 (Accession XP_097142.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146958.

[45775] LOC147841 (Accession XP_085924.2) is another GAM3298 target gene, herein designated TARGET GENE. LOC147841 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC147841, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147841 BINDING SITE, designated SEQ ID:16695, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45776] Another function of GAM3298 is therefore inhibition of LOC147841 (Accession XP_085924.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147841.

[45777] LOC149464 (Accession XP_097645.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC149464 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC149464, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149464 BINDING SITE, designated SEQ ID:7723, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45778] Another function of GAM3298 is therefore inhibition of LOC149464 (Accession XP_097645.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149464.

[45779] LOC149910 (Accession XP_086699.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC149910 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC149910, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC149910 BINDING SITE, designated SEQ ID:3001, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45780] Another function of GAM3298 is therefore inhibition of LOC149910 (Accession XP_086699.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149910.

[45781] LOC150225 (Accession XP_097870.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC150225 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC150225, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150225 BINDING SITE, designated SEQ ID:10727, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45782] Another function of GAM3298 is therefore inhibition of LOC150225 (Accession XP_097870.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC150225.

[45783] LOC150287 (Accession XP_086889.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC150287 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC150287, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150287 BINDING SITE, designated SEQ ID:3702, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45784] Another function of GAM3298 is therefore inhibition of LOC150287 (Accession XP_086889.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150287.

[45785] LOC150299 (Accession XP_097869.2) is another GAM3298 target gene, herein designated TARGET GENE. LOC150299 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC150299, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150299 BINDING SITE, designated SEQ ID:12013, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45786] Another function of GAM3298 is therefore inhibition of LOC150299 (Accession XP_097869.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150299.

[45787] LOC150630 (Accession XP_097931.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC150630 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC150630, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150630 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45788] Another function of GAM3298 is therefore inhibition of

LOC150630 (Accession XP_097931.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150630.

[45789] LOC151068 (Accession XP_098000.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC151068 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC151068, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151068 BINDING SITE, designated SEQ ID:12510, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45790] Another function of GAM3298 is therefore inhibition of LOC151068 (Accession XP_098000.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151068.

[45791] LOC151438 (Accession XP_098060.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC151438 BINDING SITE is a target binding site found in

the 3` untranslated region of mRNA encoded by LOC151438, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151438 BINDING SITE, designated SEQ ID:6221, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45792] Another function of GAM3298 is therefore inhibition of LOC151438 (Accession XP_098060.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151438.

[45793] LOC153338 (Accession XP_098361.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC153338 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC153338, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC153338 BINDING SITE, designated SEQ ID:16145, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:259.

[45794] Another function of GAM3298 is therefore inhibition of LOC153338 (Accession XP_098361.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153338.

[45795] LOC153561 (Accession XP_087708.6) is another GAM3298 target gene, herein designated TARGET GENE. LOC153561 BINDING SITE1 and LOC153561 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC153561, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC153561 BINDING SITE1 and LOC153561 BINDING SITE2, designated SEQ ID:4776 and SEQ ID:3706 respectively, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45796] Another function of GAM3298 is therefore inhibition of LOC153561 (Accession XP_087708.6) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153561.

[45797] LOC153682 (Accession XP_098414.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC153682 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC153682, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC153682 BINDING SITE, designated SEQ ID:8989, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45798] Another function of GAM3298 is therefore inhibition of LOC153682 (Accession XP_098414.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153682.

[45799] LOC153727 (Accession XP_098422.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC153727 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC153727, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC153727 BINDING SITE, designated SEQ ID:6353, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45800] Another function of GAM3298 is therefore inhibition of LOC153727 (Accession XP_098422.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153727.

[45801] LOC155006 (Accession XP_088117.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC155006 BINDING SITE1 and LOC155006 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC155006, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC155006 BINDING SITE1 and LOC155006 BINDING SITE2, designated SEQ ID:12246 and SEQ ID:3706 respectively, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45802] Another function of GAM3298 is therefore inhibition of LOC155006 (Accession XP_088117.1) . Accordingly, utili-

ties of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC155006.

[45803] LOC157531 (Accession XP_212210.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC157531 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by LOC157531, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC157531 BINDING SITE, designated SEQ ID:15279, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45804] Another function of GAM3298 is therefore inhibition of LOC157531 (Accession XP_212210.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157531.

[45805] LOC158434 (Accession XP_098939.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC158434 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

LOC158434, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158434 BINDING SITE, designated SEQ ID:8220, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45806] Another function of GAM3298 is therefore inhibition of LOC158434 (Accession XP_098939.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158434.

[45807] LOC159036 (Accession XP_099018.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC159036 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC159036, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC159036 BINDING SITE, designated SEQ ID:816, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45808] Another function of GAM3298 is therefore inhibition of LOC159036 (Accession XP_099018.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC159036.

[45809] LOC163259 (Accession XP_088769.6) is another GAM3298 target gene, herein designated TARGET GENE. LOC163259 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC163259, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC163259 BINDING SITE, designated SEQ ID:7144, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45810] Another function of GAM3298 is therefore inhibition of LOC163259 (Accession XP_088769.6) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC163259.

[45811] LOC165324 (Accession XP_092518.1) is another GAM3298 target gene, herein designated TARGET GENE.

LOC165324 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC165324, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC165324 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45812] Another function of GAM3298 is therefore inhibition of LOC165324 (Accession XP_092518.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC165324.

[45813] LOC166522 (Accession XP_093920.5) is another GAM3298 target gene, herein designated TARGET GENE. LOC166522 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC166522, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC166522 BINDING SITE, designated SEQ ID:16780, to the nucleotide sequence of

GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45814] Another function of GAM3298 is therefore inhibition of LOC166522 (Accession XP_093920.5) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC166522.

[45815] LOC196540 (Accession XP_116933.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC196540 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC196540, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC196540 BINDING SITE, designated SEQ ID:2952, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45816] Another function of GAM3298 is therefore inhibition of LOC196540 (Accession XP_116933.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC196540.

[45817] LOC199733 (Accession XP_117123.2) is another GAM3298 target gene, herein designated TARGET GENE. LOC199733 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC199733, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC199733 BINDING SITE, designated SEQ ID:7468, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45818] Another function of GAM3298 is therefore inhibition of LOC199733 (Accession XP_117123.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC199733.

[45819] LOC200008 (Accession XP_114089.3) is another GAM3298 target gene, herein designated TARGET GENE. LOC200008 BINDING SITE1 and LOC200008 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC200008, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the com-

plementarity of the nucleotide sequences of LOC200008 BINDING SITE1 and LOC200008 BINDING SITE2, designated SEQ ID:6353 and SEQ ID:3706 respectively, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45820] Another function of GAM3298 is therefore inhibition of LOC200008 (Accession XP_114089.3) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC200008.

[45821] LOC201475 (Accession XP_113967.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC201475 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC201475, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC201475 BINDING SITE, designated SEQ ID:9894, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45822] Another function of GAM3298 is therefore inhibition of LOC201475 (Accession XP_113967.1) . Accordingly, utili-

ties of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201475.

[45823] LOC201810 (Accession XP_114383.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC201810 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC201810, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC201810 BINDING SITE, designated SEQ ID:840, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45824] Another function of GAM3298 is therefore inhibition of LOC201810 (Accession XP_114383.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201810.

[45825] LOC202134 (Accession XP_117365.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC202134 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by

LOC202134, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC202134 BINDING SITE, designated SEQ ID:19238, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45826] Another function of GAM3298 is therefore inhibition of LOC202134 (Accession XP_117365.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC202134.

[45827] LOC220739 (Accession XP_167548.3) is another GAM3298 target gene, herein designated TARGET GENE. LOC220739 BINDING SITE1 and LOC220739 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC220739, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC220739 BINDING SITE1 and LOC220739 BINDING SITE2, designated SEQ ID:16984 and SEQ ID:5839 respectively, to the nucleotide sequence of GAM3298 RNA, herein designated

GAM RNA, also designated SEQ ID:259.

[45828] Another function of GAM3298 is therefore inhibition of LOC220739 (Accession XP_167548.3) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC220739.

[45829] LOC221035 (Accession XP_167640.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC221035 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC221035, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221035 BINDING SITE, designated SEQ ID:18581, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45830] Another function of GAM3298 is therefore inhibition of LOC221035 (Accession XP_167640.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221035.

[45831] LOC221601 (Accession XP_168071.1) is another

GAM3298 target gene, herein designated TARGET GENE. LOC221601 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC221601, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221601 BINDING SITE, designated SEQ ID:10387, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45832] Another function of GAM3298 is therefore inhibition of LOC221601 (Accession XP_168071.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221601.

[45833] LOC221931 (Accession XP_168348.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC221931 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC221931, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221931 BINDING SITE, desig-

nated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45834] Another function of GAM3298 is therefore inhibition of LOC221931 (Accession XP_168348.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221931.

[45835] LOC221954 (Accession XP_168349.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC221954 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC221954, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221954 BINDING SITE, designated SEQ ID:15872, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45836] Another function of GAM3298 is therefore inhibition of LOC221954 (Accession XP_168349.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC221954.

[45837] LOC222060 (Accession XP_168427.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC222060 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC222060, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC222060 BINDING SITE, designated SEQ ID:14995, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45838] Another function of GAM3298 is therefore inhibition of LOC222060 (Accession XP_168427.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC222060.

[45839] LOC222160 (Accession XP_168431.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC222160 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC222160, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC222160 BINDING SITE, designated SEQ ID:8175, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45840] Another function of GAM3298 is therefore inhibition of LOC222160 (Accession XP_168431.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC222160.

[45841] LOC253782 (Accession XP_171023.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC253782 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC253782, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC253782 BINDING SITE, designated SEQ ID:10198, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45842] Another function of GAM3298 is therefore inhibition of LOC253782 (Accession XP_171023.1) . Accordingly, utili-

ties of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC253782.

[45843] LOC255185 (Accession XP_170826.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC255185 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC255185, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC255185 BINDING SITE, designated SEQ ID:6353, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45844] Another function of GAM3298 is therefore inhibition of LOC255185 (Accession XP_170826.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255185.

[45845] LOC282915 (Accession XP_212579.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC282915 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

LOC282915, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282915 BINDING SITE, designated SEQ ID:19337, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45846] Another function of GAM3298 is therefore inhibition of LOC282915 (Accession XP_212579.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282915.

[45847] LOC282951 (Accession XP_212627.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC282951 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC282951, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282951 BINDING SITE, designated SEQ ID:19337, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45848] Another function of GAM3298 is therefore inhibition of LOC282951 (Accession XP_212627.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282951.

[45849] LOC282973 (Accession XP_208463.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC282973 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC282973, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282973 BINDING SITE, designated SEQ ID:7468, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45850] Another function of GAM3298 is therefore inhibition of LOC282973 (Accession XP_208463.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282973.

[45851] LOC283005 (Accession XP_208481.1) is another GAM3298 target gene, herein designated TARGET GENE.

LOC283005 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283005, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283005 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45852] Another function of GAM3298 is therefore inhibition of LOC283005 (Accession XP_208481.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283005.

[45853] LOC283061 (Accession XP_210875.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC283061 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283061, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283061 BINDING SITE, designated SEQ ID:841, to the nucleotide sequence of

GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45854] Another function of GAM3298 is therefore inhibition of LOC283061 (Accession XP_210875.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283061.

[45855] LOC283199 (Accession XP_210929.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC283199 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283199, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283199 BINDING SITE, designated SEQ ID:14868, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45856] Another function of GAM3298 is therefore inhibition of LOC283199 (Accession XP_210929.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283199.

[45857] LOC283230 (Accession XP_210945.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC283230 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283230, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283230 BINDING SITE, designated SEQ ID:7329, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45858] Another function of GAM3298 is therefore inhibition of LOC283230 (Accession XP_210945.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283230.

[45859] LOC283289 (Accession XP_210960.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC283289 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283289, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC283289 BINDING SITE, designated SEQ ID:19239, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45860] Another function of GAM3298 is therefore inhibition of LOC283289 (Accession XP_210960.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283289.

[45861] LOC283460 (Accession XP_208682.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC283460 BINDING SITE1 and LOC283460 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283460, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283460 BINDING SITE1 and LOC283460 BINDING SITE2, designated SEQ ID:3706 and SEQ ID:7398 respectively, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45862] Another function of GAM3298 is therefore inhibition of LOC283460 (Accession XP_208682.1) . Accordingly, utili-

ties of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283460.

[45863] LOC283475 (Accession XP_211056.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC283475 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283475, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283475 BINDING SITE, designated SEQ ID:8626, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45864] Another function of GAM3298 is therefore inhibition of LOC283475 (Accession XP_211056.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283475.

[45865] LOC283508 (Accession XP_211070.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC283508 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

LOC283508, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283508 BINDING SITE, designated SEQ ID:8580, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45866] Another function of GAM3298 is therefore inhibition of LOC283508 (Accession XP_211070.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283508.

[45867] LOC283672 (Accession XP_211152.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC283672 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283672, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283672 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45868] Another function of GAM3298 is therefore inhibition of LOC283672 (Accession XP_211152.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283672.

[45869] LOC283690 (Accession XP_211167.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC283690 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283690, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283690 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45870] Another function of GAM3298 is therefore inhibition of LOC283690 (Accession XP_211167.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283690.

[45871] LOC283693 (Accession XP_208788.1) is another GAM3298 target gene, herein designated TARGET GENE.

LOC283693 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283693, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283693 BINDING SITE, designated SEQ ID:16061, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45872] Another function of GAM3298 is therefore inhibition of LOC283693 (Accession XP_208788.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283693.

[45873] LOC283760 (Accession XP_208826.2) is another GAM3298 target gene, herein designated TARGET GENE. LOC283760 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283760, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283760 BINDING SITE, designated SEQ ID:11927, to the nucleotide sequence of

GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45874] Another function of GAM3298 is therefore inhibition of LOC283760 (Accession XP_208826.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283760.

[45875] LOC283891 (Accession XP_208889.2) is another GAM3298 target gene, herein designated TARGET GENE. LOC283891 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283891, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283891 BINDING SITE, designated SEQ ID:5840, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45876] Another function of GAM3298 is therefore inhibition of LOC283891 (Accession XP_208889.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283891.

[45877] LOC283924 (Accession XP_208906.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC283924 BINDING SITE1 and LOC283924 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283924, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283924 BINDING SITE1 and LOC283924 BINDING SITE2, designated SEQ ID:3706 and SEQ ID:6479 respectively, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45878] Another function of GAM3298 is therefore inhibition of LOC283924 (Accession XP_208906.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283924.

[45879] LOC283985 (Accession NP_835229.1) is another

GAM3298 target gene, herein designated TARGET GENE. LOC283985 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LOC283985, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283985 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45880] Another function of GAM3298 is therefore inhibition of LOC283985 (Accession NP_835229.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283985.

[45881] LOC283985 (Accession XP_208951.2) is another GAM3298 target gene, herein designated TARGET GENE. LOC283985 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LOC283985, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283985

BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45882] Another function of GAM3298 is therefore inhibition of LOC283985 (Accession XP_208951.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283985.

[45883] LOC284014 (Accession XP_211300.2) is another GAM3298 target gene, herein designated TARGET GENE. LOC284014 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284014, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284014 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45884] Another function of GAM3298 is therefore inhibition of LOC284014 (Accession XP_211300.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC284014.

[45885] LOC284024 (Accession XP_208970.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC284024 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284024, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284024 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45886] Another function of GAM3298 is therefore inhibition of LOC284024 (Accession XP_208970.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284024.

[45887] LOC284161 (Accession XP_209047.2) is another GAM3298 target gene, herein designated TARGET GENE. LOC284161 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284161, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284161 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45888] Another function of GAM3298 is therefore inhibition of LOC284161 (Accession XP_209047.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284161.

[45889] LOC284313 (Accession XP_209116.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC284313 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284313, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284313 BINDING SITE, designated SEQ ID:16046, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45890] Another function of GAM3298 is therefore inhibition of LOC284313 (Accession XP_209116.1) . Accordingly, utili-

ties of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284313.

[45891] LOC284371 (Accession XP_209155.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC284371 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284371, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284371 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45892] Another function of GAM3298 is therefore inhibition of LOC284371 (Accession XP_209155.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284371.

[45893] LOC284417 (Accession XP_209187.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC284417 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

LOC284417, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284417 BINDING SITE, designated SEQ ID:6665, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45894] Another function of GAM3298 is therefore inhibition of LOC284417 (Accession XP_209187.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284417.

[45895] LOC284461 (Accession XP_211476.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC284461 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284461, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284461 BINDING SITE, designated SEQ ID:17236, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45896] Another function of GAM3298 is therefore inhibition of LOC284461 (Accession XP_211476.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284461.

[45897] LOC284475 (Accession XP_211478.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC284475 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284475, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284475 BINDING SITE, designated SEQ ID:8335, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45898] Another function of GAM3298 is therefore inhibition of LOC284475 (Accession XP_211478.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284475.

[45899] LOC284486 (Accession XP_209231.1) is another GAM3298 target gene, herein designated TARGET GENE.

LOC284486 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284486, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284486 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45900] Another function of GAM3298 is therefore inhibition of LOC284486 (Accession XP_209231.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284486.

[45901] LOC284542 (Accession XP_209254.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC284542 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284542, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284542 BINDING SITE, designated SEQ ID:12376, to the nucleotide sequence of

GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45902] Another function of GAM3298 is therefore inhibition of LOC284542 (Accession XP_209254.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284542.

[45903] LOC284552 (Accession XP_211516.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC284552 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284552, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284552 BINDING SITE, designated SEQ ID:1017, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45904] Another function of GAM3298 is therefore inhibition of LOC284552 (Accession XP_211516.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284552.

[45905] LOC284639 (Accession XP_211567.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC284639 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284639, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284639 BINDING SITE, designated SEQ ID:3703, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45906] Another function of GAM3298 is therefore inhibition of LOC284639 (Accession XP_211567.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284639.

[45907] LOC284647 (Accession XP_211569.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC284647 BINDING SITE1 and LOC284647 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284647, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the com-

plementarity of the nucleotide sequences of LOC284647 BINDING SITE1 and LOC284647 BINDING SITE2, designated SEQ ID:10343 and SEQ ID:15701 respectively, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45908] Another function of GAM3298 is therefore inhibition of LOC284647 (Accession XP_211569.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284647.

[45909] LOC284665 (Accession XP_211581.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC284665 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284665, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284665 BINDING SITE, designated SEQ ID:7468, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45910] Another function of GAM3298 is therefore inhibition of LOC284665 (Accession XP_211581.1) . Accordingly, utili-

ties of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284665.

[45911] LOC284707 (Accession XP_211598.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC284707 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284707, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284707 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45912] Another function of GAM3298 is therefore inhibition of LOC284707 (Accession XP_211598.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284707.

[45913] LOC284739 (Accession XP_211609.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC284739 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

LOC284739, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284739 BINDING SITE, designated SEQ ID:18406, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45914] Another function of GAM3298 is therefore inhibition of LOC284739 (Accession XP_211609.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284739.

[45915] LOC284857 (Accession XP_211671.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC284857 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284857, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284857 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45916] Another function of GAM3298 is therefore inhibition of LOC284857 (Accession XP_211671.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284857.

[45917] LOC284858 (Accession XP_209386.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC284858 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284858, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284858 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45918] Another function of GAM3298 is therefore inhibition of LOC284858 (Accession XP_209386.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284858.

[45919] LOC284911 (Accession XP_211684.1) is another GAM3298 target gene, herein designated TARGET GENE.

LOC284911 BINDING SITE1 and LOC284911 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284911, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284911 BINDING SITE1 and LOC284911 BINDING SITE2, designated SEQ ID:3706 and SEQ ID:12485 respectively, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45920] Another function of GAM3298 is therefore inhibition of LOC284911 (Accession XP_211684.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284911.

[45921] LOC284912 (Accession XP_209413.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC284912 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284912, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284912 BINDING SITE, desig-

nated SEQ ID:5498, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45922] Another function of GAM3298 is therefore inhibition of LOC284912 (Accession XP_209413.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284912.

[45923] LOC284972 (Accession XP_211712.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC284972 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284972, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284972 BINDING SITE, designated SEQ ID:13200, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45924] Another function of GAM3298 is therefore inhibition of LOC284972 (Accession XP_211712.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC284972.

[45925] LOC284995 (Accession XP_211729.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC284995 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284995, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284995 BINDING SITE, designated SEQ ID:17671, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45926] Another function of GAM3298 is therefore inhibition of LOC284995 (Accession XP_211729.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284995.

[45927] LOC284998 (Accession XP_211726.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC284998 BINDING SITE1 and LOC284998 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284998, corresponding to target binding sites such as BINDING SITE I, BINDING SITE

II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284998 BINDING SITE1 and LOC284998 BINDING SITE2, designated SEQ ID:14399 and SEQ ID:13613 respectively, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45928] Another function of GAM3298 is therefore inhibition of LOC284998 (Accession XP_211726.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284998.

[45929] LOC285001 (Accession XP_211730.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC285001 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285001, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285001 BINDING SITE, designated SEQ ID:16577, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45930] Another function of GAM3298 is therefore inhibition of

LOC285001 (Accession XP_211730.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285001.

[45931] LOC285052 (Accession XP_211751.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC285052 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285052, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285052 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45932] Another function of GAM3298 is therefore inhibition of LOC285052 (Accession XP_211751.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285052.

[45933] LOC285082 (Accession XP_211759.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC285082 BINDING SITE is a target binding site found in

the 3` untranslated region of mRNA encoded by LOC285082, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285082 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45934] Another function of GAM3298 is therefore inhibition of LOC285082 (Accession XP_211759.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285082.

[45935] LOC285376 (Accession XP_211864.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC285376 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285376, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285376 BINDING SITE, designated SEQ ID:4250, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:259.

[45936] Another function of GAM3298 is therefore inhibition of LOC285376 (Accession XP_211864.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285376.

[45937] LOC285378 (Accession XP_211859.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC285378 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285378, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285378 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45938] Another function of GAM3298 is therefore inhibition of LOC285378 (Accession XP_211859.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285378.

[45939] LOC285379 (Accession XP_211868.1) is another

GAM3298 target gene, herein designated TARGET GENE. LOC285379 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285379, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285379 BINDING SITE, designated SEQ ID:12631, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45940] Another function of GAM3298 is therefore inhibition of LOC285379 (Accession XP_211868.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285379.

[45941] LOC285398 (Accession XP_209593.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC285398 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285398, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285398 BINDING SITE, desig-

nated SEQ ID:18417, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45942] Another function of GAM3298 is therefore inhibition of LOC285398 (Accession XP_209593.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285398.

[45943] LOC285400 (Accession XP_209596.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC285400 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285400, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285400 BINDING SITE, designated SEQ ID:19239, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45944] Another function of GAM3298 is therefore inhibition of LOC285400 (Accession XP_209596.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC285400.

[45945] LOC285540 (Accession XP_209654.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC285540 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285540, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285540 BINDING SITE, designated SEQ ID:4958, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45946] Another function of GAM3298 is therefore inhibition of LOC285540 (Accession XP_209654.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285540.

[45947] LOC285676 (Accession XP_209718.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC285676 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285676, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285676 BINDING SITE, designated SEQ ID:2225, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45948] Another function of GAM3298 is therefore inhibition of LOC285676 (Accession XP_209718.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285676.

[45949] LOC285719 (Accession XP_211990.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC285719 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285719, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285719 BINDING SITE, designated SEQ ID:840, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45950] Another function of GAM3298 is therefore inhibition of LOC285719 (Accession XP_211990.1) . Accordingly, utili-

ties of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285719.

[45951] LOC285722 (Accession XP_211997.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC285722 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285722, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285722 BINDING SITE, designated SEQ ID:14868, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45952] Another function of GAM3298 is therefore inhibition of LOC285722 (Accession XP_211997.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285722.

[45953] LOC285747 (Accession XP_209742.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC285747 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

LOC285747, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285747 BINDING SITE, designated SEQ ID:17940, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45954] Another function of GAM3298 is therefore inhibition of LOC285747 (Accession XP_209742.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285747.

[45955] LOC285749 (Accession XP_212010.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC285749 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285749, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285749 BINDING SITE, designated SEQ ID:10387, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45956] Another function of GAM3298 is therefore inhibition of LOC285749 (Accession XP_212010.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285749.

[45957] LOC285758 (Accession XP_212012.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC285758 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285758, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285758 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45958] Another function of GAM3298 is therefore inhibition of LOC285758 (Accession XP_212012.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285758.

[45959] LOC285833 (Accession XP_209790.1) is another GAM3298 target gene, herein designated TARGET GENE.

LOC285833 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285833, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285833 BINDING SITE, designated SEQ ID:19337, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45960] Another function of GAM3298 is therefore inhibition of LOC285833 (Accession XP_209790.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285833.

[45961] LOC285854 (Accession XP_209770.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC285854 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285854, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285854 BINDING SITE, designated SEQ ID:5474, to the nucleotide sequence of

GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45962] Another function of GAM3298 is therefore inhibition of LOC285854 (Accession XP_209770.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285854.

[45963] LOC285859 (Accession XP_209775.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC285859 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285859, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285859 BINDING SITE, designated SEQ ID:17309, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45964] Another function of GAM3298 is therefore inhibition of LOC285859 (Accession XP_209775.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285859.

[45965] LOC285869 (Accession XP_212058.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC285869 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285869, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285869 BINDING SITE, designated SEQ ID:18034, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45966] Another function of GAM3298 is therefore inhibition of LOC285869 (Accession XP_212058.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285869.

[45967] LOC285912 (Accession XP_212078.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC285912 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285912, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC285912 BINDING SITE, designated SEQ ID:816, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45968] Another function of GAM3298 is therefore inhibition of LOC285912 (Accession XP_212078.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285912.

[45969] LOC285920 (Accession XP_212091.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC285920 BINDING SITE1 and LOC285920 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285920, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285920 BINDING SITE1 and LOC285920 BINDING SITE2, designated SEQ ID:15927 and SEQ ID:3706 respectively, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45970] Another function of GAM3298 is therefore inhibition of LOC285920 (Accession XP_212091.1) . Accordingly, utili-

ties of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285920.

[45971] LOC285926 (Accession XP_208368.2) is another GAM3298 target gene, herein designated TARGET GENE. LOC285926 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285926, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285926 BINDING SITE, designated SEQ ID:11962, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45972] Another function of GAM3298 is therefore inhibition of LOC285926 (Accession XP_208368.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285926.

[45973] LOC285928 (Accession XP_212087.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC285928 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

LOC285928, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285928 BINDING SITE, designated SEQ ID:16949, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45974] Another function of GAM3298 is therefore inhibition of LOC285928 (Accession XP_212087.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285928.

[45975] LOC285953 (Accession XP_209820.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC285953 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285953, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285953 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45976] Another function of GAM3298 is therefore inhibition of LOC285953 (Accession XP_209820.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285953.

[45977] LOC285960 (Accession XP_212088.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC285960 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285960, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285960 BINDING SITE, designated SEQ ID:14995, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45978] Another function of GAM3298 is therefore inhibition of LOC285960 (Accession XP_212088.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285960.

[45979] LOC286129 (Accession XP_209910.2) is another GAM3298 target gene, herein designated TARGET GENE.

LOC286129 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286129, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286129 BINDING SITE, designated SEQ ID:7202, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45980] Another function of GAM3298 is therefore inhibition of LOC286129 (Accession XP_209910.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286129.

[45981] LOC286166 (Accession XP_209925.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC286166 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286166, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286166 BINDING SITE, designated SEQ ID:7939, to the nucleotide sequence of

GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45982] Another function of GAM3298 is therefore inhibition of LOC286166 (Accession XP_209925.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286166.

[45983] LOC286184 (Accession XP_212216.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC286184 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286184, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286184 BINDING SITE, designated SEQ ID:3702, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45984] Another function of GAM3298 is therefore inhibition of LOC286184 (Accession XP_212216.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286184.

[45985] LOC286186 (Accession XP_212219.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC286186 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286186, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286186 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45986] Another function of GAM3298 is therefore inhibition of LOC286186 (Accession XP_212219.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286186.

[45987] LOC286197 (Accession XP_209940.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC286197 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286197, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC286197 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45988] Another function of GAM3298 is therefore inhibition of LOC286197 (Accession XP_209940.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286197.

[45989] LOC286222 (Accession XP_209955.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC286222 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286222, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286222 BINDING SITE, designated SEQ ID:14873, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45990] Another function of GAM3298 is therefore inhibition of LOC286222 (Accession XP_209955.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC286222.

[45991] LOC286337 (Accession XP_212274.3) is another GAM3298 target gene, herein designated TARGET GENE. LOC286337 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286337, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286337 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45992] Another function of GAM3298 is therefore inhibition of LOC286337 (Accession XP_212274.3) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286337.

[45993] LOC286374 (Accession XP_212293.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC286374 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286374, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286374 BINDING SITE, designated SEQ ID:10184, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45994] Another function of GAM3298 is therefore inhibition of LOC286374 (Accession XP_212293.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286374.

[45995] LOC286470 (Accession XP_212325.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC286470 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286470, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286470 BINDING SITE, designated SEQ ID:7468, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45996] Another function of GAM3298 is therefore inhibition of

LOC286470 (Accession XP_212325.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286470.

[45997] LOC338549 (Accession XP_294651.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC338549 BINDING SITE1 and LOC338549 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC338549, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338549 BINDING SITE1 and LOC338549 BINDING SITE2, designated SEQ ID:8366 and SEQ ID:5498 respectively, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[45998] Another function of GAM3298 is therefore inhibition of LOC338549 (Accession XP_294651.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338549.

[45999] LOC338594 (Accession XP_294660.1) is another GAM3298 target gene, herein designated TARGET GENE.

LOC338594 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338594, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338594 BINDING SITE, designated SEQ ID:5843, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46000] Another function of GAM3298 is therefore inhibition of LOC338594 (Accession XP_294660.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338594.

[46001] LOC338963 (Accession XP_294757.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC338963 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC338963, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338963 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of

GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46002] Another function of GAM3298 is therefore inhibition of LOC338963 (Accession XP_294757.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338963.

[46003] LOC339290 (Accession XP_294901.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC339290 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339290, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339290 BINDING SITE, designated SEQ ID:13707, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46004] Another function of GAM3298 is therefore inhibition of LOC339290 (Accession XP_294901.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339290.

[46005] LOC339373 (Accession XP_294921.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC339373 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339373, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339373 BINDING SITE, designated SEQ ID:815, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46006] Another function of GAM3298 is therefore inhibition of LOC339373 (Accession XP_294921.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339373.

[46007] LOC339413 (Accession XP_294936.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC339413 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339413, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC339413 BINDING SITE, designated SEQ ID:19562, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46008] Another function of GAM3298 is therefore inhibition of LOC339413 (Accession XP_294936.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339413.

[46009] LOC339761 (Accession XP_291005.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC339761 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339761, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339761 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46010] Another function of GAM3298 is therefore inhibition of LOC339761 (Accession XP_291005.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC339761.

[46011] LOC339841 (Accession XP_291038.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC339841 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339841, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339841 BINDING SITE, designated SEQ ID:7576, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46012] Another function of GAM3298 is therefore inhibition of LOC339841 (Accession XP_291038.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339841.

[46013] LOC340038 (Accession XP_291125.2) is another GAM3298 target gene, herein designated TARGET GENE. LOC340038 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340038, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340038 BINDING SITE, designated SEQ ID:19238, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46014] Another function of GAM3298 is therefore inhibition of LOC340038 (Accession XP_291125.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340038.

[46015] LOC340087 (Accession XP_295153.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC340087 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340087, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340087 BINDING SITE, designated SEQ ID:16347, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46016] Another function of GAM3298 is therefore inhibition of

LOC340087 (Accession XP_295153.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340087.

[46017] LOC340184 (Accession XP_295183.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC340184 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340184, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340184 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46018] Another function of GAM3298 is therefore inhibition of LOC340184 (Accession XP_295183.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340184.

[46019] LOC340208 (Accession XP_295187.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC340208 BINDING SITE is a target binding site found in

the 5` untranslated region of mRNA encoded by LOC340208, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340208 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46020] Another function of GAM3298 is therefore inhibition of LOC340208 (Accession XP_295187.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340208.

[46021] LOC340269 (Accession XP_295199.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC340269 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC340269, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340269 BINDING SITE, designated SEQ ID:16625, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:259.

[46022] Another function of GAM3298 is therefore inhibition of LOC340269 (Accession XP_295199.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340269.

[46023] LOC340320 (Accession XP_295211.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC340320 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340320, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340320 BINDING SITE, designated SEQ ID:4826, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46024] Another function of GAM3298 is therefore inhibition of LOC340320 (Accession XP_295211.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340320.

[46025] LOC340362 (Accession XP_295225.1) is another

GAM3298 target gene, herein designated TARGET GENE. LOC340362 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340362, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340362 BINDING SITE, designated SEQ ID:8160, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46026] Another function of GAM3298 is therefore inhibition of LOC340362 (Accession XP_295225.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340362.

[46027] LOC340394 (Accession XP_295235.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC340394 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340394, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340394 BINDING SITE, desig-

nated SEQ ID:15241, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46028] Another function of GAM3298 is therefore inhibition of LOC340394 (Accession XP_295235.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340394.

[46029] LOC340547 (Accession XP_291331.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC340547 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340547, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340547 BINDING SITE, designated SEQ ID:1347, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46030] Another function of GAM3298 is therefore inhibition of LOC340547 (Accession XP_291331.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC340547.

[46031] LOC343434 (Accession XP_295562.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC343434 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC343434, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC343434 BINDING SITE, designated SEQ ID:5570, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46032] Another function of GAM3298 is therefore inhibition of LOC343434 (Accession XP_295562.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC343434.

[46033] LOC346232 (Accession XP_294131.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC346232 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC346232, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC346232 BINDING SITE, designated SEQ ID:18321, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46034] Another function of GAM3298 is therefore inhibition of LOC346232 (Accession XP_294131.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC346232.

[46035] LOC348102 (Accession XP_302651.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC348102 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348102, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348102 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46036] Another function of GAM3298 is therefore inhibition of LOC348102 (Accession XP_302651.1) . Accordingly, utili-

ties of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348102.

[46037] LOC348442 (Accession XP_057659.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC348442 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348442, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348442 BINDING SITE, designated SEQ ID:815, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46038] Another function of GAM3298 is therefore inhibition of LOC348442 (Accession XP_057659.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348442.

[46039] LOC348456 (Accession XP_302761.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC348456 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

LOC348456, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348456 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46040] Another function of GAM3298 is therefore inhibition of LOC348456 (Accession XP_302761.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348456.

[46041] LOC348527 (Accession XP_300779.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC348527 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348527, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348527 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46042] Another function of GAM3298 is therefore inhibition of LOC348527 (Accession XP_300779.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348527.

[46043] LOC348738 (Accession XP_300826.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC348738 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348738, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348738 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46044] Another function of GAM3298 is therefore inhibition of LOC348738 (Accession XP_300826.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348738.

[46045] LOC349063 (Accession XP_302949.1) is another GAM3298 target gene, herein designated TARGET GENE.

LOC349063 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC349063, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349063 BINDING SITE, designated SEQ ID:18034, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46046] Another function of GAM3298 is therefore inhibition of LOC349063 (Accession XP_302949.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349063.

[46047] LOC349092 (Accession XP_302959.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC349092 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC349092, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349092 BINDING SITE, designated SEQ ID:16691, to the nucleotide sequence of

GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46048] Another function of GAM3298 is therefore inhibition of LOC349092 (Accession XP_302959.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349092.

[46049] LOC349169 (Accession XP_302978.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC349169 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC349169, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349169 BINDING SITE, designated SEQ ID:17395, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46050] Another function of GAM3298 is therefore inhibition of LOC349169 (Accession XP_302978.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349169.

[46051] LOC349170 (Accession XP_300969.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC349170 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC349170, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349170 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46052] Another function of GAM3298 is therefore inhibition of LOC349170 (Accession XP_300969.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349170.

[46053] LOC349282 (Accession XP_301008.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC349282 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC349282, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC349282 BINDING SITE, designated SEQ ID:19238, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46054] Another function of GAM3298 is therefore inhibition of LOC349282 (Accession XP_301008.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349282.

[46055] LOC349313 (Accession XP_301024.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC349313 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC349313, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349313 BINDING SITE, designated SEQ ID:19238, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46056] Another function of GAM3298 is therefore inhibition of LOC349313 (Accession XP_301024.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC349313.

[46057] LOC349323 (Accession XP_301029.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC349323 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC349323, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349323 BINDING SITE, designated SEQ ID:18956, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46058] Another function of GAM3298 is therefore inhibition of LOC349323 (Accession XP_301029.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349323.

[46059] LOC51333 (Accession NP_057727.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC51333 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC51333, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC51333 BINDING SITE, designated SEQ ID:17893, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46060] Another function of GAM3298 is therefore inhibition of LOC51333 (Accession NP_057727.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51333.

[46061] LOC51759 (Accession NP_057566.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC51759 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LOC51759, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC51759 BINDING SITE, designated SEQ ID:4777, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46062] Another function of GAM3298 is therefore inhibition of LOC51759 (Accession NP_057566.1) . Accordingly, utili-

ties of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51759.

[46063] LOC85865 (Accession NP_149098.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC85865 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC85865, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC85865 BINDING SITE, designated SEQ ID:6826, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46064] Another function of GAM3298 is therefore inhibition of LOC85865 (Accession NP_149098.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC85865.

[46065] LOC91056 (Accession NP_612377.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC91056 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LOC91056, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC91056 BINDING SITE, designated SEQ ID:12246, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46066] Another function of GAM3298 is therefore inhibition of LOC91056 (Accession NP_612377.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91056.

[46067] LOC91565 (Accession XP_039231.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC91565 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC91565, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC91565 BINDING SITE, designated SEQ ID:6049, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46068] Another function of GAM3298 is therefore inhibition of LOC91565 (Accession XP_039231.1) . Accordingly, utili-

ties of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91565.

[46069] LOC93613 (Accession XP_052568.1) is another GAM3298 target gene, herein designated TARGET GENE. LOC93613 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC93613, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC93613 BINDING SITE, designated SEQ ID:10184, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46070] Another function of GAM3298 is therefore inhibition of LOC93613 (Accession XP_052568.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC93613.

[46071] LPHN3 (Accession NP_056051.1) is another GAM3298 target gene, herein designated TARGET GENE. LPHN3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LPHN3, corresponding to a target binding site such as BINDING SITE I, BINDING

SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LPHN3 BINDING SITE, designated SEQ ID:3875, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46072] Another function of GAM3298 is therefore inhibition of LPHN3 (Accession NP_056051.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LPHN3.

[46073] Mitogen-activated protein kinase kinase kinase 8 (MAP3K8, Accession NP_005195.2) is another GAM3298 target gene, herein designated TARGET GENE. MAP3K8 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MAP3K8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAP3K8 BINDING SITE, designated SEQ ID:11824, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46074] Another function of GAM3298 is therefore inhibition of Mitogen-activated protein kinase kinase kinase 8 (MAP3K8, Accession NP_005195.2), a gene which is able

to activate nf- kappa- b 1 by stimulating proteasome-mediated p. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAP3K8.

[46075] The function of MAP3K8 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.1.Matrin 3 (MATR3, Accession NP_061322.2) is another GAM3298 target gene, herein designated TARGET GENE. MATR3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MATR3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MATR3 BINDING SITE, designated SEQ ID:19562, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46076] Another function of GAM3298 is therefore inhibition of Matrin 3 (MATR3, Accession NP_061322.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MATR3.

[46077] MAWBP (Accession NP_071412.1) is another GAM3298 target gene, herein designated TARGET GENE. MAWBP BINDING SITE1 and MAWBP BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MAWBP, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAWBP BINDING SITE1 and MAWBP BINDING SITE2, designated SEQ ID:4940 and SEQ ID:15240 respectively, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46078] Another function of GAM3298 is therefore inhibition of MAWBP (Accession NP_071412.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAWBP.

[46079] Methionyl aminopeptidase 1 (METAP1, Accession NP_055958.1) is another GAM3298 target gene, herein designated TARGET GENE. METAP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by METAP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of METAP1 BINDING SITE, designated SEQ ID:12453, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46080] Another function of GAM3298 is therefore inhibition of Methionyl aminopeptidase 1 (METAP1, Accession NP_055958.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with METAP1.

[46081] Mannosyl (beta-1,4-)-glycoprotein beta-1,4-n-acetylglucosaminyltransferase (MGAT3, Accession NP_835470.1) is another GAM3298 target gene, herein designated TARGET GENE. MGAT3 BINDING SITE1 and MGAT3 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by MGAT3, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGAT3 BINDING SITE1 and MGAT3 BINDING SITE2, designated SEQ ID:16776 and SEQ ID:16780 respectively, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46082] Another function of GAM3298 is therefore inhibition of Mannosyl (beta-1,4-)-glycoprotein beta-1,4-n-acetylglucosaminyltransferase (MGAT3, Accession NP_835470.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGAT3.

[46083] MGC10765 (Accession NP_077321.1) is another GAM3298 target gene, herein designated TARGET GENE. MGC10765 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC10765, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC10765 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46084] Another function of GAM3298 is therefore inhibition of MGC10765 (Accession NP_077321.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC10765.

[46085] MGC10771 (Accession NP_078782.2) is another GAM3298 target gene, herein designated TARGET GENE. MGC10771

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC10771, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC10771 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46086] Another function of GAM3298 is therefore inhibition of MGC10771 (Accession NP_078782.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC10771.

[46087] MGC10814 (Accession NP_116060.1) is another GAM3298 target gene, herein designated TARGET GENE. MGC10814 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC10814, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC10814 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46088] Another function of GAM3298 is therefore inhibition of MGC10814 (Accession NP_116060.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC10814.

[46089] MGC13053 (Accession NP_116099.1) is another GAM3298 target gene, herein designated TARGET GENE. MGC13053 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC13053, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC13053 BINDING SITE, designated SEQ ID:11709, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46090] Another function of GAM3298 is therefore inhibition of MGC13053 (Accession NP_116099.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC13053.

[46091] MGC16703 (Accession NP_659479.1) is another GAM3298 target gene, herein designated TARGET GENE. MGC16703 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by MGC16703, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC16703 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46092] Another function of GAM3298 is therefore inhibition of MGC16703 (Accession NP_659479.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC16703.

[46093] MGC17791 (Accession NP_689575.1) is another GAM3298 target gene, herein designated TARGET GENE. MGC17791 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC17791, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC17791 BINDING SITE, designated SEQ ID:15278, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46094] Another function of GAM3298 is therefore inhibition of

MGC17791 (Accession NP_689575.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC17791.

[46095] MGC17986 (Accession NP_705836.1) is another GAM3298 target gene, herein designated TARGET GENE. MGC17986 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC17986, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC17986 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46096] Another function of GAM3298 is therefore inhibition of MGC17986 (Accession NP_705836.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC17986.

[46097] MGC2396 (Accession NP_443084.1) is another GAM3298 target gene, herein designated TARGET GENE. MGC2396 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC2396, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC2396 BINDING SITE, designated SEQ ID:6794, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46098] Another function of GAM3298 is therefore inhibition of MGC2396 (Accession NP_443084.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC2396.

[46099] MGC29937 (Accession NP_653198.1) is another GAM3298 target gene, herein designated TARGET GENE. MGC29937 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC29937, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC29937 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46100] Another function of GAM3298 is therefore inhibition of MGC29937 (Accession NP_653198.1) . Accordingly, utili-

ties of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC29937.

[46101] MGC30052 (Accession NP_653322.1) is another GAM3298 target gene, herein designated TARGET GENE. MGC30052 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC30052, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC30052 BINDING SITE, designated SEQ ID:6970, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46102] Another function of GAM3298 is therefore inhibition of MGC30052 (Accession NP_653322.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC30052.

[46103] MGC3195 (Accession NP_114111.2) is another GAM3298 target gene, herein designated TARGET GENE. MGC3195 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC3195, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC3195 BINDING SITE, designated SEQ ID:7576, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46104] Another function of GAM3298 is therefore inhibition of MGC3195 (Accession NP_114111.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC3195.

[46105] MGC3207 (Accession NP_115661.1) is another GAM3298 target gene, herein designated TARGET GENE. MGC3207 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC3207, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC3207 BINDING SITE, designated SEQ ID:6665, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46106] Another function of GAM3298 is therefore inhibition of MGC3207 (Accession NP_115661.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with MGC3207.

[46107] MGC34034 (Accession NP_694956.1) is another GAM3298 target gene, herein designated TARGET GENE. MGC34034 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC34034, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC34034 BINDING SITE, designated SEQ ID:17939, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46108] Another function of GAM3298 is therefore inhibition of MGC34034 (Accession NP_694956.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC34034.

[46109] MGC50836 (Accession XP_171060.1) is another GAM3298 target gene, herein designated TARGET GENE. MGC50836 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC50836, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of MGC50836 BINDING SITE, designated SEQ ID:17939, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46110] Another function of GAM3298 is therefore inhibition of MGC50836 (Accession XP_171060.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC50836.

[46111] MGC5384 (Accession NP_112234.1) is another GAM3298 target gene, herein designated TARGET GENE. MGC5384 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC5384, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC5384 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46112] Another function of GAM3298 is therefore inhibition of MGC5384 (Accession NP_112234.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

MGC5384.

[46113] Mhc class i polypeptide-related sequence a (MICA, Accession NP_000238.1) is another GAM3298 target gene, herein designated TARGET GENE. MICA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MICA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MICA BINDING SITE, designated SEQ ID:15857, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46114] Another function of GAM3298 is therefore inhibition of Mhc class i polypeptide-related sequence a (MICA, Accession NP_000238.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MICA.

[46115] MONDOA (Accession NP_055753.1) is another GAM3298 target gene, herein designated TARGET GENE. MONDOA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MONDOA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of MONDOA BINDING SITE, designated SEQ ID:16680, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46116] Another function of GAM3298 is therefore inhibition of MONDOA (Accession NP_055753.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MONDOA.

[46117] MPRG (Accession NP_060175.2) is another GAM3298 target gene, herein designated TARGET GENE. MPRG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MPRG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MPRG BINDING SITE, designated SEQ ID:17939, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46118] Another function of GAM3298 is therefore inhibition of MPRG (Accession NP_060175.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MPRG.

[46119] Mre11 meiotic recombination 11 homolog a (s. cerevisiae) (MRE11A, Accession NP_005582.1) is another GAM3298 target gene, herein designated TARGET GENE. MRE11A BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MRE11A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRE11A BINDING SITE, designated SEQ ID:9057, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46120] Another function of GAM3298 is therefore inhibition of Mre11 meiotic recombination 11 homolog a (s. cerevisiae) (MRE11A, Accession NP_005582.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRE11A.

[46121] Mre11 meiotic recombination 11 homolog a (s. cerevisiae) (MRE11A, Accession NP_005581.2) is another GAM3298 target gene, herein designated TARGET GENE. MRE11A BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded

by MRE11A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRE11A BINDING SITE, designated SEQ ID:9057, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46122] Another function of GAM3298 is therefore inhibition of Mre11 meiotic recombination 11 homolog a (s. cerevisiae) (MRE11A, Accession NP_005581.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRE11A.

[46123] Mitochondrial ribosomal protein s18b (MRPS18B, Accession NP_054765.1) is another GAM3298 target gene, herein designated TARGET GENE. MRPS18B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MRPS18B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRPS18B BINDING SITE, designated SEQ ID:5843, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA,

also designated SEQ ID:259.

[46124] Another function of GAM3298 is therefore inhibition of Mitochondrial ribosomal protein s18b (MRPS18B, Accession NP_054765.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPS18B.

[46125] Muts homolog 3 (e. coli) (MSH3, Accession NP_002430.1) is another GAM3298 target gene, herein designated TARGET GENE. MSH3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MSH3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MSH3 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46126] Another function of GAM3298 is therefore inhibition of Muts homolog 3 (e. coli) (MSH3, Accession NP_002430.1), a gene which belongs to the dna mismatch repair muts family. and therefore may be associated with Hereditary nonpolyposis colorectal cancer. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of Hereditary nonpolyposis colorectal cancer, and of other

diseases and clinical conditions associated with MSH3.

[46127] The function of MSH3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.1.Major vault protein (MVP, Accession NP_059447.2) is another GAM3298 target gene, herein designated TARGET GENE. MVP BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MVP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MVP BINDING SITE, designated SEQ ID:6247, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46128] Another function of GAM3298 is therefore inhibition of Major vault protein (MVP, Accession NP_059447.2), a gene which may be involved in nucleo- cytoplasmic transport. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MVP.

[46129] The function of MVP and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM1674.1.NBR2 (Accession NP_005812.1) is another GAM3298 target gene, herein designated TARGET GENE. NBR2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NBR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NBR2 BINDING SITE, designated SEQ ID:17309, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46130] Another function of GAM3298 is therefore inhibition of NBR2 (Accession NP_005812.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NBR2.

[46131] Nuclear receptor coactivator 3 (NCOA3, Accession NP_006525.1) is another GAM3298 target gene, herein designated TARGET GENE. NCOA3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NCOA3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NCOA3 BINDING SITE, desig-

nated SEQ ID:13706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46132] Another function of GAM3298 is therefore inhibition of Nuclear receptor coactivator 3 (NCOA3, Accession NP_006525.1), a gene which directly binds nuclear receptors and stimulates the transcriptional activities in hormone- dependent fashion. and therefore may be associated with Steroid- dependent cancers. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of Steroid- dependent cancers., and of other diseases and clinical conditions associated with NCOA3.

[46133] The function of NCOA3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM385.2.NDP52 (Accession NP_005822.1) is another GAM3298 target gene, herein designated TARGET GENE. NDP52 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NDP52, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NDP52 BINDING SITE, designated SEQ ID:2868, to the

nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46134] Another function of GAM3298 is therefore inhibition of NDP52 (Accession NP_005822.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NDP52.

[46135] Nadh dehydrogenase (ubiquinone) 1, subcomplex unknown, 2, 14.5kda (NDUFC2, Accession NP_004540.1) is another GAM3298 target gene, herein designated TARGET GENE. NDUFC2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NDUFC2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NDUFC2 BINDING SITE, designated SEQ ID:12246, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46136] Another function of GAM3298 is therefore inhibition of Nadh dehydrogenase (ubiquinone) 1, subcomplex unknown, 2, 14.5kda (NDUFC2, Accession NP_004540.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions

associated with NDUFC2.

[46137] Neural precursor cell expressed, developmentally down-regulated 4-like (NEDD4L, Accession NP_056092.2) is another GAM3298 target gene, herein designated TARGET GENE. NEDD4L BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NEDD4L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NEDD4L BINDING SITE, designated SEQ ID:12224, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46138] Another function of GAM3298 is therefore inhibition of Neural precursor cell expressed, developmentally down-regulated 4-like (NEDD4L, Accession NP_056092.2), a gene which may play a role in the regulation of epithelial sodium channel function. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NEDD4L.

[46139] The function of NEDD4L and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM499.2.Nuclear factor of activated t-cells 5, tonicity-responsive (NFAT5, Accession NP_775322.1) is another GAM3298 target gene, herein designated TARGET GENE. NFAT5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by NFAT5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NFAT5 BINDING SITE, designated SEQ ID:12246, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46140] Another function of GAM3298 is therefore inhibition of Nuclear factor of activated t-cells 5, tonicity-responsive (NFAT5, Accession NP_775322.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NFAT5.

[46141] Natural killer-tumor recognition sequence (NKTR, Accession NP_005376.2) is another GAM3298 target gene, herein designated TARGET GENE. NKTR BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NKTR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BIND-

ING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NKTR BINDING SITE, designated SEQ ID:14143, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46142] Another function of GAM3298 is therefore inhibition of Natural killer-tumor recognition sequence (NKTR, Accession NP_005376.2), a gene which is involved in the function of nk cells. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NKTR.

[46143] The function of NKTR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM467.2.NMA (Accession NP_036474.1) is another GAM3298 target gene, herein designated TARGET GENE. NMA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NMA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NMA BINDING SITE, designated SEQ ID:12002, to the nucleotide sequence of GAM3298 RNA, herein designated

GAM RNA, also designated SEQ ID:259.

[46144] Another function of GAM3298 is therefore inhibition of NMA (Accession NP_036474.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NMA.

[46145] ODAG (Accession NP_066990.2) is another GAM3298 target gene, herein designated TARGET GENE. ODAG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ODAG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ODAG BINDING SITE, designated SEQ ID:13789, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46146] Another function of GAM3298 is therefore inhibition of ODAG (Accession NP_066990.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ODAG.

[46147] Optineurin (OPTN, Accession NP_068815.2) is another GAM3298 target gene, herein designated TARGET GENE. OPTN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OPTN, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OPTN BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46148] Another function of GAM3298 is therefore inhibition of Optineurin (OPTN, Accession NP_068815.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OPTN.

[46149] Platelet-activating factor acetylhydrolase 2, 40kda (PAFAH2, Accession NP_000428.2) is another GAM3298 target gene, herein designated TARGET GENE. PAFAH2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PAFAH2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PAFAH2 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46150] Another function of GAM3298 is therefore inhibition of

Platelet-activating factor acetylhydrolase 2, 40kda (PAFAH2, Accession NP_000428.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PAFAH2.

[46151] PBXIP1 (Accession NP_065385.2) is another GAM3298 target gene, herein designated TARGET GENE. PBXIP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PBXIP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PBXIP1 BINDING SITE, designated SEQ ID:19722, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46152] Another function of GAM3298 is therefore inhibition of PBXIP1 (Accession NP_065385.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PBXIP1.

[46153] Protocadherin 11 y-linked (PCDH11Y, Accession NP_116753.1) is another GAM3298 target gene, herein designated TARGET GENE. PCDH11Y BINDING SITE is a target binding site found in the 3` untranslated region of

multiple transcripts of mRNA encoded by PCDH11Y, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDH11Y BINDING SITE, designated SEQ ID:815, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46154] Another function of GAM3298 is therefore inhibition of Protocadherin 11 y-linked (PCDH11Y, Accession NP_116753.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDH11Y.

[46155] Protocadherin 11 y-linked (PCDH11Y, Accession NP_116754.1) is another GAM3298 target gene, herein designated TARGET GENE. PCDH11Y BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PCDH11Y, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDH11Y BINDING SITE, designated SEQ ID:815, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46156] Another function of GAM3298 is therefore inhibition of Protocadherin 11 y-linked (PCDH11Y, Accession NP_116754.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDH11Y.

[46157] Protocadherin alpha 1 (PCDHA1, Accession NP_113599.1) is another GAM3298 target gene, herein designated TARGET GENE. PCDHA1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PCDHA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHA1 BINDING SITE, designated SEQ ID:12657, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46158] Another function of GAM3298 is therefore inhibition of Protocadherin alpha 1 (PCDHA1, Accession NP_113599.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHA1.

[46159] Protocadherin alpha 1 (PCDHA1, Accession NP_061723.1) is another GAM3298 target gene, herein designated TAR-

GET GENE. PCDHA1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PCDHA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHA1 BINDING SITE, designated SEQ ID:12657, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46160] Another function of GAM3298 is therefore inhibition of Protocadherin alpha 1 (PCDHA1, Accession NP_061723.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHA1.

[46161] Protocadherin alpha 10 (PCDHA10, Accession NP_061724.1) is another GAM3298 target gene, herein designated TARGET GENE. PCDHA10 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PCDHA10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHA10 BINDING SITE, designated SEQ ID:12657, to

the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46162] Another function of GAM3298 is therefore inhibition of Protocadherin alpha 10 (PCDHA10, Accession NP_061724.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHA10.

[46163] Protocadherin alpha 10 (PCDHA10, Accession NP_114066.1) is another GAM3298 target gene, herein designated TARGET GENE. PCDHA10 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PCDHA10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHA10 BINDING SITE, designated SEQ ID:12657, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46164] Another function of GAM3298 is therefore inhibition of Protocadherin alpha 10 (PCDHA10, Accession NP_114066.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHA10.

[46165] Protocadherin alpha 11 (PCDHA11, Accession NP_061725.1) is another GAM3298 target gene, herein designated TARGET GENE. PCDHA11 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PCDHA11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHA11 BINDING SITE, designated SEQ ID:12657, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46166] Another function of GAM3298 is therefore inhibition of Protocadherin alpha 11 (PCDHA11, Accession NP_061725.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHA11.

[46167] Protocadherin alpha 12 (PCDHA12, Accession NP_061726.1) is another GAM3298 target gene, herein designated TARGET GENE. PCDHA12 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PCDHA12, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of PCDHA12 BINDING SITE, designated SEQ ID:12657, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46168] Another function of GAM3298 is therefore inhibition of Protocadherin alpha 12 (PCDHA12, Accession NP_061726.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHA12.

[46169] Protocadherin alpha 13 (PCDHA13, Accession NP_061727.1) is another GAM3298 target gene, herein designated TARGET GENE. PCDHA13 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PCDHA13, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHA13 BINDING SITE, designated SEQ ID:12657, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46170] Another function of GAM3298 is therefore inhibition of Protocadherin alpha 13 (PCDHA13, Accession NP_061727.1) . Accordingly, utilities of GAM3298 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHA13.

[46171] Protocadherin alpha 2 (PCDHA2, Accession NP_061728.1) is another GAM3298 target gene, herein designated TARGET GENE. PCDHA2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PCDHA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHA2 BINDING SITE, designated SEQ ID:12657, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46172] Another function of GAM3298 is therefore inhibition of Protocadherin alpha 2 (PCDHA2, Accession NP_061728.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHA2.

[46173] Protocadherin alpha 3 (PCDHA3, Accession NP_061729.1) is another GAM3298 target gene, herein designated TARGET GENE. PCDHA3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PCDHA3, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHA3 BINDING SITE, designated SEQ ID:12657, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46174] Another function of GAM3298 is therefore inhibition of Protocadherin alpha 3 (PCDHA3, Accession NP_061729.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHA3.

[46175] Protocadherin alpha 4 (PCDHA4, Accession NP_061730.1) is another GAM3298 target gene, herein designated TARGET GENE. PCDHA4 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PCDHA4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHA4 BINDING SITE, designated SEQ ID:12657, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46176] Another function of GAM3298 is therefore inhibition of

Protocadherin alpha 4 (PCDHA4, Accession NP_061730.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHA4.

[46177] Protocadherin alpha 5 (PCDHA5, Accession NP_061731.1) is another GAM3298 target gene, herein designated TARGET GENE. PCDHA5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PCDHA5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHA5 BINDING SITE, designated SEQ ID:12657, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46178] Another function of GAM3298 is therefore inhibition of Protocadherin alpha 5 (PCDHA5, Accession NP_061731.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHA5.

[46179] Protocadherin alpha 6 (PCDHA6, Accession NP_061732.1) is another GAM3298 target gene, herein designated TARGET GENE. PCDHA6 BINDING SITE is a target binding site

found in the 3` untranslated region of multiple transcripts of mRNA encoded by PCDHA6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHA6 BINDING SITE, designated SEQ ID:12657, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46180] Another function of GAM3298 is therefore inhibition of Protocadherin alpha 6 (PCDHA6, Accession NP_061732.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHA6.

[46181] Protocadherin alpha 6 (PCDHA6, Accession NP_114037.1) is another GAM3298 target gene, herein designated TARGET GENE. PCDHA6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PCDHA6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHA6 BINDING SITE, designated SEQ ID:12657, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA,

also designated SEQ ID:259.

[46182] Another function of GAM3298 is therefore inhibition of Protocadherin alpha 6 (PCDHA6, Accession NP_114037.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHA6.

[46183] Protocadherin alpha 7 (PCDHA7, Accession NP_061733.1) is another GAM3298 target gene, herein designated TARGET GENE. PCDHA7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PCDHA7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHA7 BINDING SITE, designated SEQ ID:12657, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46184] Another function of GAM3298 is therefore inhibition of Protocadherin alpha 7 (PCDHA7, Accession NP_061733.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHA7.

[46185] Protocadherin alpha 8 (PCDHA8, Accession NP_061734.1)

is another GAM3298 target gene, herein designated TARGET GENE. PCDHA8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PCDHA8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHA8 BINDING SITE, designated SEQ ID:12657, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46186] Another function of GAM3298 is therefore inhibition of Protocadherin alpha 8 (PCDHA8, Accession NP_061734.1). Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHA8.

[46187] Protocadherin alpha 9 (PCDHA9, Accession NP_114063.1) is another GAM3298 target gene, herein designated TARGET GENE. PCDHA9 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PCDHA9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHA9 BIND-

ING SITE, designated SEQ ID:12657, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46188] Another function of GAM3298 is therefore inhibition of Protocadherin alpha 9 (PCDHA9, Accession NP_114063.1), a gene which is a calcium- dependent cell- adhesion protein. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHA9.

[46189] The function of PCDHA9 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Protocadherin alpha subfamily c, 1 (PCDHAC1, Accession NP_061721.2) is another GAM3298 target gene, herein designated TARGET GENE. PCDHAC1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PCDHAC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHAC1 BINDING SITE, designated SEQ ID:12657, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ

ID:259.

[46190] Another function of GAM3298 is therefore inhibition of Protocadherin alpha subfamily c, 1 (PCDHAC1, Accession NP_061721.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHAC1.

[46191] Protocadherin alpha subfamily c, 2 (PCDHAC2, Accession NP_061722.1) is another GAM3298 target gene, herein designated TARGET GENE. PCDHAC2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PCDHAC2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHAC2 BINDING SITE, designated SEQ ID:12657, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46192] Another function of GAM3298 is therefore inhibition of Protocadherin alpha subfamily c, 2 (PCDHAC2, Accession NP_061722.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHAC2.

[46193] PEX26 (Accession NP_060399.1) is another GAM3298 tar-

get gene, herein designated TARGET GENE. PEX26 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PEX26, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PEX26 BINDING SITE, designated SEQ ID:16060, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46194] Another function of GAM3298 is therefore inhibition of PEX26 (Accession NP_060399.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PEX26.

[46195] Phosphatidylinositol glycan, class m (PIGM, Accession NP_660150.1) is another GAM3298 target gene, herein designated TARGET GENE. PIGM BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PIGM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PIGM BINDING SITE, designated SEQ ID:1310, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ

ID:259.

[46196] Another function of GAM3298 is therefore inhibition of Phosphatidylinositol glycan, class m (PIGM, Accession NP_660150.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PIGM.

[46197] PIGO (Accession NP_116023.2) is another GAM3298 target gene, herein designated TARGET GENE. PIGO BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PIGO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PIGO BINDING SITE, designated SEQ ID:19803, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46198] Another function of GAM3298 is therefore inhibition of PIGO (Accession NP_116023.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PIGO.

[46199] PIGO (Accession NP_690577.1) is another GAM3298 target gene, herein designated TARGET GENE. PIGO BINDING SITE is a target binding site found in the 3` untranslated re-

gion of multiple transcripts of mRNA encoded by PIGO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PIGO BINDING SITE, designated SEQ ID:19803, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46200] Another function of GAM3298 is therefore inhibition of PIGO (Accession NP_690577.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PIGO.

[46201] Phosphoinositide-3-kinase, regulatory subunit, polypeptide 2 (p85 beta) (PIK3R2, Accession NP_005018.1) is another GAM3298 target gene, herein designated TARGET GENE. PIK3R2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PIK3R2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PIK3R2 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46202] Another function of GAM3298 is therefore inhibition of Phosphoinositide-3-kinase, regulatory subunit, polypeptide 2 (p85 beta) (PIK3R2, Accession NP_005018.1), a gene which acts as an adapter and is regulatory subunit (p85 beta) of phosphatidylinositol 3- kinase. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PIK3R2.

[46203] The function of PIK3R2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM439.1.Polycystic kidney and hepatic disease 1 (autosomal recessive) (PKHD1, Accession NP_619639.2) is another GAM3298 target gene, herein designated TARGET GENE. PKHD1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PKHD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PKHD1 BINDING SITE, designated SEQ ID:12090, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46204] Another function of GAM3298 is therefore inhibition of Polycystic kidney and hepatic disease 1 (autosomal recessive) (PKHD1, Accession NP_619639.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PKHD1.

[46205] Placenta-specific 1 (PLAC1, Accession NP_068568.1) is another GAM3298 target gene, herein designated TARGET GENE. PLAC1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLAC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PLAC1 BINDING SITE, designated SEQ ID:1845, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46206] Another function of GAM3298 is therefore inhibition of Placenta-specific 1 (PLAC1, Accession NP_068568.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PLAC1.

[46207] PNPLA1 (Accession NP_775947.1) is another GAM3298 target gene, herein designated TARGET GENE. PNPLA1

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PNPLA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PNPLA1 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46208] Another function of GAM3298 is therefore inhibition of PNPLA1 (Accession NP_775947.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PNPLA1.

[46209] Protein o-fucosyltransferase 1 (POFUT1, Accession NP_056167.1) is another GAM3298 target gene, herein designated TARGET GENE. POFUT1 BINDING SITE1 and POFUT1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by POFUT1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of POFUT1 BINDING SITE1 and POFUT1 BINDING SITE2, designated SEQ ID:8174 and SEQ ID:6456 respectively, to the nucleotide sequence of

GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46210] Another function of GAM3298 is therefore inhibition of Protein o-fucosyltransferase 1 (POFUT1, Accession NP_056167.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with POFUT1.

[46211] Polymerase (dna directed), eta (POLH, Accession NP_006493.1) is another GAM3298 target gene, herein designated TARGET GENE. POLH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by POLH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of POLH BINDING SITE, designated SEQ ID:11747, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46212] Another function of GAM3298 is therefore inhibition of Polymerase (dna directed), eta (POLH, Accession NP_006493.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with POLH.

[46213] PORIMIN (Accession NP_443164.1) is another GAM3298 target gene, herein designated TARGET GENE. PORIMIN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PORIMIN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PORIMIN BINDING SITE, designated SEQ ID:5738, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46214] Another function of GAM3298 is therefore inhibition of PORIMIN (Accession NP_443164.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PORIMIN.

[46215] Pyrophosphatase (inorganic) (PP, Accession NP_066952.1) is another GAM3298 target gene, herein designated TARGET GENE. PP BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PP BINDING SITE, designated SEQ ID:5885, to

the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46216] Another function of GAM3298 is therefore inhibition of Pyrophosphatase (inorganic) (PP, Accession NP_066952.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PP.

[46217] Protein phosphatase 1, regulatory (inhibitor) subunit 3b (PPP1R3B, Accession NP_078883.1) is another GAM3298 target gene, herein designated TARGET GENE. PPP1R3B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PPP1R3B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPP1R3B BINDING SITE, designated SEQ ID:19238, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46218] Another function of GAM3298 is therefore inhibition of Protein phosphatase 1, regulatory (inhibitor) subunit 3b (PPP1R3B, Accession NP_078883.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

PPP1R3B.

[46219] Protein phosphatase 6, catalytic subunit (PPP6C, Accession NP_002712.1) is another GAM3298 target gene, herein designated TARGET GENE. PPP6C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PPP6C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPP6C BINDING SITE, designated SEQ ID:17178, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46220] Another function of GAM3298 is therefore inhibition of Protein phosphatase 6, catalytic subunit (PPP6C, Accession NP_002712.1), a gene which is the catalytic subunit of protein phosphatase 6 which may function in cell cycle regulation. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPP6C.

[46221] The function of PPP6C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM287.2.Protein kinase, y-linked (PRKY, Accession

NP_002751.1) is another GAM3298 target gene, herein designated TARGET GENE. PRKY BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRKY, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRKY BINDING SITE, designated SEQ ID:9486, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46222] Another function of GAM3298 is therefore inhibition of Protein kinase, y-linked (PRKY, Accession NP_002751.1), a gene which is a putative protein kinase. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRKY.

[46223] The function of PRKY and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.PRO0478 (Accession NP_054848.1) is another GAM3298 target gene, herein designated TARGET GENE. PRO0478 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

PRO0478, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO0478 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46224] Another function of GAM3298 is therefore inhibition of PRO0478 (Accession NP_054848.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO0478.

[46225] PRO1496 (Accession NP_061073.1) is another GAM3298 target gene, herein designated TARGET GENE. PRO1496 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRO1496, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO1496 BINDING SITE, designated SEQ ID:16693, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46226] Another function of GAM3298 is therefore inhibition of

PRO1496 (Accession NP_061073.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO1496.

[46227] PRO1853 (Accession NP_061077.1) is another GAM3298 target gene, herein designated TARGET GENE. PRO1853 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PRO1853, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO1853 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46228] Another function of GAM3298 is therefore inhibition of PRO1853 (Accession NP_061077.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO1853.

[46229] PRO2859 (Accession NP_061013.1) is another GAM3298 target gene, herein designated TARGET GENE. PRO2859 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by PRO2859, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO2859 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46230] Another function of GAM3298 is therefore inhibition of PRO2859 (Accession NP_061013.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO2859.

[46231] PRO2949 (Accession NP_061014.1) is another GAM3298 target gene, herein designated TARGET GENE. PRO2949 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRO2949, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO2949 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46232] Another function of GAM3298 is therefore inhibition of

PRO2949 (Accession NP_061014.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO2949.

[46233] Presenilin 1 (alzheimer disease 3) (PSEN1, Accession NP_015557.1) is another GAM3298 target gene, herein designated TARGET GENE. PSEN1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PSEN1 BINDING SITE, designated SEQ ID:8810, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46234] Another function of GAM3298 is therefore inhibition of Presenilin 1 (alzheimer disease 3) (PSEN1, Accession NP_015557.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PSEN1.

[46235] Presenilin 1 (alzheimer disease 3) (PSEN1, Accession NP_000012.1) is another GAM3298 target gene, herein designated TARGET GENE. PSEN1 BINDING SITE is a target

binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PSEN1 BINDING SITE, designated SEQ ID:8810, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46236] Another function of GAM3298 is therefore inhibition of Presenilin 1 (alzheimer disease 3) (PSEN1, Accession NP_000012.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PSEN1.

[46237] PSK (Accession NP_057235.1) is another GAM3298 target gene, herein designated TARGET GENE. PSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PSK BINDING SITE, designated SEQ ID:17787, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46238] Another function of GAM3298 is therefore inhibition of PSK (Accession NP_057235.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PSK.

[46239] Prostaglandin i2 (prostacyclin) synthase (PTGIS, Accession NP_000952.1) is another GAM3298 target gene, herein designated TARGET GENE. PTGIS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PTGIS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTGIS BINDING SITE, designated SEQ ID:4543, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46240] Another function of GAM3298 is therefore inhibition of Prostaglandin i2 (prostacyclin) synthase (PTGIS, Accession NP_000952.1), a gene which catalyzes the isomerization of prostaglandin h2 to prostacyclin (= prostaglandin i2). Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTGIS.

[46241] The function of PTGIS and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Ptk6 protein tyrosine kinase 6 (PTK6, Accession NP_005966.1) is another GAM3298 target gene, herein designated TARGET GENE. PTK6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PTK6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTK6 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46242] Another function of GAM3298 is therefore inhibition of Ptk6 protein tyrosine kinase 6 (PTK6, Accession NP_005966.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTK6.

[46243] Rab4b, member ras oncogene family (RAB4B, Accession NP_057238.2) is another GAM3298 target gene, herein designated TARGET GENE. RAB4B BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by RAB4B, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAB4B BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46244] Another function of GAM3298 is therefore inhibition of Rab4b, member ras oncogene family (RAB4B, Accession NP_057238.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB4B.

[46245] RABEX5 (Accession NP_055319.1) is another GAM3298 target gene, herein designated TARGET GENE. RABEX5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RABEX5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RABEX5 BINDING SITE, designated SEQ ID:6850, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46246] Another function of GAM3298 is therefore inhibition of RABEX5 (Accession NP_055319.1) . Accordingly, utilities of

GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RABEX5.

[46247] Rad51 homolog (reca homolog, e. coli) (s. cerevisiae) (RAD51, Accession NP_002866.2) is another GAM3298 target gene, herein designated TARGET GENE. RAD51 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RAD51, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAD51 BINDING SITE, designated SEQ ID:16562, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46248] Another function of GAM3298 is therefore inhibition of Rad51 homolog (reca homolog, e. coli) (s. cerevisiae) (RAD51, Accession NP_002866.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAD51.

[46249] Rad51 homolog (reca homolog, e. coli) (s. cerevisiae) (RAD51, Accession NP_597994.1) is another GAM3298 target gene, herein designated TARGET GENE. RAD51 BINDING SITE is a target binding site found in the 3` un-

translated region of multiple transcripts of mRNA encoded by RAD51, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAD51 BINDING SITE, designated SEQ ID:16562, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46250] Another function of GAM3298 is therefore inhibition of Rad51 homolog (reca homolog, e. coli) (s. cerevisiae) (RAD51, Accession NP_597994.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAD51.

[46251] RDHL (Accession NP_005762.2) is another GAM3298 target gene, herein designated TARGET GENE. RDHL BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by RDHL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RDHL BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46252] Another function of GAM3298 is therefore inhibition of RDHL (Accession NP_005762.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RDHL.

[46253] Recq protein-like 5 (RECQL5, Accession NP_004250.1) is another GAM3298 target gene, herein designated TARGET GENE. RECQL5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RECQL5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RECQL5 BINDING SITE, designated SEQ ID:2405, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46254] Another function of GAM3298 is therefore inhibition of Recq protein-like 5 (RECQL5, Accession NP_004250.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RECQL5.

[46255] SCR59 (Accession NP_075559.1) is another GAM3298 target gene, herein designated TARGET GENE. SCR59 BINDING SITE is a target binding site found in the 3` untrans-

lated region of mRNA encoded by SCR59, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SCR59 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46256] Another function of GAM3298 is therefore inhibition of SCR59 (Accession NP_075559.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCR59.

[46257] Secreted and transmembrane 1 (SECTM1, Accession NP_002995.1) is another GAM3298 target gene, herein designated TARGET GENE. SECTM1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SECTM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SECTM1 BINDING SITE, designated SEQ ID:18249, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46258] Another function of GAM3298 is therefore inhibition of

Secreted and transmembrane 1 (SECTM1, Accession NP_002995.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SECTM1.

[46259] Small edrk-rich factor 1a (telomeric) (SERF1A, Accession NP_068802.1) is another GAM3298 target gene, herein designated TARGET GENE. SERF1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SERF1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SERF1A BINDING SITE, designated SEQ ID:4210, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46260] Another function of GAM3298 is therefore inhibition of Small edrk-rich factor 1a (telomeric) (SERF1A, Accession NP_068802.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SERF1A.

[46261] Small edrk-rich factor 1b (centromeric) (SERF1B, Accession NP_075267.1) is another GAM3298 target gene, herein designated TARGET GENE. SERF1B BINDING SITE is a target

binding site found in the 3` untranslated region of mRNA encoded by SERF1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SERF1B BINDING SITE, designated SEQ ID:4210, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46262] Another function of GAM3298 is therefore inhibition of Small edrk-rich factor 1b (centromeric) (SERF1B, Accession NP_075267.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SERF1B.

[46263] Solute carrier family 17 (anion/sugar transporter), member 5 (SLC17A5, Accession NP_036566.1) is another GAM3298 target gene, herein designated TARGET GENE. SLC17A5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC17A5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC17A5 BINDING SITE, designated SEQ ID:3707, to the nucleotide sequence of GAM3298 RNA,

herein designated GAM RNA, also designated SEQ ID:259.

[46264] Another function of GAM3298 is therefore inhibition of Solute carrier family 17 (anion/sugar transporter), member 5 (SLC17A5, Accession NP_036566.1), a gene which is a member of a family of anion/cation symporters and therefore may be associated with Salla disease ; infantile sialic acid storage disorder. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of Salla disease ; infantile sialic acid storage disorder, and of other diseases and clinical conditions associated with SLC17A5.

[46265] The function of SLC17A5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.2.Solute carrier family 26, member 4 (SLC26A4, Accession NP_000432.1) is another GAM3298 target gene, herein designated TARGET GENE. SLC26A4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC26A4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC26A4 BINDING SITE, designated SEQ ID:3706, to the

nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46266] Another function of GAM3298 is therefore inhibition of Solute carrier family 26, member 4 (SLC26A4, Accession NP_000432.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC26A4.

[46267] Solute carrier family 31 (copper transporters), member 1 (SLC31A1, Accession NP_001850.1) is another GAM3298 target gene, herein designated TARGET GENE. SLC31A1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC31A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC31A1 BINDING SITE, designated SEQ ID:912, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46268] Another function of GAM3298 is therefore inhibition of Solute carrier family 31 (copper transporters), member 1 (SLC31A1, Accession NP_001850.1), a gene which is involved in high- affinity copper uptake. Accordingly, utilities of GAM3298 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with SLC31A1.

[46269] The function of SLC31A1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM257.1.SLC35E1 (Accession NP_079157.2) is another GAM3298 target gene, herein designated TARGET GENE. SLC35E1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC35E1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC35E1 BINDING SITE, designated SEQ ID:6353, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46270] Another function of GAM3298 is therefore inhibition of SLC35E1 (Accession NP_079157.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC35E1.

[46271] Swi/snf related, matrix associated, actin dependent regulator of chromatin, subfamily d, member 2 (SMARCD2, Ac-

cession NP_003068.2) is another GAM3298 target gene, herein designated TARGET GENE. SMARCD2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SMARCD2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SMARCD2 BINDING SITE, designated SEQ ID:6099, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46272] Another function of GAM3298 is therefore inhibition of Swi/snf related, matrix associated, actin dependent regulator of chromatin, subfamily d, member 2 (SMARCD2, Accession NP_003068.2), a gene which is involved in chromatin remodeling. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SMARCD2.

[46273] The function of SMARCD2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM537.1.Syntaphilin (SNPH, Accession NP_055538.1) is another GAM3298 target gene, herein designated TARGET GENE. SNPH BINDING SITE is a target binding site

found in the 3` untranslated region of mRNA encoded by SNPH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNPH BINDING SITE, designated SEQ ID:4989, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46274] Another function of GAM3298 is therefore inhibition of Syntaphilin (SNPH, Accession NP_055538.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNPH.

[46275] Sorting nexin 11 (SNX11, Accession NP_037455.2) is another GAM3298 target gene, herein designated TARGET GENE. SNX11 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SNX11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNX11 BINDING SITE, designated SEQ ID:19139, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46276] Another function of GAM3298 is therefore inhibition of Sorting nexin 11 (SNX11, Accession NP_037455.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNX11.

[46277] Sorting nexin 11 (SNX11, Accession NP_689450.1) is another GAM3298 target gene, herein designated TARGET GENE. SNX11 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SNX11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNX11 BINDING SITE, designated SEQ ID:19139, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46278] Another function of GAM3298 is therefore inhibition of Sorting nexin 11 (SNX11, Accession NP_689450.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNX11.

[46279] SNX22 (Accession NP_079074.1) is another GAM3298 target gene, herein designated TARGET GENE. SNX22 BIND-

ING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SNX22, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNX22 BINDING SITE, designated SEQ ID:8175, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46280] Another function of GAM3298 is therefore inhibition of SNX22 (Accession NP_079074.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNX22.

[46281] SNX25 (Accession NP_114159.1) is another GAM3298 target gene, herein designated TARGET GENE. SNX25 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SNX25, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNX25 BINDING SITE, designated SEQ ID:11908, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46282] Another function of GAM3298 is therefore inhibition of

SNX25 (Accession NP_114159.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNX25.

[46283] Serine palmitoyltransferase, long chain base subunit 1 (SPTLC1, Accession NP_847894.1) is another GAM3298 target gene, herein designated TARGET GENE. SPTLC1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SPTLC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SPTLC1 BINDING SITE, designated SEQ ID:478, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46284] Another function of GAM3298 is therefore inhibition of Serine palmitoyltransferase, long chain base subunit 1 (SPTLC1, Accession NP_847894.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SPTLC1.

[46285] Staufen, rna binding protein (drosophila) (STAU, Accession NP_059347.1) is another GAM3298 target gene, herein designated TARGET GENE. STAU BINDING SITE is a target

binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by STAU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of STAU BINDING SITE, designated SEQ ID:17501, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46286] Another function of GAM3298 is therefore inhibition of Staufen, rna binding protein (drosophila) (STAU, Accession NP_059347.1), a gene which may play a role in specific positioning of mrnas at given sites in the cell and in stimulating their translation at the site. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STAU.

[46287] The function of STAU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM37.1.Synaptojanin 2 binding protein (SYNJ2BP, Accession NP_060843.1) is another GAM3298 target gene, herein designated TARGET GENE. SYNJ2BP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SYNJ2BP, corresponding to a target

binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SYNJ2BP BINDING SITE, designated SEQ ID:666, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46288] Another function of GAM3298 is therefore inhibition of Synaptojanin 2 binding protein (SYNJ2BP, Accession NP_060843.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SYNJ2BP.

[46289] TEM7 (Accession NP_065138.2) is another GAM3298 target gene, herein designated TARGET GENE. TEM7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TEM7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TEM7 BINDING SITE, designated SEQ ID:14878, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46290] Another function of GAM3298 is therefore inhibition of TEM7 (Accession NP_065138.2), a gene which involves in

angiogenesis and therefore may be associated with Colorectal cancer. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of Colorectal cancer, and of other diseases and clinical conditions associated with TEM7.

[46291] The function of TEM7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.Testis expressed sequence 15 (TEX15, Accession NP_112561.1) is another GAM3298 target gene, herein designated TARGET GENE. TEX15 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TEX15, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TEX15 BINDING SITE, designated SEQ ID:18387, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46292] Another function of GAM3298 is therefore inhibition of Testis expressed sequence 15 (TEX15, Accession NP_112561.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with TEX15.

[46293] TMG4 (Accession NP_076986.1) is another GAM3298 target gene, herein designated TARGET GENE. TMG4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TMG4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TMG4 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46294] Another function of GAM3298 is therefore inhibition of TMG4 (Accession NP_076986.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TMG4.

[46295] Tumor necrosis factor receptor superfamily, member 10a (TNFRSF10A, Accession NP_003835.2) is another GAM3298 target gene, herein designated TARGET GENE. TNFRSF10A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNFRSF10A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of TNFRSF10A BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46296] Another function of GAM3298 is therefore inhibition of Tumor necrosis factor receptor superfamily, member 10a (TNFRSF10A, Accession NP_003835.2), a gene which is a member of the tumor necrosis factor receptor superfamily; involved in apoptosis; contains a cytoplasmic death domain. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TNFRSF10A.

[46297] The function of TNFRSF10A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM236.1.Tumor necrosis factor receptor superfamily, member 10d, decoy with truncated death domain (TNFRSF10D, Accession NP_003831.2) is another GAM3298 target gene, herein designated TARGET GENE. TNFRSF10D BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNFRSF10D, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNFRSF10D BINDING SITE, designated SEQ ID:20093, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46298] Another function of GAM3298 is therefore inhibition of Tumor necrosis factor receptor superfamily, member 10d, decoy with truncated death domain (TNFRSF10D, Accession NP_003831.2), a gene which activates NF- kappaB and inhibits TRAIL- induced apoptosis. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TNFRSF10D.

[46299] The function of TNFRSF10D and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM236.1.TOPK (Accession NP_060962.2) is another GAM3298 target gene, herein designated TARGET GENE. TOPK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TOPK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide se-

quences of TOPK BINDING SITE, designated SEQ ID:4288, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46300] Another function of GAM3298 is therefore inhibition of TOPK (Accession NP_060962.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TOPK.

[46301] Tripartite motif-containing 8 (TRIM8, Accession NP_112174.1) is another GAM3298 target gene, herein designated TARGET GENE. TRIM8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRIM8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRIM8 BINDING SITE, designated SEQ ID:16708, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46302] Another function of GAM3298 is therefore inhibition of Tripartite motif-containing 8 (TRIM8, Accession NP_112174.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRIM8.

[46303] Transient receptor potential cation channel, subfamily m, member 1 (TRPM1, Accession NP_002411.2) is another GAM3298 target gene, herein designated TARGET GENE. TRPM1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRPM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRPM1 BINDING SITE, designated SEQ ID:840, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46304] Another function of GAM3298 is therefore inhibition of Transient receptor potential cation channel, subfamily m, member 1 (TRPM1, Accession NP_002411.2), a gene which is suggested to mediate calcium entry. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRPM1.

[46305] The function of TRPM1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM94.1.Thioredoxin-like 2 (TXNL2, Accession NP_006532.1) is another GAM3298 target gene, herein

designated TARGET GENE. TXNL2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TXNL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TXNL2 BINDING SITE, designated SEQ ID:16694, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46306] Another function of GAM3298 is therefore inhibition of Thioredoxin-like 2 (TXNL2, Accession NP_006532.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TXNL2.

[46307] Uroplakin 1b (UPK1B, Accession NP_008883.1) is another GAM3298 target gene, herein designated TARGET GENE. UPK1B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UPK1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UPK1B BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated

GAM RNA, also designated SEQ ID:259.

[46308] Another function of GAM3298 is therefore inhibition of Uroplakin 1b (UPK1B, Accession NP_008883.1), a gene which strengthens and stabilizes the urothelial apical surface of the asymmetric unit membrane of mammalian bladder epithelium. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UPK1B.

[46309] The function of UPK1B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM223.1.Von hippel-lindau syndrome (VHL, Accession NP_000542.1) is another GAM3298 target gene, herein designated TARGET GENE. VHL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by VHL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VHL BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46310] Another function of GAM3298 is therefore inhibition of

Von hippel-lindau syndrome (VHL, Accession NP_000542.1), a gene which may control rna stability through the selective degradation of rna- bound proteins. and therefore is associated with Von hippel- lindau disease. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of Von hippel- lindau disease, and of other diseases and clinical conditions associated with VHL.

[46311] The function of VHL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.Vacuolar protein sorting 4b (yeast) (VPS4B, Accession NP_004860.2) is another GAM3298 target gene, herein designated TARGET GENE. VPS4B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by VPS4B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VPS4B BINDING SITE, designated SEQ ID:19238, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46312] Another function of GAM3298 is therefore inhibition of

Vacuolar protein sorting 4b (yeast) (VPS4B, Accession NP_004860.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VPS4B.

[46313] Williams beuren syndrome chromosome region 21 (WBSCR21, Accession NP_683710.1) is another GAM3298 target gene, herein designated TARGET GENE. WBSCR21 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by WBSCR21, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WBSCR21 BINDING SITE, designated SEQ ID:6665, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46314] Another function of GAM3298 is therefore inhibition of Williams beuren syndrome chromosome region 21 (WBSCR21, Accession NP_683710.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WBSCR21.

[46315] Williams beuren syndrome chromosome region 21

(WBSCR21, Accession NP_683711.1) is another GAM3298 target gene, herein designated TARGET GENE. WBSCR21 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by WBSCR21, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WBSCR21 BINDING SITE, designated SEQ ID:6665, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46316] Another function of GAM3298 is therefore inhibition of Williams beuren syndrome chromosome region 21 (WBSCR21, Accession NP_683711.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WBSCR21.

[46317] Williams beuren syndrome chromosome region 21 (WBSCR21, Accession NP_112585.2) is another GAM3298 target gene, herein designated TARGET GENE. WBSCR21 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by WBSCR21, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WBSCR21 BINDING SITE, designated SEQ ID:6665, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46318] Another function of GAM3298 is therefore inhibition of Williams beuren syndrome chromosome region 21 (WBSCR21, Accession NP_112585.2) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WBSCR21.

[46319] Williams beuren syndrome chromosome region 21 (WBSCR21, Accession NP_683713.1) is another GAM3298 target gene, herein designated TARGET GENE. WBSCR21 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by WBSCR21, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WBSCR21 BINDING SITE, designated SEQ ID:6665, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ

ID:259.

[46320] Another function of GAM3298 is therefore inhibition of Williams beuren syndrome chromosome region 21 (WBSCR21, Accession NP_683713.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WB-SCR21.

[46321] WDR23 (Accession NP_079506.3) is another GAM3298 target gene, herein designated TARGET GENE. WDR23 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by WDR23, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WDR23 BINDING SITE, designated SEQ ID:1087, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46322] Another function of GAM3298 is therefore inhibition of WDR23 (Accession NP_079506.3) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WDR23.

[46323] WDR23 (Accession NP_852002.1) is another GAM3298

target gene, herein designated TARGET GENE. WDR23 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by WDR23, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WDR23 BINDING SITE, designated SEQ ID:1087, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46324] Another function of GAM3298 is therefore inhibition of WDR23 (Accession NP_852002.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WDR23.

[46325] Wee1 homolog (s. pombe) (WEE1, Accession NP_003381.1) is another GAM3298 target gene, herein designated TARGET GENE. WEE1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by WEE1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WEE1 BINDING SITE, designated SEQ ID:5763, to the nucleotide sequence of GAM3298 RNA,

herein designated GAM RNA, also designated SEQ ID:259.

[46326] Another function of GAM3298 is therefore inhibition of Wee1 homolog (s. pombe) (WEE1, Accession NP_003381.1), a gene which negatively regulates entry into mitosis by catalyzing the inhibitory tyrosine phosphorylation of CDC2/cyclin. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WEE1.

[46327] The function of WEE1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM322.1.X-ray repair complementing defective repair in chinese hamster cells 2 (XRCC2, Accession NP_005422.1) is another GAM3298 target gene, herein designated TARGET GENE. XRCC2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by XRCC2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of XRCC2 BINDING SITE, designated SEQ ID:2322, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46328] Another function of GAM3298 is therefore inhibition of X-ray repair complementing defective repair in chinese hamster cells 2 (XRCC2, Accession NP_005422.1), a gene which involves in the homologous recombination repair (hrr) pathway of double- stranded dna. Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with XRCC2.

[46329] The function of XRCC2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.ZFP30 (Accession NP_055713.1) is another GAM3298 target gene, herein designated TARGET GENE. ZFP30 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZFP30, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZFP30 BINDING SITE, designated SEQ ID:1921, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46330] Another function of GAM3298 is therefore inhibition of ZFP30 (Accession NP_055713.1) . Accordingly, utilities of

GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZFP30.

[46331] Zinc finger protein 174 (ZNF174, Accession NP_003441.1) is another GAM3298 target gene, herein designated TARGET GENE. ZNF174 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ZNF174, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF174 BINDING SITE, designated SEQ ID:7167, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46332] Another function of GAM3298 is therefore inhibition of Zinc finger protein 174 (ZNF174, Accession NP_003441.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF174.

[46333] Zinc finger protein 197 (ZNF197, Accession NP_008922.1) is another GAM3298 target gene, herein designated TARGET GENE. ZNF197 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF197, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF197 BINDING SITE, designated SEQ ID:12246, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46334] Another function of GAM3298 is therefore inhibition of Zinc finger protein 197 (ZNF197, Accession NP_008922.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF197.

[46335] Zinc finger protein 264 (ZNF264, Accession NP_003408.1) is another GAM3298 target gene, herein designated TARGET GENE. ZNF264 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF264, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF264 BINDING SITE, designated SEQ ID:8644, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46336] Another function of GAM3298 is therefore inhibition of

Zinc finger protein 264 (ZNF264, Accession NP_003408.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF264.

[46337] ZNF450 (Accession NP_055612.1) is another GAM3298 target gene, herein designated TARGET GENE. ZNF450 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF450, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF450 BINDING SITE, designated SEQ ID:3706, to the nucleotide sequence of GAM3298 RNA, herein designated GAM RNA, also designated SEQ ID:259.

[46338] Another function of GAM3298 is therefore inhibition of ZNF450 (Accession NP_055612.1) . Accordingly, utilities of GAM3298 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF450.

[46339]

[46340] Fig. 8 further provides a conceptual description of a novel bioinformatically detected of the present invention, referred to here as Genomic Address Messenger 3418

(GAM3418), which modulates expression of respective target genes thereof, the function and utility of which target genes is known in the art.

[46341] GAM3418 is a novel bioinformatically detected regulatory, non protein coding, micro RNA (miRNA) gene. The method by which GAM3418 was detected is described hereinabove with reference to Figs. 8-15.

[46342] GAM3418 gene, herein designated GAM GENE, and GAM3418 target gene, herein designated TARGET GENE, are human genes contained in the human genome.

[46343] GAM3418 gene encodes a GAM3418 precursor RNA, herein designated GAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, GAM3418 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of GAM3418 precursor RNA is designated SEQ ID:147, and is provided hereinbelow with reference to the sequence listing part.

[46344] GAM3418 precursor RNA folds onto itself, forming GAM3418 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA

genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[46345] GAM3418 precursor RNA folds onto itself, forming GAM3418 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[46346] Nucleotide sequence of GAM3418 precursor RNA, designated SEQ-ID: 147, and a schematic representation of a predicted secondary folding of GAM3418 folded precursor RNA are further described with reference to Table 2, hereby incorporated by reference.

[46347] An enzyme complex designated DICER COMPLEX, `dices` the GAM3418 folded precursor RNA into GAM3418 RNA, herein designated GAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short

~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy Group: A) nucleotide sequence of GAM3418 RNA is designated SEQ ID:291, and is provided hereinbelow with references to the sequence listing part and Table 3, hereby incorporated by reference.

[46348] GAM3418 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM3418 target RNA, herein designated GAM TARGET RNA. GAM3418 target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[46349] GAM3418 RNA, herein designated GAM RNA, binds complementarily to one or more target binding sites located in untranslated regions of GAM3418 target RNA, herein designated GAM TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of GAM3418 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the target binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING

SITE II and BINDING SITE III respectively. It is appreciated that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limiting GAM3418 RNA may have a different number of target binding sites in untranslated regions of a GAM3418 target RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3`UTR region, this is meant as an example only these target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[46350] The complementary binding of GAM3418 RNA, herein designated GAM RNA, to target binding sites on GAM3418 target RNA, herein designated GAM TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM3418 target RNA into GAM3418 target protein, herein designated GAM TARGET PROTEIN. GAM target protein is therefore outlined by a broken line.

[46351] It is appreciated that GAM3418 target gene, herein designated TARGET GENE, in fact represents a plurality of GAM3418 target genes. The mRNA of each one of this plurality of GAM3418 target genes comprises one or more target binding sites, each having a nucleotide sequence which is at least partly complementary to GAM3418 RNA,

herein designated GAM RNA, and which when bound by GAM3418 RNA causes inhibition of translation of respective one or more GAM3418 target proteins.

[46352] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 8 with specific reference to translational inhibition exerted by GAM3418 gene, herein designated GAM GENE, on one or more GAM3418 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., Perspective: Glimpses of a tiny RNA world, Science 294,779 (2001)).

[46353] It is appreciated that specific functions and accordingly utilities of GAM3418 correlate with, and may be deduced from, the identity of the target genes which GAM3418 binds and inhibits, and the function of these target genes,

as elaborated hereinbelow.

[46354]

[46355]

[46356] A disintegrin and metalloproteinase domain 19 (meltrin beta) (ADAM19, Accession NP_150377.1) is a GAM3418 target gene, herein designated TARGET GENE. ADAM19 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM19, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADAM19 BINDING SITE, designated SEQ ID:2787, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46357] A function of GAM3418 is therefore inhibition of A disintegrin and metalloproteinase domain 19 (meltrin beta) (ADAM19, Accession NP_150377.1), a gene which participates in the proteolytic processing of beta- type neuregulin isoforms . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADAM19.

[46358] The function of ADAM19 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM129.1.B1 (Accession NP_055266.1) is another GAM3418 target gene, herein designated TARGET GENE. B1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by B1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of B1 BINDING SITE, designated SEQ ID:9166, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46359] Another function of GAM3418 is therefore inhibition of B1 (Accession NP_055266.1) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with B1.

[46360] Cyclin-dependent kinase 4 (CDK4, Accession NP_000066.1) is another GAM3418 target gene, herein designated TARGET GENE. CDK4 BINDING SITE1 and CDK4 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CDK4, corresponding to target binding sites such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDK4 BINDING SITE1 and CDK4 BINDING SITE2, designated SEQ ID:5869 and SEQ ID:12296 respectively, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46361] Another function of GAM3418 is therefore inhibition of Cyclin-dependent kinase 4 (CDK4, Accession NP_000066.1) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDK4.

[46362] Cleavage and polyadenylation specific factor 2, 100kda (CPSF2, Accession XP_029311.2) is another GAM3418 target gene, herein designated TARGET GENE. CPSF2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CPSF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CPSF2 BINDING SITE, designated SEQ ID:20174, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46363] Another function of GAM3418 is therefore inhibition of Cleavage and polyadenylation specific factor 2, 100kda (CPSF2, Accession XP_029311.2) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CPSF2.

[46364] Cylindromatosis (turban tumor syndrome) (CYLD, Accession NP_056062.1) is another GAM3418 target gene, herein designated TARGET GENE. CYLD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CYLD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYLD BINDING SITE, designated SEQ ID:18734, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46365] Another function of GAM3418 is therefore inhibition of Cylindromatosis (turban tumor syndrome) (CYLD, Accession NP_056062.1) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYLD.

[46366] DKFZp547G0215 (Accession NP_775914.1) is another GAM3418 target gene, herein designated TARGET GENE.

DKFZp547G0215 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp547G0215, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp547G0215 BINDING SITE, designated SEQ ID:3848, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46367] Another function of GAM3418 is therefore inhibition of DKFZp547G0215 (Accession NP_775914.1) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp547G0215.

[46368] Ells1 (Accession NP_690006.1) is another GAM3418 target gene, herein designated TARGET GENE. Ells1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by Ells1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of Ells1 BINDING SITE, designated SEQ ID:11977, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA,

also designated SEQ ID:291.

[46369] Another function of GAM3418 is therefore inhibition of Ells1 (Accession NP_690006.1) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with Ells1.

[46370] Estrogen-related receptor gamma (ESRRG, Accession NP_001429.1) is another GAM3418 target gene, herein designated TARGET GENE. ESRRG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ESRRG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ESRRG BINDING SITE, designated SEQ ID:19845, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46371] Another function of GAM3418 is therefore inhibition of Estrogen-related receptor gamma (ESRRG, Accession NP_001429.1), a gene which Estrogen- related receptor gamma. Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ESRRG.

[46372] The function of ESRRG and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM200.1.FLJ11175 (Accession NP_060819.1) is another GAM3418 target gene, herein designated TARGET GENE. FLJ11175 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ11175, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11175 BINDING SITE, designated SEQ ID:12392, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46373] Another function of GAM3418 is therefore inhibition of FLJ11175 (Accession NP_060819.1) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11175.

[46374] FLJ12660 (Accession NP_079428.1) is another GAM3418 target gene, herein designated TARGET GENE. FLJ12660 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12660, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12660 BINDING SITE, designated SEQ ID:9523, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46375] Another function of GAM3418 is therefore inhibition of FLJ12660 (Accession NP_079428.1) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12660.

[46376] FLJ13149 (Accession NP_068598.1) is another GAM3418 target gene, herein designated TARGET GENE. FLJ13149 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ13149, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13149 BINDING SITE, designated SEQ ID:3760, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46377] Another function of GAM3418 is therefore inhibition of FLJ13149 (Accession NP_068598.1) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ13149.

[46378] FLJ13912 (Accession NP_073607.2) is another GAM3418 target gene, herein designated TARGET GENE. FLJ13912 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13912, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13912 BINDING SITE, designated SEQ ID:16332, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46379] Another function of GAM3418 is therefore inhibition of FLJ13912 (Accession NP_073607.2) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13912.

[46380] FLJ14103 (Accession NP_078965.1) is another GAM3418 target gene, herein designated TARGET GENE. FLJ14103 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ14103, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ14103 BINDING SITE, designated SEQ ID:15222, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46381] Another function of GAM3418 is therefore inhibition of FLJ14103 (Accession NP_078965.1) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14103.

[46382] FLJ31033 (Accession XP_037817.5) is another GAM3418 target gene, herein designated TARGET GENE. FLJ31033 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ31033, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31033 BINDING SITE, designated SEQ ID:10323, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46383] Another function of GAM3418 is therefore inhibition of FLJ31033 (Accession XP_037817.5) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ31033.

[46384] GRIPE (Accession XP_170749.4) is another GAM3418 target gene, herein designated TARGET GENE. GRIPE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by GRIPE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GRIPE BINDING SITE, designated SEQ ID:1088, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46385] Another function of GAM3418 is therefore inhibition of GRIPE (Accession XP_170749.4) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GRIPE.

[46386] General transcription factor iie, polypeptide 2, beta 34kda (GTF2E2, Accession NP_002086.1) is another GAM3418 target gene, herein designated TARGET GENE. GTF2E2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GTF2E2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

GTF2E2 BINDING SITE, designated SEQ ID:19529, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46387] Another function of GAM3418 is therefore inhibition of General transcription factor iie, polypeptide 2, beta 34kda (GTF2E2, Accession NP_002086.1) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GTF2E2.

[46388] HH114 (Accession NP_115888.1) is another GAM3418 target gene, herein designated TARGET GENE. HH114 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HH114, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HH114 BINDING SITE, designated SEQ ID:11665, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46389] Another function of GAM3418 is therefore inhibition of HH114 (Accession NP_115888.1) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HH114.

[46390] 5-hydroxytryptamine (serotonin) receptor 7 (adenylate cyclase-coupled) (HTR7, Accession NP_062874.1) is another GAM3418 target gene, herein designated TARGET GENE. HTR7 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by HTR7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HTR7 BINDING SITE, designated SEQ ID:751, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46391] Another function of GAM3418 is therefore inhibition of 5-hydroxytryptamine (serotonin) receptor 7 (adenylate cyclase-coupled) (HTR7, Accession NP_062874.1), a gene which stimulates adenylate cyclase. Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HTR7.

[46392] The function of HTR7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM492.2.5-hydroxytryptamine (serotonin) receptor 7 (adenylate cyclase-coupled) (HTR7, Accession NP_000863.1) is another GAM3418 target gene, herein

designated TARGET GENE. HTR7 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by HTR7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HTR7 BINDING SITE, designated SEQ ID:751, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46393] Another function of GAM3418 is therefore inhibition of 5-hydroxytryptamine (serotonin) receptor 7 (adenylate cyclase-coupled) (HTR7, Accession NP_000863.1), a gene which stimulates adenylate cyclase. Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HTR7.

[46394] The function of HTR7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM492.2.5-hydroxytryptamine (serotonin) receptor 7 (adenylate cyclase-coupled) (HTR7, Accession NP_062873.1) is another GAM3418 target gene, herein designated TARGET GENE. HTR7 BINDING SITE is a target binding site found in the 3` untranslated region of multi-

ple transcripts of mRNA encoded by HTR7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HTR7 BINDING SITE, designated SEQ ID:751, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46395] Another function of GAM3418 is therefore inhibition of 5-hydroxytryptamine (serotonin) receptor 7 (adenylate cyclase-coupled) (HTR7, Accession NP_062873.1), a gene which stimulates adenylate cyclase. Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HTR7.

[46396] The function of HTR7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM492.2.KIAA1196 (Accession XP_028968.3) is another GAM3418 target gene, herein designated TARGET GENE. KIAA1196 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1196, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of KIAA1196 BINDING SITE, designated SEQ ID:3870, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46397] Another function of GAM3418 is therefore inhibition of KIAA1196 (Accession XP_028968.3) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1196.

[46398] KIAA1203 (Accession XP_049683.4) is another GAM3418 target gene, herein designated TARGET GENE. KIAA1203 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1203, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1203 BINDING SITE, designated SEQ ID:16550, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46399] Another function of GAM3418 is therefore inhibition of KIAA1203 (Accession XP_049683.4) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

KIAA1203.

[46400] Lim domain kinase 2 (LIMK2, Accession NP_005560.1) is another GAM3418 target gene, herein designated TARGET GENE. LIMK2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LIMK2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LIMK2 BINDING SITE, designated SEQ ID:7977, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46401] Another function of GAM3418 is therefore inhibition of Lim domain kinase 2 (LIMK2, Accession NP_005560.1) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LIMK2.

[46402] Lim domain kinase 2 (LIMK2, Accession NP_057952.1) is another GAM3418 target gene, herein designated TARGET GENE. LIMK2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LIMK2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BIND-

ING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LIMK2 BINDING SITE, designated SEQ ID:7977, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46403] Another function of GAM3418 is therefore inhibition of Lim domain kinase 2 (LIMK2, Accession NP_057952.1) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LIMK2.

[46404] LOC126755 (Accession XP_059074.1) is another GAM3418 target gene, herein designated TARGET GENE. LOC126755 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC126755, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC126755 BINDING SITE, designated SEQ ID:16572, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46405] Another function of GAM3418 is therefore inhibition of LOC126755 (Accession XP_059074.1) . Accordingly, utili-

ties of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC126755.

[46406] LOC129607 (Accession XP_059368.4) is another GAM3418 target gene, herein designated TARGET GENE. LOC129607 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC129607, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC129607 BINDING SITE, designated SEQ ID:3587, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46407] Another function of GAM3418 is therefore inhibition of LOC129607 (Accession XP_059368.4) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC129607.

[46408] LOC145652 (Accession XP_096827.1) is another GAM3418 target gene, herein designated TARGET GENE. LOC145652 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

LOC145652, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145652 BINDING SITE, designated SEQ ID:8999, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46409] Another function of GAM3418 is therefore inhibition of LOC145652 (Accession XP_096827.1) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145652.

[46410] LOC145783 (Accession XP_085231.2) is another GAM3418 target gene, herein designated TARGET GENE. LOC145783 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC145783, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145783 BINDING SITE, designated SEQ ID:8080, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46411] Another function of GAM3418 is therefore inhibition of LOC145783 (Accession XP_085231.2) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145783.

[46412] LOC152519 (Accession XP_087483.3) is another GAM3418 target gene, herein designated TARGET GENE. LOC152519 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC152519, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152519 BINDING SITE, designated SEQ ID:10441, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46413] Another function of GAM3418 is therefore inhibition of LOC152519 (Accession XP_087483.3) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152519.

[46414] LOC283295 (Accession XP_210964.1) is another GAM3418 target gene, herein designated TARGET GENE.

LOC283295 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283295, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283295 BINDING SITE, designated SEQ ID:13815, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46415] Another function of GAM3418 is therefore inhibition of LOC283295 (Accession XP_210964.1) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283295.

[46416] LOC283505 (Accession XP_208702.1) is another GAM3418 target gene, herein designated TARGET GENE. LOC283505 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283505, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283505 BINDING SITE, designated SEQ ID:9453, to the nucleotide sequence of

GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46417] Another function of GAM3418 is therefore inhibition of LOC283505 (Accession XP_208702.1) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283505.

[46418] LOC283596 (Accession XP_294746.1) is another GAM3418 target gene, herein designated TARGET GENE. LOC283596 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283596, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283596 BINDING SITE, designated SEQ ID:604, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46419] Another function of GAM3418 is therefore inhibition of LOC283596 (Accession XP_294746.1) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283596.

[46420] LOC283817 (Accession XP_211215.1) is another GAM3418 target gene, herein designated TARGET GENE. LOC283817 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283817, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283817 BINDING SITE, designated SEQ ID:12884, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46421] Another function of GAM3418 is therefore inhibition of LOC283817 (Accession XP_211215.1) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283817.

[46422] LOC283940 (Accession XP_208917.3) is another GAM3418 target gene, herein designated TARGET GENE. LOC283940 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283940, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC283940 BINDING SITE, designated SEQ ID:2801, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46423] Another function of GAM3418 is therefore inhibition of LOC283940 (Accession XP_208917.3) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283940.

[46424] LOC283980 (Accession XP_208940.2) is another GAM3418 target gene, herein designated TARGET GENE. LOC283980 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283980, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283980 BINDING SITE, designated SEQ ID:2801, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46425] Another function of GAM3418 is therefore inhibition of LOC283980 (Accession XP_208940.2) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC283980.

[46426] LOC284542 (Accession XP_209254.1) is another GAM3418 target gene, herein designated TARGET GENE. LOC284542 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284542, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284542 BINDING SITE, designated SEQ ID:11511, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46427] Another function of GAM3418 is therefore inhibition of LOC284542 (Accession XP_209254.1) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284542.

[46428] LOC284647 (Accession XP_211569.1) is another GAM3418 target gene, herein designated TARGET GENE. LOC284647 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284647, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284647 BINDING SITE, designated SEQ ID:8747, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46429] Another function of GAM3418 is therefore inhibition of LOC284647 (Accession XP_211569.1) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284647.

[46430] LOC284719 (Accession XP_211601.1) is another GAM3418 target gene, herein designated TARGET GENE. LOC284719 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284719, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284719 BINDING SITE, designated SEQ ID:13651, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46431] Another function of GAM3418 is therefore inhibition of

LOC284719 (Accession XP_211601.1) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284719.

[46432] LOC284950 (Accession XP_211703.1) is another GAM3418 target gene, herein designated TARGET GENE. LOC284950 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284950, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284950 BINDING SITE, designated SEQ ID:6222, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46433] Another function of GAM3418 is therefore inhibition of LOC284950 (Accession XP_211703.1) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284950.

[46434] LOC285786 (Accession XP_208349.1) is another GAM3418 target gene, herein designated TARGET GENE. LOC285786 BINDING SITE is a target binding site found in

the 3` untranslated region of mRNA encoded by LOC285786, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285786 BINDING SITE, designated SEQ ID:8604, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46435] Another function of GAM3418 is therefore inhibition of LOC285786 (Accession XP_208349.1) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285786.

[46436] LOC347775 (Accession XP_302601.1) is another GAM3418 target gene, herein designated TARGET GENE. LOC347775 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC347775, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC347775 BINDING SITE, designated SEQ ID:1860, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:291.

[46437] Another function of GAM3418 is therefore inhibition of LOC347775 (Accession XP_302601.1) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC347775.

[46438] LOC348731 (Accession XP_300399.1) is another GAM3418 target gene, herein designated TARGET GENE. LOC348731 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348731, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348731 BINDING SITE, designated SEQ ID:13922, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46439] Another function of GAM3418 is therefore inhibition of LOC348731 (Accession XP_300399.1) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348731.

[46440] LOC349257 (Accession XP_300996.1) is another

GAM3418 target gene, herein designated TARGET GENE. LOC349257 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC349257, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349257 BINDING SITE, designated SEQ ID:17812, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46441] Another function of GAM3418 is therefore inhibition of LOC349257 (Accession XP_300996.1) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349257.

[46442] LOC349265 (Accession XP_301000.1) is another GAM3418 target gene, herein designated TARGET GENE. LOC349265 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC349265, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349265 BINDING SITE, desig-

nated SEQ ID:17812, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46443] Another function of GAM3418 is therefore inhibition of LOC349265 (Accession XP_301000.1) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349265.

[46444] Mitogen-activated protein kinase 14 (MAPK14, Accession NP_001306.1) is another GAM3418 target gene, herein designated TARGET GENE. MAPK14 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPK14, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAPK14 BINDING SITE, designated SEQ ID:5165, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46445] Another function of GAM3418 is therefore inhibition of Mitogen-activated protein kinase 14 (MAPK14, Accession NP_001306.1), a gene which is important for cytokine production; responds to changes in extracellular osmolar-

ity. Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAPK14.

[46446] The function of MAPK14 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM473.1.Mitogen-activated protein kinase 14 (MAPK14, Accession NP_620581.1) is another GAM3418 target gene, herein designated TARGET GENE. MAPK14 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPK14, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAPK14 BINDING SITE, designated SEQ ID:5165, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46447] Another function of GAM3418 is therefore inhibition of Mitogen-activated protein kinase 14 (MAPK14, Accession NP_620581.1), a gene which is important for cytokine production; responds to changes in extracellular osmolarity. Accordingly, utilities of GAM3418 include diagnosis,

prevention and treatment of diseases and clinical conditions associated with MAPK14.

[46448] The function of MAPK14 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM473.1.Mitogen-activated protein kinase 14 (MAPK14, Accession NP_620583.1) is another GAM3418 target gene, herein designated TARGET GENE. MAPK14 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPK14, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAPK14 BINDING SITE, designated SEQ ID:5165, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46449] Another function of GAM3418 is therefore inhibition of Mitogen-activated protein kinase 14 (MAPK14, Accession NP_620583.1), a gene which is important for cytokine production; responds to changes in extracellular osmolarity. Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical condi-

tions associated with MAPK14.

[46450] The function of MAPK14 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM473.1.MGC45866 (Accession NP_689472.2) is another GAM3418 target gene, herein designated TARGET GENE. MGC45866 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC45866, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC45866 BINDING SITE, designated SEQ ID:5930, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46451] Another function of GAM3418 is therefore inhibition of MGC45866 (Accession NP_689472.2) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC45866.

[46452] Nebulin (NEB, Accession NP_004534.1) is another GAM3418 target gene, herein designated TARGET GENE. NEB BINDING SITE is a target binding site found in the 3`

untranslated region of mRNA encoded by NEB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NEB BINDING SITE, designated SEQ ID:14890, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46453] Another function of GAM3418 is therefore inhibition of Nebulin (NEB, Accession NP_004534.1) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NEB.

[46454] NET-2 (Accession NP_036470.1) is another GAM3418 target gene, herein designated TARGET GENE. NET-2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NET-2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NET-2 BINDING SITE, designated SEQ ID:10940, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46455] Another function of GAM3418 is therefore inhibition of

NET-2 (Accession NP_036470.1) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NET-2.

[46456] 8-oxoguanine dna glycosylase (OGG1, Accession NP_058438.1) is another GAM3418 target gene, herein designated TARGET GENE. OGG1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by OGG1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OGG1 BINDING SITE, designated SEQ ID:20054, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46457] Another function of GAM3418 is therefore inhibition of 8-oxoguanine dna glycosylase (OGG1, Accession NP_058438.1), a gene which is involved in base excision DNA repair and removal of 8- oxyguanine and therefore may be associated with Tumorigenesis. Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of Tumorigenesis, and of other diseases and clinical conditions associated with OGG1.

[46458] The function of OGG1 and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.Protocadherin 12 (PCDH12, Accession NP_057664.1) is another GAM3418 target gene, herein designated TARGET GENE. PCDH12 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PCDH12, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDH12 BINDING SITE, designated SEQ ID:1606, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46459] Another function of GAM3418 is therefore inhibition of Protocadherin 12 (PCDH12, Accession NP_057664.1), a gene which is a member of a family of nonclassical cadherins. Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDH12.

[46460] The function of PCDH12 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.Polymerase (dna directed) sigma (POLS, Ac-

cession NP_008930.1) is another GAM3418 target gene, herein designated TARGET GENE. POLS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by POLS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of POLS BINDING SITE, designated SEQ ID:19359, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46461] Another function of GAM3418 is therefore inhibition of Polymerase (dna directed) sigma (POLS, Accession NP_008930.1), a gene which is necessary for chromosome segregation. Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with POLS.

[46462] The function of POLS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM96.1.PP1665 (Accession NP_110419.3) is another GAM3418 target gene, herein designated TARGET GENE. PP1665 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PP1665, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PP1665 BINDING SITE, designated SEQ ID:1909, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46463] Another function of GAM3418 is therefore inhibition of PP1665 (Accession NP_110419.3) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PP1665.

[46464] Protein tyrosine phosphatase, non-receptor type 11 (noonan syndrome 1) (PTPN11, Accession NP_002825.2) is another GAM3418 target gene, herein designated TARGET GENE. PTPN11 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PTPN11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTPN11 BINDING SITE, designated SEQ ID:13861, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46465] Another function of GAM3418 is therefore inhibition of

Protein tyrosine phosphatase, non-receptor type 11 (noonan syndrome 1) (PTPN11, Accession NP_002825.2) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTPN11.

[46466] Rab17, member ras oncogene family (RAB17, Accession NP_071894.1) is another GAM3418 target gene, herein designated TARGET GENE. RAB17 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAB17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAB17 BINDING SITE, designated SEQ ID:16304, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46467] Another function of GAM3418 is therefore inhibition of Rab17, member ras oncogene family (RAB17, Accession NP_071894.1) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB17.

[46468] SWAP70 (Accession XP_049197.2) is another GAM3418 target gene, herein designated TARGET GENE. SWAP70

BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SWAP70, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SWAP70 BINDING SITE, designated SEQ ID:18354, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46469] Another function of GAM3418 is therefore inhibition of SWAP70 (Accession XP_049197.2), a gene which is involved not only in nuclear events but also in signaling in B- cell activation. Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SWAP70.

[46470] The function of SWAP70 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM257.1.SWAP70 (Accession NP_055870.1) is another GAM3418 target gene, herein designated TARGET GENE. SWAP70 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SWAP70, corresponding to a target binding

site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SWAP70 BINDING SITE, designated SEQ ID:18354, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46471] Another function of GAM3418 is therefore inhibition of SWAP70 (Accession NP_055870.1), a gene which is involved not only in nuclear events but also in signaling in B- cell activation. Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SWAP70.

[46472] The function of SWAP70 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM257.1.Wolf-hirschhorn syndrome candidate 1 (WHSC1, Accession NP_055734.1) is another GAM3418 target gene, herein designated TARGET GENE. WHSC1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by WHSC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of WHSC1 BINDING SITE, designated SEQ ID:13876, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46473] Another function of GAM3418 is therefore inhibition of Wolf-hirschhorn syndrome candidate 1 (WHSC1, Accession NP_055734.1), a gene which binds covalently to and repairs g/t mismatches. and therefore may be associated with Wolf- hirschhorn syndrome. Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of Wolf- hirschhorn syndrome, and of other diseases and clinical conditions associated with WHSC1.

[46474] The function of WHSC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Zinc finger protein 323 (ZNF323, Accession NP_112161.2) is another GAM3418 target gene, herein designated TARGET GENE. ZNF323 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF323, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF323 BINDING

SITE, designated SEQ ID:11866, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46475] Another function of GAM3418 is therefore inhibition of Zinc finger protein 323 (ZNF323, Accession NP_112161.2) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF323.

[46476] Zinc finger protein 336 (ZNF336, Accession NP_071927.1) is another GAM3418 target gene, herein designated TARGET GENE. ZNF336 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF336, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF336 BINDING SITE, designated SEQ ID:11914, to the nucleotide sequence of GAM3418 RNA, herein designated GAM RNA, also designated SEQ ID:291.

[46477] Another function of GAM3418 is therefore inhibition of Zinc finger protein 336 (ZNF336, Accession NP_071927.1) . Accordingly, utilities of GAM3418 include diagnosis, prevention and treatment of diseases and clinical condi-

tions associated with ZNF336.

[46478]

[46479] Fig. 8 further provides a conceptual description of a novel bioinformatically detected of the present invention, referred to here as Genomic Address Messenger 3431 (GAM3431), which modulates expression of respective target genes thereof, the function and utility of which target genes is known in the art.

[46480] GAM3431 is a novel bioinformatically detected regulatory, non protein coding, micro RNA (miRNA) gene. The method by which GAM3431 was detected is described hereinabove with reference to Figs. 8-15.

[46481] GAM3431 gene, herein designated GAM GENE, and GAM3431 target gene, herein designated TARGET GENE, are human genes contained in the human genome.

[46482] GAM3431 gene encodes a GAM3431 precursor RNA, herein designated GAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, GAM3431 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of GAM3431 precursor RNA is designated SEQ ID:105, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:105 is

located at position 6952115 relative to chromosome 12.

[46483] GAM3431 precursor RNA folds onto itself, forming GAM3431 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[46484] GAM3431 precursor RNA folds onto itself, forming GAM3431 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[46485] Nucleotide sequence of GAM3431 precursor RNA, designated SEQ-ID: 105, and a schematic representation of a predicted secondary folding of GAM3431 folded precursor RNA are further described with reference to Table 2,

hereby incorporated by reference.

[46486] An enzyme complex designated DICER COMPLEX, `dices` the GAM3431 folded precursor RNA into GAM3431 RNA, herein designated GAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy Group: A) nucleotide sequence of GAM3431 RNA is designated SEQ ID:356, and is provided hereinbelow with references to the sequence listing part and Table 3, hereby incorporated by reference.

[46487] GAM3431 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM3431 target RNA, herein designated GAM TARGET RNA. GAM3431 target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[46488] GAM3431 RNA, herein designated GAM RNA, binds complementarily to one or more target binding sites located in untranslated regions of GAM3431 target RNA, herein des-

ignated GAM TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of GAM3431 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the target binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limiting GAM3431 RNA may have a different number of target binding sites in untranslated regions of a GAM3431 target RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3`UTR region, this is meant as an example only these target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[46489] The complementary binding of GAM3431 RNA, herein designated GAM RNA, to target binding sites on GAM3431 target RNA, herein designated GAM TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM3431 target RNA into GAM3431 target protein, herein designated GAM TARGET PROTEIN. GAM target protein is therefore outlined by a broken line.

[46490] It is appreciated that GAM3431 target gene, herein designated TARGET GENE, in fact represents a plurality of GAM3431 target genes. The mRNA of each one of this plurality of GAM3431 target genes comprises one or more target binding sites, each having a nucleotide sequence which is at least partly complementary to GAM3431 RNA, herein designated GAM RNA, and which when bound by GAM3431 RNA causes inhibition of translation of respective one or more GAM3431 target proteins.

[46491] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 8 with specific reference to translational inhibition exerted by GAM3431 gene, herein designated GAM GENE, on one or more GAM3431 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have

not yet been found (Ruvkun G., Perspective: Glimpses of a tiny RNA world, Science 294,779 (2001)).

[46492] It is appreciated that specific functions and accordingly utilities of GAM3431 correlate with, and may be deduced from, the identity of the target genes which GAM3431 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[46493]

[46494]

[46495] A2BP1 (Accession NP_665900.1) is a GAM3431 target gene, herein designated TARGET GENE. A2BP1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by A2BP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of A2BP1 BINDING SITE, designated SEQ ID:7176, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46496] A function of GAM3431 is therefore inhibition of A2BP1 (Accession NP_665900.1) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with A2BP1.

[46497] A2BP1 (Accession NP_665898.1) is another GAM3431 target gene, herein designated TARGET GENE. A2BP1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by A2BP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of A2BP1 BINDING SITE, designated SEQ ID:7176, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46498] Another function of GAM3431 is therefore inhibition of A2BP1 (Accession NP_665898.1) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with A2BP1.

[46499] A2BP1 (Accession NP_665899.1) is another GAM3431 target gene, herein designated TARGET GENE. A2BP1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by A2BP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of A2BP1 BINDING SITE, designated SEQ ID:7176, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46500] Another function of GAM3431 is therefore inhibition of A2BP1 (Accession NP_665899.1) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with A2BP1.

[46501] Atp-binding cassette, sub-family c (cftr/mrp), member 13 (ABCC13, Accession NP_620054.1) is another GAM3431 target gene, herein designated TARGET GENE. ABCC13 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ABCC13, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABCC13 BINDING SITE, designated SEQ ID:13374, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46502] Another function of GAM3431 is therefore inhibition of Atp-binding cassette, sub-family c (cftr/mrp), member 13 (ABCC13, Accession NP_620054.1) . Accordingly, utilities

of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABCC13.

[46503] Ras homolog gene family, member e (ARHE, Accession NP_005159.1) is another GAM3431 target gene, herein designated TARGET GENE. ARHE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARHE BINDING SITE, designated SEQ ID:4853, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46504] Another function of GAM3431 is therefore inhibition of Ras homolog gene family, member e (ARHE, Accession NP_005159.1) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARHE.

[46505] Chromosome 3 open reading frame 4 (C3orf4, Accession NP_063948.1) is another GAM3431 target gene, herein designated TARGET GENE. C3orf4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA

encoded by C3orf4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C3orf4 BINDING SITE, designated SEQ ID:12739, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46506] Another function of GAM3431 is therefore inhibition of Chromosome 3 open reading frame 4 (C3orf4, Accession NP_063948.1) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C3orf4.

[46507] Cd59 antigen p18-20 (antigen identified by monoclonal antibodies 16.3a5, ej16, ej30, el32 and g344) (CD59, Accession NP_000602.1) is another GAM3431 target gene, herein designated TARGET GENE. CD59 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CD59, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CD59 BINDING SITE, designated SEQ ID:18546, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:356.

[46508] Another function of GAM3431 is therefore inhibition of Cd59 antigen p18-20 (antigen identified by monoclonal antibodies 16.3a5, ej16, ej30, el32 and g344) (CD59, Accession NP_000602.1), a gene which restricts lysis of human erythrocytes and leukocytes by homologous complement. and therefore may be associated with Cd59 deficiency (hemolytic anemia and thrombosis). Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of Cd59 deficiency (hemolytic anemia and thrombosis), and of other diseases and clinical conditions associated with CD59.

[46509] The function of CD59 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.1.DKFZP434G1411 (Accession XP_166383.1) is another GAM3431 target gene, herein designated TARGET GENE. DKFZP434G1411 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP434G1411, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434G1411

BINDING SITE, designated SEQ ID:13982, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46510] Another function of GAM3431 is therefore inhibition of DKFZP434G1411 (Accession XP_166383.1) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434G1411.

[46511] DKFZP564I0422 (Accession NP_113623.1) is another GAM3431 target gene, herein designated TARGET GENE. DKFZP564I0422 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP564I0422, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP564I0422 BINDING SITE, designated SEQ ID:3040, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46512] Another function of GAM3431 is therefore inhibition of DKFZP564I0422 (Accession NP_113623.1) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with DKFZP564I0422.

[46513] FAT3 (Accession XP_061871.5) is another GAM3431 target gene, herein designated TARGET GENE. FAT3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FAT3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FAT3 BINDING SITE, designated SEQ ID:3238, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46514] Another function of GAM3431 is therefore inhibition of FAT3 (Accession XP_061871.5) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FAT3.

[46515] FLJ13197 (Accession NP_078890.1) is another GAM3431 target gene, herein designated TARGET GENE. FLJ13197 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13197, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13197 BINDING SITE, designated SEQ ID:14915, to the

nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46516] Another function of GAM3431 is therefore inhibition of FLJ13197 (Accession NP_078890.1) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13197.

[46517] FLJ32191 (Accession NP_653290.2) is another GAM3431 target gene, herein designated TARGET GENE. FLJ32191 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32191, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32191 BINDING SITE, designated SEQ ID:4685, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46518] Another function of GAM3431 is therefore inhibition of FLJ32191 (Accession NP_653290.2) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32191.

[46519] FLJ33918 (Accession NP_689620.1) is another GAM3431

target gene, herein designated TARGET GENE. FLJ33918 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ33918, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ33918 BINDING SITE, designated SEQ ID:9000, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46520] Another function of GAM3431 is therefore inhibition of FLJ33918 (Accession NP_689620.1) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ33918.

[46521] FLJ40298 (Accession XP_059377.5) is another GAM3431 target gene, herein designated TARGET GENE. FLJ40298 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ40298, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ40298 BINDING SITE, designated SEQ ID:6666, to the nucleotide sequence of GAM3431 RNA, herein designated

GAM RNA, also designated SEQ ID:356.

[46522] Another function of GAM3431 is therefore inhibition of FLJ40298 (Accession XP_059377.5) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ40298.

[46523] Forkhead box p1 (FOXP1, Accession NP_116071.2) is another GAM3431 target gene, herein designated TARGET GENE. FOXP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FOXP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FOXP1 BINDING SITE, designated SEQ ID:7666, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46524] Another function of GAM3431 is therefore inhibition of Forkhead box p1 (FOXP1, Accession NP_116071.2) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FOXP1.

[46525] HSPC177 (Accession NP_057494.2) is another GAM3431 target gene, herein designated TARGET GENE. HSPC177

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HSPC177, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSPC177 BINDING SITE, designated SEQ ID:19777, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46526] Another function of GAM3431 is therefore inhibition of HSPC177 (Accession NP_057494.2) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSPC177.

[46527] KIAA1155 (Accession XP_030864.2) is another GAM3431 target gene, herein designated TARGET GENE. KIAA1155 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1155, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1155 BINDING SITE, designated SEQ ID:2654, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46528] Another function of GAM3431 is therefore inhibition of KIAA1155 (Accession XP_030864.2) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1155.

[46529] KIAA1432 (Accession XP_039698.3) is another GAM3431 target gene, herein designated TARGET GENE. KIAA1432 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1432, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1432 BINDING SITE, designated SEQ ID:18507, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46530] Another function of GAM3431 is therefore inhibition of KIAA1432 (Accession XP_039698.3) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1432.

[46531] KIAA1576 (Accession NP_065978.1) is another GAM3431 target gene, herein designated TARGET GENE. KIAA1576 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by KIAA1576, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1576 BINDING SITE, designated SEQ ID:4405, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46532] Another function of GAM3431 is therefore inhibition of KIAA1576 (Accession NP_065978.1) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1576.

[46533] KIAA1587 (Accession NP_065983.1) is another GAM3431 target gene, herein designated TARGET GENE. KIAA1587 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA1587, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1587 BINDING SITE, designated SEQ ID:10648, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46534] Another function of GAM3431 is therefore inhibition of

KIAA1587 (Accession NP_065983.1) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1587.

[46535] KIAA1673 (Accession XP_047672.4) is another GAM3431 target gene, herein designated TARGET GENE. KIAA1673 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1673, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1673 BINDING SITE, designated SEQ ID:17033, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46536] Another function of GAM3431 is therefore inhibition of KIAA1673 (Accession XP_047672.4) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1673.

[46537] Kelch-like 3 (drosophila) (KLHL3, Accession NP_059111.1) is another GAM3431 target gene, herein designated TARGET GENE. KLHL3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

KLHL3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KLHL3 BINDING SITE, designated SEQ ID:2902, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46538] Another function of GAM3431 is therefore inhibition of Kelch-like 3 (drosophila) (KLHL3, Accession NP_059111.1) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KLHL3.

[46539] LOC126669 (Accession XP_060121.4) is another GAM3431 target gene, herein designated TARGET GENE. LOC126669 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC126669, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC126669 BINDING SITE, designated SEQ ID:8765, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46540] Another function of GAM3431 is therefore inhibition of LOC126669 (Accession XP_060121.4) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC126669.

[46541] LOC144874 (Accession XP_096696.1) is another GAM3431 target gene, herein designated TARGET GENE. LOC144874 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC144874, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144874 BINDING SITE, designated SEQ ID:552, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46542] Another function of GAM3431 is therefore inhibition of LOC144874 (Accession XP_096696.1) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144874.

[46543] LOC150587 (Accession XP_097917.1) is another GAM3431 target gene, herein designated TARGET GENE.

LOC150587 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC150587, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150587 BINDING SITE, designated SEQ ID:6328, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46544] Another function of GAM3431 is therefore inhibition of LOC150587 (Accession XP_097917.1) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150587.

[46545] LOC254532 (Accession XP_172961.1) is another GAM3431 target gene, herein designated TARGET GENE. LOC254532 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC254532, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC254532 BINDING SITE, designated SEQ ID:18418, to the nucleotide sequence of

GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46546] Another function of GAM3431 is therefore inhibition of LOC254532 (Accession XP_172961.1) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC254532.

[46547] LOC283053 (Accession XP_210869.1) is another GAM3431 target gene, herein designated TARGET GENE. LOC283053 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283053, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283053 BINDING SITE, designated SEQ ID:6480, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46548] Another function of GAM3431 is therefore inhibition of LOC283053 (Accession XP_210869.1) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283053.

[46549] LOC284317 (Accession XP_209162.1) is another GAM3431 target gene, herein designated TARGET GENE. LOC284317 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284317, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284317 BINDING SITE, designated SEQ ID:4230, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46550] Another function of GAM3431 is therefore inhibition of LOC284317 (Accession XP_209162.1) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284317.

[46551] LOC284325 (Accession XP_209143.1) is another GAM3431 target gene, herein designated TARGET GENE. LOC284325 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284325, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC284325 BINDING SITE, designated SEQ ID:10520, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46552] Another function of GAM3431 is therefore inhibition of LOC284325 (Accession XP_209143.1) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284325.

[46553] LOC285082 (Accession XP_211759.1) is another GAM3431 target gene, herein designated TARGET GENE. LOC285082 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285082, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285082 BINDING SITE, designated SEQ ID:19819, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46554] Another function of GAM3431 is therefore inhibition of LOC285082 (Accession XP_211759.1) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC285082.

[46555] LOC285147 (Accession XP_211784.1) is another GAM3431 target gene, herein designated TARGET GENE. LOC285147 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285147, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285147 BINDING SITE, designated SEQ ID:6394, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46556] Another function of GAM3431 is therefore inhibition of LOC285147 (Accession XP_211784.1) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285147.

[46557] LOC286416 (Accession XP_210041.1) is another GAM3431 target gene, herein designated TARGET GENE. LOC286416 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286416, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286416 BINDING SITE, designated SEQ ID:494, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46558] Another function of GAM3431 is therefore inhibition of LOC286416 (Accession XP_210041.1) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286416.

[46559] LOC339987 (Accession XP_295123.1) is another GAM3431 target gene, herein designated TARGET GENE. LOC339987 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339987, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339987 BINDING SITE, designated SEQ ID:6821, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46560] Another function of GAM3431 is therefore inhibition of

LOC339987 (Accession XP_295123.1) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339987.

[46561] MGC24180 (Accession NP_689565.1) is another GAM3431 target gene, herein designated TARGET GENE. MGC24180 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC24180, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC24180 BINDING SITE, designated SEQ ID:15915, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46562] Another function of GAM3431 is therefore inhibition of MGC24180 (Accession NP_689565.1) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC24180.

[46563] MGC50559 (Accession NP_776163.1) is another GAM3431 target gene, herein designated TARGET GENE. MGC50559 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC50559, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC50559 BINDING SITE, designated SEQ ID:4039, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46564] Another function of GAM3431 is therefore inhibition of MGC50559 (Accession NP_776163.1) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC50559.

[46565] Pim-2 oncogene (PIM2, Accession NP_006866.1) is another GAM3431 target gene, herein designated TARGET GENE. PIM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PIM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PIM2 BINDING SITE, designated SEQ ID:2828, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46566] Another function of GAM3431 is therefore inhibition of Pim-2 oncogene (PIM2, Accession NP_006866.1) . Accord-

ingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PIM2.

[46567] Peroxisome proliferative activated receptor, delta (PPARD, Accession NP_006229.1) is another GAM3431 target gene, herein designated TARGET GENE. PPARD BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PPARD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPARD BINDING SITE, designated SEQ ID:10291, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46568] Another function of GAM3431 is therefore inhibition of Peroxisome proliferative activated receptor, delta (PPARD, Accession NP_006229.1) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPARD.

[46569] Pleckstrin homology, sec7 and coiled/coil domains 3 (PSCD3, Accession NP_004218.1) is another GAM3431 target gene, herein designated TARGET GENE. PSCD3 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by PSCD3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PSCD3 BINDING SITE, designated SEQ ID:6586, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46570] Another function of GAM3431 is therefore inhibition of Pleckstrin homology, sec7 and coiled/coil domains 3 (PSCD3, Accession NP_004218.1), a gene which regulates vesicle trafficking in eukaryotic cells. Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PSCD3.

[46571] The function of PSCD3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM650.2.Reelin (RELN, Accession NP_774959.1) is another GAM3431 target gene, herein designated TARGET GENE. RELN BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RELN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementar-

ity of the nucleotide sequences of RELN BINDING SITE, designated SEQ ID:615, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46572] Another function of GAM3431 is therefore inhibition of Reelin (RELN, Accession NP_774959.1), a gene which regulates microtubule function in neurons and neuronal migration. and therefore is associated with Norman- roberts syndrome. Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of Norman- roberts syndrome, and of other diseases and clinical conditions associated with RELN.

[46573] The function of RELN and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM700.2.Reelin (RELN, Accession NP_005036.2) is another GAM3431 target gene, herein designated TARGET GENE. RELN BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RELN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RELN BINDING SITE,

designated SEQ ID:615, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46574] Another function of GAM3431 is therefore inhibition of Reelin (RELN, Accession NP_005036.2), a gene which regulates microtubule function in neurons and neuronal migration. and therefore is associated with Norman- roberts syndrome. Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of Norman- roberts syndrome, and of other diseases and clinical conditions associated with RELN.

[46575] The function of RELN and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM700.2.Rna guanylyltransferase and 5'-phosphatase (RNGTT, Accession NP_003791.1) is another GAM3431 target gene, herein designated TARGET GENE. RNGTT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RNGTT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RNGTT BINDING SITE, designated SEQ ID:19971, to the

nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46576] Another function of GAM3431 is therefore inhibition of Rna guanylyltransferase and 5'-phosphatase (RNGTT, Accession NP_003791.1), a gene which is an MRNA capping enzyme; bifunctional enzyme containing both 5'- triphosphatase and mRNA guanylyltransferase activity. Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNGTT.

[46577] The function of RNGTT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM475.2.RTKN2 (Accession NP_660350.2) is another GAM3431 target gene, herein designated TARGET GENE. RTKN2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RTKN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RTKN2 BINDING SITE, designated SEQ ID:8705, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46578] Another function of GAM3431 is therefore inhibition of RTKN2 (Accession NP_660350.2) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RTKN2.

[46579] Solute carrier family 25 (mitochondrial carrier, aralar), member 12 (SLC25A12, Accession NP_003696.2) is another GAM3431 target gene, herein designated TARGET GENE. SLC25A12 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC25A12, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC25A12 BINDING SITE, designated SEQ ID:801, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46580] Another function of GAM3431 is therefore inhibition of Solute carrier family 25 (mitochondrial carrier, aralar), member 12 (SLC25A12, Accession NP_003696.2), a gene which is a calcium - dependent mitochondrial solute carrier.may have a function in the urea cycle (by similarity). Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC25A12.

[46581] The function of SLC25A12 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM522.2.SNX16 (Accession NP_071416.2) is another GAM3431 target gene, herein designated TARGET GENE. SNX16 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SNX16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNX16 BINDING SITE, designated SEQ ID:9454, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46582] Another function of GAM3431 is therefore inhibition of SNX16 (Accession NP_071416.2) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNX16.

[46583] SNX16 (Accession NP_690049.1) is another GAM3431 target gene, herein designated TARGET GENE. SNX16 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SNX16, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNX16 BINDING SITE, designated SEQ ID:9454, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46584] Another function of GAM3431 is therefore inhibition of SNX16 (Accession NP_690049.1) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNX16.

[46585] SNX16 (Accession NP_690050.1) is another GAM3431 target gene, herein designated TARGET GENE. SNX16 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SNX16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNX16 BINDING SITE, designated SEQ ID:9454, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46586] Another function of GAM3431 is therefore inhibition of SNX16 (Accession NP_690050.1) . Accordingly, utilities of

GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNX16.

[46587] SRGAP2 (Accession NP_055665.1) is another GAM3431 target gene, herein designated TARGET GENE. SRGAP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SRGAP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SRGAP2 BINDING SITE, designated SEQ ID:5806, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46588] Another function of GAM3431 is therefore inhibition of SRGAP2 (Accession NP_055665.1) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SRGAP2.

[46589] T-box 4 (TBX4, Accession NP_060958.2) is another GAM3431 target gene, herein designated TARGET GENE. TBX4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TBX4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of TBX4 BINDING SITE, designated SEQ ID:19579, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46590] Another function of GAM3431 is therefore inhibition of T-box 4 (TBX4, Accession NP_060958.2) . Accordingly, utilities of GAM3431 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TBX4.

[46591] Zinc finger protein 183-like 1 (ZNF183L1, Accession NP_849192.1) is another GAM3431 target gene, herein designated TARGET GENE. ZNF183L1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF183L1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF183L1 BINDING SITE, designated SEQ ID:13659, to the nucleotide sequence of GAM3431 RNA, herein designated GAM RNA, also designated SEQ ID:356.

[46592] Another function of GAM3431 is therefore inhibition of Zinc finger protein 183-like 1 (ZNF183L1, Accession NP_849192.1) . Accordingly, utilities of GAM3431 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF183L1.

[46593]

[46594] Fig. 8 further provides a conceptual description of a novel bioinformatically detected of the present invention, referred to here as Genomic Address Messenger 3499 (GAM3499), which modulates expression of respective target genes thereof, the function and utility of which target genes is known in the art.

[46595] GAM3499 is a novel bioinformatically detected regulatory, non protein coding, micro RNA (miRNA) gene. The method by which GAM3499 was detected is described hereinabove with reference to Figs. 8-15.

[46596] GAM3499 gene, herein designated GAM GENE, and GAM3499 target gene, herein designated TARGET GENE, are human genes contained in the human genome.

[46597] GAM3499 gene encodes a GAM3499 precursor RNA, herein designated GAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, GAM3499 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of GAM3499 precursor RNA is designated SEQ ID:38, and is provided hereinbelow with reference to the

sequence listing part.

[46598] GAM3499 precursor RNA folds onto itself, forming GAM3499 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[46599] GAM3499 precursor RNA folds onto itself, forming GAM3499 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[46600] Nucleotide sequence of GAM3499 precursor RNA, designated SEQ-ID: 38, and a schematic representation of a predicted secondary folding of GAM3499 folded precursor RNA are further described with reference to Table 2,

hereby incorporated by reference.

[46601] An enzyme complex designated DICER COMPLEX, `dices` the GAM3499 folded precursor RNA into GAM3499 RNA, herein designated GAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy Group: A) nucleotide sequence of GAM3499 RNA is designated SEQ ID:226, and is provided hereinbelow with references to the sequence listing part and Table 3, hereby incorporated by reference.

[46602] GAM3499 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM3499 target RNA, herein designated GAM TARGET RNA. GAM3499 target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[46603] GAM3499 RNA, herein designated GAM RNA, binds complementarily to one or more target binding sites located in untranslated regions of GAM3499 target RNA, herein des-

ignated GAM TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of GAM3499 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the target binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limiting GAM3499 RNA may have a different number of target binding sites in untranslated regions of a GAM3499 target RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3`UTR region, this is meant as an example only these target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[46604] The complementary binding of GAM3499 RNA, herein designated GAM RNA, to target binding sites on GAM3499 target RNA, herein designated GAM TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM3499 target RNA into GAM3499 target protein, herein designated GAM TARGET PROTEIN. GAM target protein is therefore outlined by a broken line.

[46605] It is appreciated that GAM3499 target gene, herein designated TARGET GENE, in fact represents a plurality of GAM3499 target genes. The mRNA of each one of this plurality of GAM3499 target genes comprises one or more target binding sites, each having a nucleotide sequence which is at least partly complementary to GAM3499 RNA, herein designated GAM RNA, and which when bound by GAM3499 RNA causes inhibition of translation of respective one or more GAM3499 target proteins.

[46606] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 8 with specific reference to translational inhibition exerted by GAM3499 gene, herein designated GAM GENE, on one or more GAM3499 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have

not yet been found (Ruvkun G., Perspective: Glimpses of a tiny RNA world, Science 294,779 (2001)).

[46607] It is appreciated that specific functions and accordingly utilities of GAM3499 correlate with, and may be deduced from, the identity of the target genes which GAM3499 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[46608]

[46609]

[46610] Agmatine ureohydrolase (agmatinase) (AGMAT, Accession NP_079034.2) is a GAM3499 target gene, herein designated TARGET GENE. AGMAT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by AGMAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AGMAT BINDING SITE, designated SEQ ID:17623, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46611] A function of GAM3499 is therefore inhibition of Agmatine ureohydrolase (agmatinase) (AGMAT, Accession

NP_079034.2) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AGMAT.

[46612] BTBD9 (Accession NP_689946.1) is another GAM3499 target gene, herein designated TARGET GENE. BTBD9 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BTBD9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BTBD9 BINDING SITE, designated SEQ ID:1931, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46613] Another function of GAM3499 is therefore inhibition of BTBD9 (Accession NP_689946.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BTBD9.

[46614] C14orf117 (Accession NP_061148.1) is another GAM3499 target gene, herein designated TARGET GENE. C14orf117 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C14orf117, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of C14orf117 BINDING SITE, designated SEQ ID:9472, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46615] Another function of GAM3499 is therefore inhibition of C14orf117 (Accession NP_061148.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C14orf117.

[46616] Chromosome 1 open reading frame 24 (C1orf24, Accession NP_443198.1) is another GAM3499 target gene, herein designated TARGET GENE. C1orf24 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by C1orf24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C1orf24 BINDING SITE, designated SEQ ID:18867, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46617] Another function of GAM3499 is therefore inhibition of Chromosome 1 open reading frame 24 (C1orf24, Accession NP_443198.1) . Accordingly, utilities of GAM3499 in-

clude diagnosis, prevention and treatment of diseases and clinical conditions associated with C1orf24.

[46618] Cyclin d2 (CCND2, Accession NP_001750.1) is another GAM3499 target gene, herein designated TARGET GENE. CCND2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CCND2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCND2 BINDING SITE, designated SEQ ID:10931, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46619] Another function of GAM3499 is therefore inhibition of Cyclin d2 (CCND2, Accession NP_001750.1), a gene which is essential for the control of the cell cycle at the g1/s (start) transition. Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCND2.

[46620] The function of CCND2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.Cyclin-dependent kinase inhibitor 2b (p15, inhibits cdk4) (CDKN2B, Accession NP_511042.1) is an-

other GAM3499 target gene, herein designated TARGET GENE. CDKN2B BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CDKN2B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDKN2B BINDING SITE, designated SEQ ID:7140, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46621] Another function of GAM3499 is therefore inhibition of Cyclin-dependent kinase inhibitor 2b (p15, inhibits cdk4) (CDKN2B, Accession NP_511042.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDKN2B.

[46622] Cyclin-dependent kinase inhibitor 2b (p15, inhibits cdk4) (CDKN2B, Accession NP_004927.2) is another GAM3499 target gene, herein designated TARGET GENE. CDKN2B BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CDKN2B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDKN2B BINDING SITE, designated SEQ ID:7140, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46623] Another function of GAM3499 is therefore inhibition of Cyclin-dependent kinase inhibitor 2b (p15, inhibits cdk4) (CDKN2B, Accession NP_004927.2) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDKN2B.

[46624] CGI-31 (Accession NP_057043.1) is another GAM3499 target gene, herein designated TARGET GENE. CGI-31 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CGI-31, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CGI-31 BINDING SITE, designated SEQ ID:16300, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46625] Another function of GAM3499 is therefore inhibition of CGI-31 (Accession NP_057043.1) . Accordingly, utilities of

GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CGI-31.

[46626] CHD6 (Accession NP_115597.3) is another GAM3499 target gene, herein designated TARGET GENE. CHD6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CHD6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CHD6 BINDING SITE, designated SEQ ID:11177, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46627] Another function of GAM3499 is therefore inhibition of CHD6 (Accession NP_115597.3) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CHD6.

[46628] Chloride channel 6 (CLCN6, Accession NP_068504.1) is another GAM3499 target gene, herein designated TARGET GENE. CLCN6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CLCN6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of CLCN6 BINDING SITE, designated SEQ ID:10812, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46629] Another function of GAM3499 is therefore inhibition of Chloride channel 6 (CLCN6, Accession NP_068504.1), a gene which is a voltage- gated chloride channel. Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLCN6.

[46630] The function of CLCN6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM40.1.Chloride channel 6 (CLCN6, Accession NP_001277.1) is another GAM3499 target gene, herein designated TARGET GENE. CLCN6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CLCN6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLCN6 BINDING SITE, designated SEQ ID:10812, to the nucleotide sequence of GAM3499 RNA, herein designated

GAM RNA, also designated SEQ ID:226.

[46631] Another function of GAM3499 is therefore inhibition of Chloride channel 6 (CLCN6, Accession NP_001277.1), a gene which is a voltage- gated chloride channel. Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLCN6.

[46632] The function of CLCN6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM40.1.Chloride channel 6 (CLCN6, Accession NP_068505.1) is another GAM3499 target gene, herein designated TARGET GENE. CLCN6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CLCN6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLCN6 BINDING SITE, designated SEQ ID:10812, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46633] Another function of GAM3499 is therefore inhibition of Chloride channel 6 (CLCN6, Accession NP_068505.1), a

gene which is a voltage- gated chloride channel. Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLCN6.

[46634] The function of CLCN6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM40.1.Chloride channel 6 (CLCN6, Accession NP_068503.1) is another GAM3499 target gene, herein designated TARGET GENE. CLCN6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CLCN6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLCN6 BINDING SITE, designated SEQ ID:10812, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46635] Another function of GAM3499 is therefore inhibition of Chloride channel 6 (CLCN6, Accession NP_068503.1), a gene which is a voltage- gated chloride channel. Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associ-

ated with CLCN6.

[46636] The function of CLCN6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM40.1.Claudin 1 (CLDN1, Accession NP_066924.1) is another GAM3499 target gene, herein designated TARGET GENE. CLDN1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CLDN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLDN1 BINDING SITE, designated SEQ ID:19530, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46637] Another function of GAM3499 is therefore inhibition of Claudin 1 (CLDN1, Accession NP_066924.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLDN1.

[46638] CYP19A1 (Accession NP_112503.1) is another GAM3499 target gene, herein designated TARGET GENE. CYP19A1 BINDING SITE is a target binding site found in the 3` un-

translated region of multiple transcripts of mRNA encoded by CYP19A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYP19A1 BINDING SITE, designated SEQ ID:13808, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46639] Another function of GAM3499 is therefore inhibition of CYP19A1 (Accession NP_112503.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYP19A1.

[46640] CYP19A1 (Accession NP_000094.2) is another GAM3499 target gene, herein designated TARGET GENE. CYP19A1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CYP19A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYP19A1 BINDING SITE, designated SEQ ID:13808, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ

ID:226.

[46641] Another function of GAM3499 is therefore inhibition of CYP19A1 (Accession NP_000094.2) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYP19A1.

[46642] Diaphanous homolog 2 (drosophila) (DIAPH2, Accession NP_006720.1) is another GAM3499 target gene, herein designated TARGET GENE. DIAPH2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DIAPH2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DIAPH2 BINDING SITE, designated SEQ ID:9117, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46643] Another function of GAM3499 is therefore inhibition of Diaphanous homolog 2 (drosophila) (DIAPH2, Accession NP_006720.1), a gene which may affect in oogenesis and therefore may be associated with Premature ovarian failure . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of Premature ovarian failure .,

and of other diseases and clinical conditions associated with DIAPH2.

[46644] The function of DIAPH2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.1.DKFZp434E0519 (Accession NP_115623.1) is another GAM3499 target gene, herein designated TARGET GENE. DKFZp434E0519 BINDING SITE1 and DKFZp434E0519 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DKFZp434E0519, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp434E0519 BINDING SITE1 and DKFZp434E0519 BINDING SITE2, designated SEQ ID:2462 and SEQ ID:3588 respectively, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46645] Another function of GAM3499 is therefore inhibition of DKFZp434E0519 (Accession NP_115623.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp434E0519.

[46646] DKFZP434G072 (Accession NP_115525.1) is another GAM3499 target gene, herein designated TARGET GENE. DKFZP434G072 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP434G072, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434G072 BINDING SITE, designated SEQ ID:14688, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46647] Another function of GAM3499 is therefore inhibition of DKFZP434G072 (Accession NP_115525.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434G072.

[46648] DKFZP434I092 (Accession NP_056483.1) is another GAM3499 target gene, herein designated TARGET GENE. DKFZP434I092 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP434I092, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of DKFZP434I092 BINDING SITE, designated SEQ ID:4289, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46649] Another function of GAM3499 is therefore inhibition of DKFZP434I092 (Accession NP_056483.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434I092.

[46650] DKFZP564M182 (Accession XP_085525.3) is another GAM3499 target gene, herein designated TARGET GENE. DKFZP564M182 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP564M182, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP564M182 BINDING SITE, designated SEQ ID:4069, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46651] Another function of GAM3499 is therefore inhibition of DKFZP564M182 (Accession XP_085525.3) . Accordingly, utilities of GAM3499 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with DKFZP564M182.

[46652] DKFZp762C1112 (Accession XP_095568.5) is another GAM3499 target gene, herein designated TARGET GENE. DKFZp762C1112 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp762C1112, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp762C1112 BINDING SITE, designated SEQ ID:964, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46653] Another function of GAM3499 is therefore inhibition of DKFZp762C1112 (Accession XP_095568.5) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp762C1112.

[46654] DKFZP762N2316 (Accession XP_040560.4) is another GAM3499 target gene, herein designated TARGET GENE. DKFZP762N2316 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DKFZP762N2316, corresponding to

a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP762N2316 BINDING SITE, designated SEQ ID:10932, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46655] Another function of GAM3499 is therefore inhibition of DKFZP762N2316 (Accession XP_040560.4) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP762N2316.

[46656] FLJ12892 (Accession NP_073594.2) is another GAM3499 target gene, herein designated TARGET GENE. FLJ12892 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ12892, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12892 BINDING SITE, designated SEQ ID:18919, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46657] Another function of GAM3499 is therefore inhibition of FLJ12892 (Accession NP_073594.2) . Accordingly, utilities

of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12892.

[46658] FLJ13456 (Accession XP_038291.5) is another GAM3499 target gene, herein designated TARGET GENE. FLJ13456 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13456, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13456 BINDING SITE, designated SEQ ID:12797, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46659] Another function of GAM3499 is therefore inhibition of FLJ13456 (Accession XP_038291.5) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13456.

[46660] FLJ20582 (Accession XP_090970.4) is another GAM3499 target gene, herein designated TARGET GENE. FLJ20582 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ20582, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20582 BINDING SITE, designated SEQ ID:12014, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46661] Another function of GAM3499 is therefore inhibition of FLJ20582 (Accession XP_090970.4) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20582.

[46662] FLJ23447 (Accession NP_079101.1) is another GAM3499 target gene, herein designated TARGET GENE. FLJ23447 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23447, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23447 BINDING SITE, designated SEQ ID:18407, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46663] Another function of GAM3499 is therefore inhibition of FLJ23447 (Accession NP_079101.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ23447.

[46664] FLJ23537 (Accession NP_079165.1) is another GAM3499 target gene, herein designated TARGET GENE. FLJ23537 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23537, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23537 BINDING SITE, designated SEQ ID:18841, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46665] Another function of GAM3499 is therefore inhibition of FLJ23537 (Accession NP_079165.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23537.

[46666] FLJ30681 (Accession XP_166291.1) is another GAM3499 target gene, herein designated TARGET GENE. FLJ30681 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ30681, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ30681 BINDING SITE, designated SEQ ID:16626, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46667] Another function of GAM3499 is therefore inhibition of FLJ30681 (Accession XP_166291.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ30681.

[46668] FLJ31208 (Accession NP_694568.1) is another GAM3499 target gene, herein designated TARGET GENE. FLJ31208 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ31208, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31208 BINDING SITE, designated SEQ ID:5760, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46669] Another function of GAM3499 is therefore inhibition of FLJ31208 (Accession NP_694568.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ31208.

[46670] FLJ35693 (Accession NP_694972.2) is another GAM3499 target gene, herein designated TARGET GENE. FLJ35693 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ35693, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ35693 BINDING SITE, designated SEQ ID:7369, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46671] Another function of GAM3499 is therefore inhibition of FLJ35693 (Accession NP_694972.2) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ35693.

[46672] FLJ36754 (Accession NP_776190.1) is another GAM3499 target gene, herein designated TARGET GENE. FLJ36754 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ36754, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ36754 BINDING SITE, designated SEQ ID:7444, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46673] Another function of GAM3499 is therefore inhibition of FLJ36754 (Accession NP_776190.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ36754.

[46674] FLJ37131 (Accession NP_775958.1) is another GAM3499 target gene, herein designated TARGET GENE. FLJ37131 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ37131, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ37131 BINDING SITE, designated SEQ ID:16721, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46675] Another function of GAM3499 is therefore inhibition of FLJ37131 (Accession NP_775958.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ37131.

[46676] Glycoprotein 2 (zymogen granule membrane) (GP2, Accession NP_001493.1) is another GAM3499 target gene, herein designated TARGET GENE. GP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GP2 BINDING SITE, designated SEQ ID:3890, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46677] Another function of GAM3499 is therefore inhibition of Glycoprotein 2 (zymogen granule membrane) (GP2, Accession NP_001493.1), a gene which expresses in the secretory granule of the exocrine pancreas. Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GP2.

[46678] The function of GP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.1.G protein-coupled receptor 105 (GPR105, Accession NP_055694.1) is another GAM3499 target gene,

herein designated TARGET GENE. GPR105 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GPR105, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPR105 BINDING SITE, designated SEQ ID:7994, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46679] Another function of GAM3499 is therefore inhibition of G protein-coupled receptor 105 (GPR105, Accession NP_055694.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPR105.

[46680] Glutamate receptor, ionotropic, n-methyl-d-aspartate 3a (GRIN3A, Accession NP_597702.1) is another GAM3499 target gene, herein designated TARGET GENE. GRIN3A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GRIN3A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GRIN3A BINDING SITE, designated SEQ ID:19610, to the

nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46681] Another function of GAM3499 is therefore inhibition of Glutamate receptor, ionotropic, n-methyl-d-aspartate 3a (GRIN3A, Accession NP_597702.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GRIN3A.

[46682] High-mobility group 20a (HMG20A, Accession NP_060670.1) is another GAM3499 target gene, herein designated TARGET GENE. HMG20A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HMG20A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HMG20A BINDING SITE, designated SEQ ID:17461, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46683] Another function of GAM3499 is therefore inhibition of High-mobility group 20a (HMG20A, Accession NP_060670.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with HMG20A.

[46684] Heterogeneous nuclear ribonucleoprotein a0 (HNRPA0, Accession NP_006796.1) is another GAM3499 target gene, herein designated TARGET GENE. HNRPA0 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HNRPA0, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HNRPA0 BINDING SITE, designated SEQ ID:10813, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46685] Another function of GAM3499 is therefore inhibition of Heterogeneous nuclear ribonucleoprotein a0 (HNRPA0, Accession NP_006796.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HNRPA0.

[46686] KIAA0514 (Accession NP_055511.1) is another GAM3499 target gene, herein designated TARGET GENE. KIAA0514 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0514, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of KIAA0514 BINDING SITE, designated SEQ ID:18061, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46687] Another function of GAM3499 is therefore inhibition of KIAA0514 (Accession NP_055511.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0514.

[46688] KIAA1735 (Accession XP_290496.1) is another GAM3499 target gene, herein designated TARGET GENE. KIAA1735 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1735, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1735 BINDING SITE, designated SEQ ID:12467, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46689] Another function of GAM3499 is therefore inhibition of KIAA1735 (Accession XP_290496.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

KIAA1735.

[46690] KIAA1985 (Accession NP_078853.1) is another GAM3499 target gene, herein designated TARGET GENE. KIAA1985 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA1985, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1985 BINDING SITE, designated SEQ ID:6965, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46691] Another function of GAM3499 is therefore inhibition of KIAA1985 (Accession NP_078853.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1985.

[46692] KIAA2024 (Accession NP_742067.1) is another GAM3499 target gene, herein designated TARGET GENE. KIAA2024 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA2024, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

KIAA2024 BINDING SITE, designated SEQ ID:18702, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46693] Another function of GAM3499 is therefore inhibition of KIAA2024 (Accession NP_742067.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA2024.

[46694] Legumain (LGMN, Accession NP_005597.2) is another GAM3499 target gene, herein designated TARGET GENE. LGMN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LGMN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LGMN BINDING SITE, designated SEQ ID:10662, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46695] Another function of GAM3499 is therefore inhibition of Legumain (LGMN, Accession NP_005597.2) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LGMN.

[46696] LOC115219 (Accession XP_055499.2) is another GAM3499 target gene, herein designated TARGET GENE. LOC115219 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC115219, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC115219 BINDING SITE, designated SEQ ID:2334, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46697] Another function of GAM3499 is therefore inhibition of LOC115219 (Accession XP_055499.2) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC115219.

[46698] LOC137485 (Accession XP_059909.1) is another GAM3499 target gene, herein designated TARGET GENE. LOC137485 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC137485, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC137485 BINDING SITE, designated SEQ ID:8695, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46699] Another function of GAM3499 is therefore inhibition of LOC137485 (Accession XP_059909.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC137485.

[46700] LOC143381 (Accession XP_084501.1) is another GAM3499 target gene, herein designated TARGET GENE. LOC143381 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC143381, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC143381 BINDING SITE, designated SEQ ID:14117, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46701] Another function of GAM3499 is therefore inhibition of LOC143381 (Accession XP_084501.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC143381.

[46702] LOC145844 (Accession XP_085255.1) is another GAM3499 target gene, herein designated TARGET GENE. LOC145844 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC145844, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145844 BINDING SITE, designated SEQ ID:4635, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46703] Another function of GAM3499 is therefore inhibition of LOC145844 (Accession XP_085255.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145844.

[46704] LOC147727 (Accession XP_085862.1) is another GAM3499 target gene, herein designated TARGET GENE. LOC147727 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC147727, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147727 BINDING SITE, designated SEQ ID:5469, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46705] Another function of GAM3499 is therefore inhibition of LOC147727 (Accession XP_085862.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147727.

[46706] LOC149371 (Accession NP_787072.1) is another GAM3499 target gene, herein designated TARGET GENE. LOC149371 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC149371, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149371 BINDING SITE, designated SEQ ID:7415, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46707] Another function of GAM3499 is therefore inhibition of

LOC149371 (Accession NP_787072.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149371.

[46708] LOC149420 (Accession NP_690048.1) is another GAM3499 target gene, herein designated TARGET GENE. LOC149420 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC149420, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149420 BINDING SITE, designated SEQ ID:2383, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46709] Another function of GAM3499 is therefore inhibition of LOC149420 (Accession NP_690048.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149420.

[46710] LOC149619 (Accession XP_097690.1) is another GAM3499 target gene, herein designated TARGET GENE. LOC149619 BINDING SITE is a target binding site found in

the 3` untranslated region of mRNA encoded by LOC149619, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149619 BINDING SITE, designated SEQ ID:5200, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46711] Another function of GAM3499 is therefore inhibition of LOC149619 (Accession XP_097690.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149619.

[46712] LOC150174 (Accession XP_086802.2) is another GAM3499 target gene, herein designated TARGET GENE. LOC150174 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC150174, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150174 BINDING SITE, designated SEQ ID:1768, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:226.

[46713] Another function of GAM3499 is therefore inhibition of LOC150174 (Accession XP_086802.2) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150174.

[46714] LOC150212 (Accession XP_086827.2) is another GAM3499 target gene, herein designated TARGET GENE. LOC150212 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC150212, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150212 BINDING SITE, designated SEQ ID:11780, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46715] Another function of GAM3499 is therefore inhibition of LOC150212 (Accession XP_086827.2) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150212.

[46716] LOC150213 (Accession XP_059324.1) is another

GAM3499 target gene, herein designated TARGET GENE. LOC150213 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC150213, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150213 BINDING SITE, designated SEQ ID:1768, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46717] Another function of GAM3499 is therefore inhibition of LOC150213 (Accession XP_059324.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150213.

[46718] LOC155081 (Accession XP_088145.2) is another GAM3499 target gene, herein designated TARGET GENE. LOC155081 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC155081, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC155081 BINDING SITE, desig-

nated SEQ ID:3019, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46719] Another function of GAM3499 is therefore inhibition of LOC155081 (Accession XP_088145.2) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC155081.

[46720] LOC157556 (Accession XP_098783.1) is another GAM3499 target gene, herein designated TARGET GENE. LOC157556 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC157556, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC157556 BINDING SITE, designated SEQ ID:4290, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46721] Another function of GAM3499 is therefore inhibition of LOC157556 (Accession XP_098783.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC157556.

[46722] LOC197201 (Accession XP_113839.2) is another GAM3499 target gene, herein designated TARGET GENE. LOC197201 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC197201, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC197201 BINDING SITE, designated SEQ ID:19865, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46723] Another function of GAM3499 is therefore inhibition of LOC197201 (Accession XP_113839.2) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC197201.

[46724] LOC200339 (Accession XP_117226.1) is another GAM3499 target gene, herein designated TARGET GENE. LOC200339 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC200339, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC200339 BINDING SITE, designated SEQ ID:2412, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46725] Another function of GAM3499 is therefore inhibition of LOC200339 (Accession XP_117226.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC200339.

[46726] LOC201510 (Accession XP_113972.1) is another GAM3499 target gene, herein designated TARGET GENE. LOC201510 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC201510, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC201510 BINDING SITE, designated SEQ ID:8805, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46727] Another function of GAM3499 is therefore inhibition of LOC201510 (Accession XP_113972.1) . Accordingly, utili-

ties of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201510.

[46728] LOC202802 (Accession XP_114560.1) is another GAM3499 target gene, herein designated TARGET GENE. LOC202802 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC202802, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC202802 BINDING SITE, designated SEQ ID:3019, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46729] Another function of GAM3499 is therefore inhibition of LOC202802 (Accession XP_114560.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC202802.

[46730] LOC256895 (Accession XP_173029.2) is another GAM3499 target gene, herein designated TARGET GENE. LOC256895 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

LOC256895, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC256895 BINDING SITE, designated SEQ ID:18534, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46731] Another function of GAM3499 is therefore inhibition of LOC256895 (Accession XP_173029.2) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC256895.

[46732] LOC283038 (Accession XP_302599.1) is another GAM3499 target gene, herein designated TARGET GENE. LOC283038 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283038, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283038 BINDING SITE, designated SEQ ID:10213, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46733] Another function of GAM3499 is therefore inhibition of LOC283038 (Accession XP_302599.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283038.

[46734] LOC283070 (Accession XP_210878.1) is another GAM3499 target gene, herein designated TARGET GENE. LOC283070 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283070, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283070 BINDING SITE, designated SEQ ID:16956, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46735] Another function of GAM3499 is therefore inhibition of LOC283070 (Accession XP_210878.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283070.

[46736] LOC283655 (Accession XP_211144.1) is another GAM3499 target gene, herein designated TARGET GENE.

LOC283655 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283655, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283655 BINDING SITE, designated SEQ ID:3498, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46737] Another function of GAM3499 is therefore inhibition of LOC283655 (Accession XP_211144.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283655.

[46738] LOC283682 (Accession XP_211161.1) is another GAM3499 target gene, herein designated TARGET GENE. LOC283682 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283682, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283682 BINDING SITE, designated SEQ ID:11367, to the nucleotide sequence of

GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46739] Another function of GAM3499 is therefore inhibition of LOC283682 (Accession XP_211161.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283682.

[46740] LOC284360 (Accession XP_211433.1) is another GAM3499 target gene, herein designated TARGET GENE. LOC284360 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284360, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284360 BINDING SITE, designated SEQ ID:14189, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46741] Another function of GAM3499 is therefore inhibition of LOC284360 (Accession XP_211433.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284360.

[46742] LOC284650 (Accession XP_211571.1) is another GAM3499 target gene, herein designated TARGET GENE. LOC284650 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284650, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284650 BINDING SITE, designated SEQ ID:10960, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46743] Another function of GAM3499 is therefore inhibition of LOC284650 (Accession XP_211571.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284650.

[46744] LOC284899 (Accession XP_211680.1) is another GAM3499 target gene, herein designated TARGET GENE. LOC284899 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284899, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC284899 BINDING SITE, designated SEQ ID:2091, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46745] Another function of GAM3499 is therefore inhibition of LOC284899 (Accession XP_211680.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284899.

[46746] LOC284999 (Accession XP_211728.1) is another GAM3499 target gene, herein designated TARGET GENE. LOC284999 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284999, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284999 BINDING SITE, designated SEQ ID:15988, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46747] Another function of GAM3499 is therefore inhibition of LOC284999 (Accession XP_211728.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC284999.

[46748] LOC338564 (Accession XP_290466.1) is another GAM3499 target gene, herein designated TARGET GENE. LOC338564 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338564, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338564 BINDING SITE, designated SEQ ID:18841, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46749] Another function of GAM3499 is therefore inhibition of LOC338564 (Accession XP_290466.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338564.

[46750] LOC339083 (Accession XP_290697.2) is another GAM3499 target gene, herein designated TARGET GENE. LOC339083 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339083, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339083 BINDING SITE, designated SEQ ID:4465, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46751] Another function of GAM3499 is therefore inhibition of LOC339083 (Accession XP_290697.2) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339083.

[46752] LOC347042 (Accession XP_299969.1) is another GAM3499 target gene, herein designated TARGET GENE. LOC347042 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC347042, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC347042 BINDING SITE, designated SEQ ID:15492, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46753] Another function of GAM3499 is therefore inhibition of

LOC347042 (Accession XP_299969.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC347042.

[46754] LOC348171 (Accession XP_302672.1) is another GAM3499 target gene, herein designated TARGET GENE. LOC348171 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348171, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348171 BINDING SITE, designated SEQ ID:11763, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46755] Another function of GAM3499 is therefore inhibition of LOC348171 (Accession XP_302672.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348171.

[46756] LOC349081 (Accession XP_300935.1) is another GAM3499 target gene, herein designated TARGET GENE. LOC349081 BINDING SITE is a target binding site found in

the 3` untranslated region of mRNA encoded by LOC349081, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349081 BINDING SITE, designated SEQ ID:8658, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46757] Another function of GAM3499 is therefore inhibition of LOC349081 (Accession XP_300935.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349081.

[46758] LOC349094 (Accession XP_300945.1) is another GAM3499 target gene, herein designated TARGET GENE. LOC349094 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC349094, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349094 BINDING SITE, designated SEQ ID:3536, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:226.

[46759] Another function of GAM3499 is therefore inhibition of LOC349094 (Accession XP_300945.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349094.

[46760] LOC349097 (Accession XP_300940.1) is another GAM3499 target gene, herein designated TARGET GENE. LOC349097 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC349097, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349097 BINDING SITE, designated SEQ ID:3536, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46761] Another function of GAM3499 is therefore inhibition of LOC349097 (Accession XP_300940.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349097.

[46762] LOC349138 (Accession XP_300960.1) is another

GAM3499 target gene, herein designated TARGET GENE. LOC349138 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC349138, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349138 BINDING SITE, designated SEQ ID:3536, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46763] Another function of GAM3499 is therefore inhibition of LOC349138 (Accession XP_300960.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349138.

[46764] LOC90826 (Accession NP_612373.1) is another GAM3499 target gene, herein designated TARGET GENE. LOC90826 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC90826, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90826 BINDING SITE, designated SEQ ID:8249, to the

nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46765] Another function of GAM3499 is therefore inhibition of LOC90826 (Accession NP_612373.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90826.

[46766] LOC92912 (Accession NP_775740.1) is another GAM3499 target gene, herein designated TARGET GENE. LOC92912 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC92912, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC92912 BINDING SITE, designated SEQ ID:16021, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46767] Another function of GAM3499 is therefore inhibition of LOC92912 (Accession NP_775740.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92912.

[46768] Leucine-rich repeat protein, neuronal 1 (LRRN1, Accession

NP_065924.1) is another GAM3499 target gene, herein designated TARGET GENE. LRRN1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LRRN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LRRN1 BINDING SITE, designated SEQ ID:7636, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46769] Another function of GAM3499 is therefore inhibition of Leucine-rich repeat protein, neuronal 1 (LRRN1, Accession NP_065924.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LRRN1.

[46770] Leucine zipper transcription factor-like 1 (LZTFL1, Accession NP_065080.1) is another GAM3499 target gene, herein designated TARGET GENE. LZTFL1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LZTFL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LZTFL1 BINDING

SITE, designated SEQ ID:4713, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46771] Another function of GAM3499 is therefore inhibition of Leucine zipper transcription factor-like 1 (LZTFL1, Accession NP_065080.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LZTFL1.

[46772] Mcf.2 cell line derived transforming sequence (MCF2, Accession NP_005360.2) is another GAM3499 target gene, herein designated TARGET GENE. MCF2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MCF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MCF2 BINDING SITE, designated SEQ ID:17926, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46773] Another function of GAM3499 is therefore inhibition of Mcf.2 cell line derived transforming sequence (MCF2, Accession NP_005360.2), a gene which Cytoplasmic oncoprotein similar to vimentin and therefore may be associ-

ated with B- cell lymphoma (dbl) oncogene. Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of B- cell lymphoma (dbl) oncogene., and of other diseases and clinical conditions associated with MCF2.

[46774] The function of MCF2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM619.1.MGC14836 (Accession NP_219480.1) is another GAM3499 target gene, herein designated TARGET GENE. MGC14836 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC14836, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC14836 BINDING SITE, designated SEQ ID:6981, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46775] Another function of GAM3499 is therefore inhibition of MGC14836 (Accession NP_219480.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

MGC14836.

[46776] Membrane protein, palmitoylated 3 (maguk p55 subfamily member 3) (MPP3, Accession NP_001923.2) is another GAM3499 target gene, herein designated TARGET GENE. MPP3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MPP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MPP3 BINDING SITE, designated SEQ ID:6425, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46777] Another function of GAM3499 is therefore inhibition of Membrane protein, palmitoylated 3 (maguk p55 subfamily member 3) (MPP3, Accession NP_001923.2) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MPP3.

[46778] MPPE1 (Accession NP_075563.2) is another GAM3499 target gene, herein designated TARGET GENE. MPPE1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MPPE1, corresponding to a target binding site such as BINDING SITE I, BINDING

SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MPPE1 BINDING SITE, designated SEQ ID:13939, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46779] Another function of GAM3499 is therefore inhibition of MPPE1 (Accession NP_075563.2) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MPPE1.

[46780] Myosin, heavy polypeptide 11, smooth muscle (MYH11, Accession NP_002465.1) is another GAM3499 target gene, herein designated TARGET GENE. MYH11 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MYH11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MYH11 BINDING SITE, designated SEQ ID:6924, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46781] Another function of GAM3499 is therefore inhibition of Myosin, heavy polypeptide 11, smooth muscle (MYH11, Accession NP_002465.1), a gene which is involved in

muscle contraction. and therefore may be associated with Acute myeloid leukemia. Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of Acute myeloid leukemia., and of other diseases and clinical conditions associated with MYH11.

[46782] The function of MYH11 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM291.1.Myosin, heavy polypeptide 11, smooth muscle (MYH11, Accession NP_074035.1) is another GAM3499 target gene, herein designated TARGET GENE. MYH11 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MYH11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MYH11 BINDING SITE, designated SEQ ID:6924, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46783] Another function of GAM3499 is therefore inhibition of Myosin, heavy polypeptide 11, smooth muscle (MYH11, Accession NP_074035.1), a gene which is involved in

muscle contraction. and therefore may be associated with Acute myeloid leukemia. Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of Acute myeloid leukemia., and of other diseases and clinical conditions associated with MYH11.

[46784] The function of MYH11 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM291.1.Nuclear receptor interacting protein 1 (NRIP1, Accession NP_003480.1) is another GAM3499 target gene, herein designated TARGET GENE. NRIP1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by NRIP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NRIP1 BINDING SITE, designated SEQ ID:11880, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46785] Another function of GAM3499 is therefore inhibition of Nuclear receptor interacting protein 1 (NRIP1, Accession NP_003480.1), a gene which modulates transcriptional activation by the estrogen receptor. Accordingly, utilities

of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NRIP1.

[46786] The function of NRIP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM223.1.Nuclear receptor interacting protein 1 (NRIP1, Accession XP_009699.1) is another GAM3499 target gene, herein designated TARGET GENE. NRIP1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by NRIP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NRIP1 BINDING SITE, designated SEQ ID:11880, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46787] Another function of GAM3499 is therefore inhibition of Nuclear receptor interacting protein 1 (NRIP1, Accession XP_009699.1), a gene which modulates transcriptional activation by the estrogen receptor. Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NRIP1.

[46788] The function of NRIP1 and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM223.1.Origin recognition complex, subunit 4-like (yeast) (ORC4L, Accession NP_002543.1) is another GAM3499 target gene, herein designated TARGET GENE. ORC4L BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ORC4L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ORC4L BINDING SITE, designated SEQ ID:5097, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46789] Another function of GAM3499 is therefore inhibition of Origin recognition complex, subunit 4-like (yeast) (ORC4L, Accession NP_002543.1), a gene which may be required for initiation of DNA replication and has a putative nucleotide triphosphate binding motif. Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ORC4L.

[46790] The function of ORC4L and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM203.2.Protocadherin beta 7 (PCDHB7, Accession NP_061763.1) is another GAM3499 target gene, herein designated TARGET GENE. PCDHB7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PCDHB7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHB7 BINDING SITE, designated SEQ ID:9936, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46791] Another function of GAM3499 is therefore inhibition of Protocadherin beta 7 (PCDHB7, Accession NP_061763.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHB7.

[46792] PRO0478 (Accession NP_054848.1) is another GAM3499 target gene, herein designated TARGET GENE. PRO0478 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRO0478, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of PRO0478 BINDING SITE, designated SEQ ID:2029, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46793] Another function of GAM3499 is therefore inhibition of PRO0478 (Accession NP_054848.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO0478.

[46794] Ptk2 protein tyrosine kinase 2 (PTK2, Accession NP_005598.3) is another GAM3499 target gene, herein designated TARGET GENE. PTK2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PTK2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTK2 BINDING SITE, designated SEQ ID:9167, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46795] Another function of GAM3499 is therefore inhibition of Ptk2 protein tyrosine kinase 2 (PTK2, Accession NP_005598.3), a gene which involves in intracellular sig-

nal transduction pathway and is a putative homolog of chicken focal adhesion associated kinase. Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTK2.

[46796] The function of PTK2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM65.2.Ptk2 protein tyrosine kinase 2 (PTK2, Accession NP_722560.1) is another GAM3499 target gene, herein designated TARGET GENE. PTK2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PTK2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTK2 BINDING SITE, designated SEQ ID:9167, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46797] Another function of GAM3499 is therefore inhibition of Ptk2 protein tyrosine kinase 2 (PTK2, Accession NP_722560.1), a gene which involves in intracellular signal transduction pathway and is a putative homolog of

chicken focal adhesion associated kinase. Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTK2.

[46798] The function of PTK2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM65.2.Protein tyrosine phosphatase, receptor type, c (PTPRC, Accession NP_002829.2) is another GAM3499 target gene, herein designated TARGET GENE. PTPRC BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PTPRC, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTPRC BINDING SITE, designated SEQ ID:18645, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46799] Another function of GAM3499 is therefore inhibition of Protein tyrosine phosphatase, receptor type, c (PTPRC, Accession NP_002829.2) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases

and clinical conditions associated with PTPRC.

[46800] Protein tyrosine phosphatase, receptor type, c (PTPRC, Accession NP_563579.1) is another GAM3499 target gene, herein designated TARGET GENE. PTPRC BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PTPRC, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTPRC BINDING SITE, designated SEQ ID:18645, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46801] Another function of GAM3499 is therefore inhibition of Protein tyrosine phosphatase, receptor type, c (PTPRC, Accession NP_563579.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTPRC.

[46802] Protein tyrosine phosphatase, receptor type, c (PTPRC, Accession NP_563578.1) is another GAM3499 target gene, herein designated TARGET GENE. PTPRC BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PTPRC, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTPRC BINDING SITE, designated SEQ ID:18645, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46803] Another function of GAM3499 is therefore inhibition of Protein tyrosine phosphatase, receptor type, c (PTPRC, Accession NP_563578.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTPRC.

[46804] RAD18 (Accession NP_064550.2) is another GAM3499 target gene, herein designated TARGET GENE. RAD18 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAD18, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAD18 BINDING SITE, designated SEQ ID:3162, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46805] Another function of GAM3499 is therefore inhibition of RAD18 (Accession NP_064550.2), a gene which functions with dna repair protein rad5 in error- free postreplication

dna repair and therefore may be associated with Cancer. Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of Cancer, and of other diseases and clinical conditions associated with RAD18.

[46806] The function of RAD18 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.2.SB52 (Accession NP_612208.1) is another GAM3499 target gene, herein designated TARGET GENE. SB52 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SB52, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SB52 BINDING SITE, designated SEQ ID:6196, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46807] Another function of GAM3499 is therefore inhibition of SB52 (Accession NP_612208.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SB52.

[46808] SEC15B (Accession XP_039570.3) is another GAM3499 target gene, herein designated TARGET GENE. SEC15B

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SEC15B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SEC15B BINDING SITE, designated SEQ ID:4566, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46809] Another function of GAM3499 is therefore inhibition of SEC15B (Accession XP_039570.3) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SEC15B.

[46810] SLC35E2 (Accession XP_049733.6) is another GAM3499 target gene, herein designated TARGET GENE. SLC35E2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC35E2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC35E2 BINDING SITE, designated SEQ ID:8532, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46811] Another function of GAM3499 is therefore inhibition of

SLC35E2 (Accession XP_049733.6) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC35E2.

[46812] SNX22 (Accession NP_079074.1) is another GAM3499 target gene, herein designated TARGET GENE. SNX22 BINDING SITE1 and SNX22 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by SNX22, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNX22 BINDING SITE1 and SNX22 BINDING SITE2, designated SEQ ID:7099 and SEQ ID:11732 respectively, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46813] Another function of GAM3499 is therefore inhibition of SNX22 (Accession NP_079074.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNX22.

[46814] Sprouty homolog 3 (drosophila) (SPRY3, Accession NP_005831.1) is another GAM3499 target gene, herein designated TARGET GENE. SPRY3 BINDING SITE is a target

binding site found in the 3` untranslated region of mRNA encoded by SPRY3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SPRY3 BINDING SITE, designated SEQ ID:428, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46815] Another function of GAM3499 is therefore inhibition of Sprouty homolog 3 (drosophila) (SPRY3, Accession NP_005831.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SPRY3.

[46816] Tgfb-induced factor 2 (tale family homeobox) (TGIF2, Accession NP_068581.1) is another GAM3499 target gene, herein designated TARGET GENE. TGIF2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGIF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TGIF2 BINDING SITE, designated SEQ ID:7688, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46817] Another function of GAM3499 is therefore inhibition of Tgfb-induced factor 2 (tale family homeobox) (TGIF2, Accession NP_068581.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TGIF2.

[46818] Triple homeobox 1 (TIX1, Accession NP_055850.1) is another GAM3499 target gene, herein designated TARGET GENE. TIX1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TIX1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TIX1 BINDING SITE, designated SEQ ID:17199, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46819] Another function of GAM3499 is therefore inhibition of Triple homeobox 1 (TIX1, Accession NP_055850.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TIX1.

[46820] Toll-like receptor 3 (TLR3, Accession NP_003256.1) is another GAM3499 target gene, herein designated TARGET GENE. TLR3 BINDING SITE is a target binding site found in

the 3` untranslated region of mRNA encoded by TLR3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TLR3 BINDING SITE, designated SEQ ID:13708, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46821] Another function of GAM3499 is therefore inhibition of Toll-like receptor 3 (TLR3, Accession NP_003256.1), a gene which involves in host defense against viruses. Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TLR3.

[46822] The function of TLR3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1490.1.Topoisomerase (dna) ii alpha 170kda (TOP2A, Accession NP_001058.2) is another GAM3499 target gene, herein designated TARGET GENE. TOP2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TOP2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of TOP2A BINDING SITE, designated SEQ ID:14864, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46823] Another function of GAM3499 is therefore inhibition of Topoisomerase (dna) ii alpha 170kda (TOP2A, Accession NP_001058.2) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TOP2A.

[46824] TP53BPL (Accession NP_005793.1) is another GAM3499 target gene, herein designated TARGET GENE. TP53BPL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TP53BPL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TP53BPL BINDING SITE, designated SEQ ID:1710, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46825] Another function of GAM3499 is therefore inhibition of TP53BPL (Accession NP_005793.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

TP53BPL.

[46826] VN1R1 (Accession NP_065684.1) is another GAM3499 target gene, herein designated TARGET GENE. VN1R1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by VN1R1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VN1R1 BINDING SITE, designated SEQ ID:14407, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46827] Another function of GAM3499 is therefore inhibition of VN1R1 (Accession NP_065684.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VN1R1.

[46828] Williams beuren syndrome chromosome region 19 (WBSCR19, Accession NP_778234.2) is another GAM3499 target gene, herein designated TARGET GENE. WBSCR19 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by WBSCR19, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

WBSCR19 BINDING SITE, designated SEQ ID:3019, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46829] Another function of GAM3499 is therefore inhibition of Williams beuren syndrome chromosome region 19 (WBSCR19, Accession NP_778234.2) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WB-SCR19.

[46830] Zinc finger protein 214 (ZNF214, Accession NP_037381.1) is another GAM3499 target gene, herein designated TAR-GET GENE. ZNF214 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF214, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-cleotide sequences of ZNF214 BINDING SITE, designated SEQ ID:6248, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46831] Another function of GAM3499 is therefore inhibition of Zinc finger protein 214 (ZNF214, Accession NP_037381.1) . Accordingly, utilities of GAM3499 include diagnosis,

prevention and treatment of diseases and clinical conditions associated with ZNF214.

[46832] ZNF333 (Accession NP_115809.1) is another GAM3499 target gene, herein designated TARGET GENE. ZNF333 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF333, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF333 BINDING SITE, designated SEQ ID:15527, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46833] Another function of GAM3499 is therefore inhibition of ZNF333 (Accession NP_115809.1) . Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF333.

[46834] Zinc finger protein 36 (kox 18) (ZNF36, Accession XP_168302.1) is another GAM3499 target gene, herein designated TARGET GENE. ZNF36 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF36, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF36 BINDING SITE, designated SEQ ID:10965, to the nucleotide sequence of GAM3499 RNA, herein designated GAM RNA, also designated SEQ ID:226.

[46835] Another function of GAM3499 is therefore inhibition of Zinc finger protein 36 (kox 18) (ZNF36, Accession XP_168302.1), a gene which may be involved in transcriptional regulation. Accordingly, utilities of GAM3499 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF36.

[46836] The function of ZNF36 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.1.

[46837] Fig. 8 further provides a conceptual description of a novel bioinformatically detected of the present invention, referred to here as Genomic Address Messenger 3770 (GAM3770), which modulates expression of respective target genes thereof, the function and utility of which target genes is known in the art.

[46838] GAM3770 is a novel bioinformatically detected regulatory, non protein coding, micro RNA (miRNA) gene. The method

by which GAM3770 was detected is described hereinabove with reference to Figs. 8-15.

[46839] GAM3770 gene, herein designated GAM GENE, and GAM3770 target gene, herein designated TARGET GENE, are human genes contained in the human genome.

[46840] GAM3770 gene encodes a GAM3770 precursor RNA, herein designated GAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, GAM3770 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of GAM3770 precursor RNA is designated SEQ ID:29, and is provided hereinbelow with reference to the sequence listing part.

[46841] GAM3770 precursor RNA folds onto itself, forming GAM3770 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[46842] GAM3770 precursor RNA folds onto itself, forming

GAM3770 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[46843] Nucleotide sequence of GAM3770 precursor RNA, designated SEQ-ID: 29, and a schematic representation of a predicted secondary folding of GAM3770 folded precursor RNA are further described with reference to Table 2, hereby incorporated by reference.

[46844] An enzyme complex designated DICER COMPLEX, `dices` the GAM3770 folded precursor RNA into GAM3770 RNA, herein designated GAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy Group: C) nucleotide sequence of GAM3770 RNA is designated SEQ ID:281, and is provided hereinbelow with refer-

ences to the sequence listing part and Table 3, hereby incorporated by reference.

[46845] GAM3770 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM3770 target RNA, herein designated GAM TARGET RNA. GAM3770 target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[46846] GAM3770 RNA, herein designated GAM RNA, binds complementarily to one or more target binding sites located in untranslated regions of GAM3770 target RNA, herein designated GAM TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of GAM3770 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the target binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limiting GAM3770 RNA may have a different number of target binding sites in untranslated regions of a GAM3770 target

RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3`UTR region, this is meant as an example only these target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[46847] The complementary binding of GAM3770 RNA, herein designated GAM RNA, to target binding sites on GAM3770 target RNA, herein designated GAM TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM3770 target RNA into GAM3770 target protein, herein designated GAM TARGET PROTEIN. GAM target protein is therefore outlined by a broken line.

[46848] It is appreciated that GAM3770 target gene, herein designated TARGET GENE, in fact represents a plurality of GAM3770 target genes. The mRNA of each one of this plurality of GAM3770 target genes comprises one or more target binding sites, each having a nucleotide sequence which is at least partly complementary to GAM3770 RNA, herein designated GAM RNA, and which when bound by GAM3770 RNA causes inhibition of translation of respective one or more GAM3770 target proteins.

[46849] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 8 with

specific reference to translational inhibition exerted by GAM3770 gene, herein designated GAM GENE, on one or more GAM3770 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., Perspective: Glimpses of a tiny RNA world, Science 294,779 (2001)).

[46850] It is appreciated that specific functions and accordingly utilities of GAM3770 correlate with, and may be deduced from, the identity of the target genes which GAM3770 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[46851]

[46852]

[46853] Atp-binding cassette, sub-family d (ald), member 2

(ABCD2, Accession NP_005155.1) is a GAM3770 target gene, herein designated TARGET GENE. ABCD2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ABCD2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABCD2 BINDING SITE, designated SEQ ID:19013, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46854] A function of GAM3770 is therefore inhibition of Atp-binding cassette, sub-family d (ald), member 2 (ABCD2, Accession NP_005155.1), a gene which probable transporter. and therefore may be associated with Adrenoleukodystrophy. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of Adrenoleukodystrophy, and of other diseases and clinical conditions associated with ABCD2.

[46855] The function of ABCD2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.Atp-binding cassette, sub-family f (gcn20), member 2 (ABCF2, Accession NP_009120.1) is another

GAM3770 target gene, herein designated TARGET GENE. ABCF2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ABCF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABCF2 BINDING SITE, designated SEQ ID:484, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46856] Another function of GAM3770 is therefore inhibition of Atp-binding cassette, sub-family f (gcn20), member 2 (ABCF2, Accession NP_009120.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABCF2.

[46857] Arp1 actin-related protein 1 homolog a, centractin alpha (yeast) (ACTR1A, Accession NP_005727.1) is another GAM3770 target gene, herein designated TARGET GENE. ACTR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ACTR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ACTR1A BINDING SITE, designated SEQ

ID:6045, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[46858] Another function of GAM3770 is therefore inhibition of Arp1 actin-related protein 1 homolog a, centractin alpha (yeast) (ACTR1A, Accession NP_005727.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ACTR1A.

[46859] A kinase (prka) anchor protein 2 (AKAP2, Accession NP_009134.1) is another GAM3770 target gene, herein designated TARGET GENE. AKAP2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by AKAP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AKAP2 BINDING SITE, designated SEQ ID:7250, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46860] Another function of GAM3770 is therefore inhibition of A kinase (prka) anchor protein 2 (AKAP2, Accession NP_009134.1), a gene which binds to regulatory subunit (rii) of protein kinase a. Accordingly, utilities of GAM3770

include diagnosis, prevention and treatment of diseases and clinical conditions associated with AKAP2.

[46861] The function of AKAP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM94.1.Aldehyde dehydrogenase 3 family, member a2 (ALDH3A2, Accession NP_000373.1) is another GAM3770 target gene, herein designated TARGET GENE. ALDH3A2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ALDH3A2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ALDH3A2 BINDING SITE, designated SEQ ID:15493, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46862] Another function of GAM3770 is therefore inhibition of Aldehyde dehydrogenase 3 family, member a2 (ALDH3A2, Accession NP_000373.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ALDH3A2.

[46863] Aldehyde dehydrogenase 6 family, member a1 (ALDH6A1,

Accession NP_005580.1) is another GAM3770 target gene, herein designated TARGET GENE. ALDH6A1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ALDH6A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ALDH6A1 BINDING SITE, designated SEQ ID:7652, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46864] Another function of GAM3770 is therefore inhibition of Aldehyde dehydrogenase 6 family, member a1 (ALDH6A1, Accession NP_005580.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ALDH6A1.

[46865] Aldehyde dehydrogenase 9 family, member a1 (ALDH9A1, Accession NP_000687.2) is another GAM3770 target gene, herein designated TARGET GENE. ALDH9A1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ALDH9A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ALDH9A1

BINDING SITE, designated SEQ ID:4064, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46866] Another function of GAM3770 is therefore inhibition of Aldehyde dehydrogenase 9 family, member a1 (ALDH9A1, Accession NP_000687.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ALDH9A1.

[46867] Autocrine motility factor receptor (AMFR, Accession NP_620408.1) is another GAM3770 target gene, herein designated TARGET GENE. AMFR BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by AMFR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AMFR BINDING SITE, designated SEQ ID:6822, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[46868] Another function of GAM3770 is therefore inhibition of Autocrine motility factor receptor (AMFR, Accession NP_620408.1), a gene which acts to stimulate migration of fibrosarcoma cells and therefore may be associated

with Tumors. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of Tumors, and of other diseases and clinical conditions associated with AMFR.

[46869] The function of AMFR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.Autocrine motility factor receptor (AMFR, Accession NP_001135.3) is another GAM3770 target gene, herein designated TARGET GENE. AMFR BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by AMFR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AMFR BINDING SITE, designated SEQ ID:6822, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[46870] Another function of GAM3770 is therefore inhibition of Autocrine motility factor receptor (AMFR, Accession NP_001135.3), a gene which acts to stimulate migration of fibrosarcoma cells and therefore may be associated with Tumors. Accordingly, utilities of GAM3770 include

diagnosis, prevention and treatment of Tumors, and of other diseases and clinical conditions associated with AMFR.

[46871] The function of AMFR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.Adenosine monophosphate deaminase (isoform e) (AMPD3, Accession NP_000471.1) is another GAM3770 target gene, herein designated TARGET GENE. AMPD3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by AMPD3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AMPD3 BINDING SITE, designated SEQ ID:2981, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46872] Another function of GAM3770 is therefore inhibition of Adenosine monophosphate deaminase (isoform e) (AMPD3, Accession NP_000471.1), a gene which plays a critical role in energy metabolism. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AMPD3.

[46873] The function of AMPD3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM584.1.Rac/cdc42 guanine nucleotide exchange factor (gef) 6 (ARHGEF6, Accession NP_004831.1) is another GAM3770 target gene, herein designated TARGET GENE. ARHGEF6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARHGEF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARHGEF6 BINDING SITE, designated SEQ ID:4040, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[46874] Another function of GAM3770 is therefore inhibition of Rac/cdc42 guanine nucleotide exchange factor (gef) 6 (ARHGEF6, Accession NP_004831.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARHGEF6.

[46875] ARPP-21 (Accession NP_057384.1) is another GAM3770 target gene, herein designated TARGET GENE. ARPP-21

BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ARPP-21, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARPP-21 BINDING SITE, designated SEQ ID:4251, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46876] Another function of GAM3770 is therefore inhibition of ARPP-21 (Accession NP_057384.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARPP-21.

[46877] Arylsulfatase b (ARSB, Accession NP_000037.1) is another GAM3770 target gene, herein designated TARGET GENE. ARSB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARSB BINDING SITE, designated SEQ ID:11835, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46878] Another function of GAM3770 is therefore inhibition of Arylsulfatase b (ARSB, Accession NP_000037.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARSB.

[46879] Atpase, class i, type 8b, member 2 (ATP8B2, Accession XP_290875.1) is another GAM3770 target gene, herein designated TARGET GENE. ATP8B2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ATP8B2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATP8B2 BINDING SITE, designated SEQ ID:17310, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[46880] Another function of GAM3770 is therefore inhibition of Atpase, class i, type 8b, member 2 (ATP8B2, Accession XP_290875.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP8B2.

[46881] Bai1-associated protein 2 (BAIAP2, Accession NP_059345.1) is another GAM3770 target gene, herein

designated TARGET GENE. BAIAP2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BAIAP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BAIAP2 BINDING SITE, designated SEQ ID:6156, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46882] Another function of GAM3770 is therefore inhibition of Bai1-associated protein 2 (BAIAP2, Accession NP_059345.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BAIAP2.

[46883] BCAP31 (Accession NP_005736.2) is another GAM3770 target gene, herein designated TARGET GENE. BCAP31 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BCAP31, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BCAP31 BINDING SITE, designated SEQ ID:13375, to the nucleotide sequence of GAM3770 RNA, herein designated

GAM RNA, also designated SEQ ID:281.

[46884] Another function of GAM3770 is therefore inhibition of BCAP31 (Accession NP_005736.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BCAP31.

[46885] B-cell cll/lymphoma 7a (BCL7A, Accession NP_066273.1) is another GAM3770 target gene, herein designated TARGET GENE. BCL7A BINDING SITE1 and BCL7A BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by BCL7A, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BCL7A BINDING SITE1 and BCL7A BINDING SITE2, designated SEQ ID:16792 and SEQ ID:8131 respectively, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46886] Another function of GAM3770 is therefore inhibition of B-cell cll/lymphoma 7a (BCL7A, Accession NP_066273.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BCL7A.

[46887] Baculoviral iap repeat-containing 8 (BIRC8, Accession NP_203127.2) is another GAM3770 target gene, herein designated TARGET GENE. BIRC8 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BIRC8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BIRC8 BINDING SITE, designated SEQ ID:2524, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46888] Another function of GAM3770 is therefore inhibition of Baculoviral iap repeat-containing 8 (BIRC8, Accession NP_203127.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BIRC8.

[46889] BLAME (Accession NP_064510.1) is another GAM3770 target gene, herein designated TARGET GENE. BLAME BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BLAME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BLAME

BINDING SITE, designated SEQ ID:14865, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46890] Another function of GAM3770 is therefore inhibition of BLAME (Accession NP_064510.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BLAME.

[46891] Brf2, subunit of rna polymerase iii transcription initiation factor, brf1-like (BRF2, Accession NP_060780.2) is another GAM3770 target gene, herein designated TARGET GENE. BRF2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BRF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BRF2 BINDING SITE, designated SEQ ID:4164, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46892] Another function of GAM3770 is therefore inhibition of Brf2, subunit of rna polymerase iii transcription initiation factor, brf1-like (BRF2, Accession NP_060780.2), a gene which is one of the multiple subunits of the RNA polymerase III transcription factor complex. Accordingly, utili-

ties of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BRF2.

[46893] The function of BRF2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1095.1.Bassoon (presynaptic cytomatrix protein) (BSN, Accession NP_003449.1) is another GAM3770 target gene, herein designated TARGET GENE. BSN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BSN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BSN BINDING SITE, designated SEQ ID:11733, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46894] Another function of GAM3770 is therefore inhibition of Bassoon (presynaptic cytomatrix protein) (BSN, Accession NP_003449.1), a gene which may be involved in cytomatrix organization at the site of neurotransmitter release and therefore may be associated with Multiple system atrophy (msa). Accordingly, utilities of GAM3770 include di-

agnosis, prevention and treatment of Multiple system atrophy (msa), and of other diseases and clinical conditions associated with BSN.

[46895] The function of BSN and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM146.1.Btb (poz) domain containing 6 (BTBD6, Accession NP_150374.1) is another GAM3770 target gene, herein designated TARGET GENE. BTBD6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BTBD6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BTBD6 BINDING SITE, designated SEQ ID:14701, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46896] Another function of GAM3770 is therefore inhibition of Btb (poz) domain containing 6 (BTBD6, Accession NP_150374.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BTBD6.

[46897] BZRAP1 (Accession NP_004749.1) is another GAM3770 target gene, herein designated TARGET GENE. BZRAP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BZRAP1, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BZRAP1 BINDING SITE, designated SEQ ID:7707, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[46898] Another function of GAM3770 is therefore inhibition of BZRAP1 (Accession NP_004749.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BZRAP1.

[46899] Chromosome 1 open reading frame 25 (C1orf25, Accession NP_112196.2) is another GAM3770 target gene, herein designated TARGET GENE. C1orf25 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C1orf25, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C1orf25 BINDING SITE, designated SEQ ID:8737, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46900] Another function of GAM3770 is therefore inhibition of Chromosome 1 open reading frame 25 (C1orf25, Acces-

sion NP_112196.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1orf25.

[46901] Chromosome 20 open reading frame 103 (C20orf103, Accession NP_036393.1) is another GAM3770 target gene, herein designated TARGET GENE. C20orf103 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C20orf103, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf103 BINDING SITE, designated SEQ ID:8221, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46902] Another function of GAM3770 is therefore inhibition of Chromosome 20 open reading frame 103 (C20orf103, Accession NP_036393.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf103.

[46903] Chromosome 20 open reading frame 152 (C20orf152, Accession NP_543024.1) is another GAM3770 target gene, herein designated TARGET GENE. C20orf152 BINDING SITE is a target binding site found in the 5` untranslated re-

gion of mRNA encoded by C20orf152, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf152 BINDING SITE, designated SEQ ID:9895, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46904] Another function of GAM3770 is therefore inhibition of Chromosome 20 open reading frame 152 (C20orf152, Accession NP_543024.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf152.

[46905] Chromosome 20 open reading frame 175 (C20orf175, Accession NP_543019.1) is another GAM3770 target gene, herein designated TARGET GENE. C20orf175 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by C20orf175, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf175 BINDING SITE, designated SEQ ID:13674, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46906] Another function of GAM3770 is therefore inhibition of Chromosome 20 open reading frame 175 (C20orf175, Accession NP_543019.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf175.

[46907] C20orf194 (Accession XP_045421.1) is another GAM3770 target gene, herein designated TARGET GENE. C20orf194 BINDING SITE1 and C20orf194 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by C20orf194, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf194 BINDING SITE1 and C20orf194 BINDING SITE2, designated SEQ ID:20123 and SEQ ID:12486 respectively, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46908] Another function of GAM3770 is therefore inhibition of C20orf194 (Accession XP_045421.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf194.

[46909] Chromosome 5 open reading frame 4 (C5orf4, Accession

NP_057432.1) is another GAM3770 target gene, herein designated TARGET GENE. C5orf4 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by C5orf4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C5orf4 BINDING SITE, designated SEQ ID:7312, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[46910] Another function of GAM3770 is therefore inhibition of Chromosome 5 open reading frame 4 (C5orf4, Accession NP_057432.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C5orf4.

[46911] Chromosome 5 open reading frame 4 (C5orf4, Accession NP_115761.1) is another GAM3770 target gene, herein designated TARGET GENE. C5orf4 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by C5orf4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

C5orf4 BINDING SITE, designated SEQ ID:7312, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[46912] Another function of GAM3770 is therefore inhibition of Chromosome 5 open reading frame 4 (C5orf4, Accession NP_115761.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C5orf4.

[46913] Caspase recruitment domain family, member 9 (CARD9, Accession NP_071747.2) is another GAM3770 target gene, herein designated TARGET GENE. CARD9 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CARD9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CARD9 BINDING SITE, designated SEQ ID:9215, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[46914] Another function of GAM3770 is therefore inhibition of Caspase recruitment domain family, member 9 (CARD9, Accession NP_071747.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with CARD9.

[46915] Chemokine (c-c motif) ligand 1 (CCL1, Accession NP_002972.1) is another GAM3770 target gene, herein designated TARGET GENE. CCL1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CCL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCL1 BINDING SITE, designated SEQ ID:11794, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46916] Another function of GAM3770 is therefore inhibition of Chemokine (c-c motif) ligand 1 (CCL1, Accession NP_002972.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCL1.

[46917] Chemokine (c-c motif) receptor 1 (CCR1, Accession NP_001286.1) is another GAM3770 target gene, herein designated TARGET GENE. CCR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CCR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCR1 BINDING SITE, designated SEQ ID:17877, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46918] Another function of GAM3770 is therefore inhibition of Chemokine (c-c motif) receptor 1 (CCR1, Accession NP_001286.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCR1.

[46919] Cd1a antigen, a polypeptide (CD1A, Accession NP_001754.1) is another GAM3770 target gene, herein designated TARGET GENE. CD1A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CD1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CD1A BINDING SITE, designated SEQ ID:6426, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46920] Another function of GAM3770 is therefore inhibition of Cd1a antigen, a polypeptide (CD1A, Accession

NP_001754.1), a gene which is involved in antigen presentation. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CD1A.

[46921] The function of CD1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM223.1.Cd1d antigen, d polypeptide (CD1D, Accession NP_001757.1) is another GAM3770 target gene, herein designated TARGET GENE. CD1D BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CD1D, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CD1D BINDING SITE, designated SEQ ID:3178, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[46922] Another function of GAM3770 is therefore inhibition of Cd1d antigen, d polypeptide (CD1D, Accession NP_001757.1), a gene which is a member D of the CD1 family; involved in antigen presentation . Accordingly, utilities of GAM3770 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with CD1D.

[46923] The function of CD1D and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.1.Congenital dyserythropoietic anemia, type i (CDAN1, Accession XP_085300.3) is another GAM3770 target gene, herein designated TARGET GENE. CDAN1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CDAN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDAN1 BINDING SITE, designated SEQ ID:6457, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[46924] Another function of GAM3770 is therefore inhibition of Congenital dyserythropoietic anemia, type i (CDAN1, Accession XP_085300.3) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDAN1.

[46925] Cdc42 effector protein (rho gtpase binding) 3 (CDC42EP3, Accession NP_006440.2) is another GAM3770 target gene,

herein designated TARGET GENE. CDC42EP3 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CDC42EP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDC42EP3 BINDING SITE, designated SEQ ID:19072, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[46926] Another function of GAM3770 is therefore inhibition of Cdc42 effector protein (rho gtpase binding) 3 (CDC42EP3, Accession NP_006440.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDC42EP3.

[46927] Cdc91 cell division cycle 91-like 1 (s. cerevisiae) (CDC91L1, Accession NP_536724.1) is another GAM3770 target gene, herein designated TARGET GENE. CDC91L1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CDC91L1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

CDC91L1 BINDING SITE, designated SEQ ID:3448, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46928] Another function of GAM3770 is therefore inhibition of Cdc91 cell division cycle 91-like 1 (s. cerevisiae) (CDC91L1, Accession NP_536724.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDC91L1.

[46929] Cadherin 5, type 2, ve-cadherin (vascular epithelium) (CDH5, Accession NP_001786.1) is another GAM3770 target gene, herein designated TARGET GENE. CDH5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CDH5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDH5 BINDING SITE, designated SEQ ID:10833, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46930] Another function of GAM3770 is therefore inhibition of Cadherin 5, type 2, ve-cadherin (vascular epithelium) (CDH5, Accession NP_001786.1), a gene which associates

with alpha- catenin forming a link to the cytoskeleton. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDH5.

[46931] The function of CDH5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.1.Cysteine dioxygenase, type i (CDO1, Accession NP_001792.1) is another GAM3770 target gene, herein designated TARGET GENE. CDO1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CDO1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDO1 BINDING SITE, designated SEQ ID:4009, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46932] Another function of GAM3770 is therefore inhibition of Cysteine dioxygenase, type i (CDO1, Accession NP_001792.1), a gene which is involved in degradation of cysteine to pyruvate. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and

clinical conditions associated with CDO1.

[46933] The function of CDO1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM475.1.Claudin 1 (CLDN1, Accession NP_066924.1) is another GAM3770 target gene, herein designated TARGET GENE. CLDN1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CLDN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLDN1 BINDING SITE, designated SEQ ID:17449, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46934] Another function of GAM3770 is therefore inhibition of Claudin 1 (CLDN1, Accession NP_066924.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLDN1.

[46935] cPLA2delta (Accession NP_828848.1) is another GAM3770 target gene, herein designated TARGET GENE. cPLA2delta BINDING SITE is a target binding site found in the 3` un-

translated region of multiple transcripts of mRNA encoded by cPLA2delta, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of cPLA2delta BINDING SITE, designated SEQ ID:17982, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46936] Another function of GAM3770 is therefore inhibition of cPLA2delta (Accession NP_828848.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with cPLA2delta.

[46937] cPLA2delta (Accession XP_208820.2) is another GAM3770 target gene, herein designated TARGET GENE. cPLA2delta BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by cPLA2delta, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of cPLA2delta BINDING SITE, designated SEQ ID:17982, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:281.

[46938] Another function of GAM3770 is therefore inhibition of cPLA2delta (Accession XP_208820.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with cPLA2delta.

[46939] C-reactive protein, pentraxin-related (CRP, Accession NP_000558.1) is another GAM3770 target gene, herein designated TARGET GENE. CRP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CRP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CRP BINDING SITE, designated SEQ ID:11630, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46940] Another function of GAM3770 is therefore inhibition of C-reactive protein, pentraxin-related (CRP, Accession NP_000558.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CRP.

[46941] Cofactor required for sp1 transcriptional activation, sub-

unit 2, 150kda (CRSP2, Accession NP_004220.2) is another GAM3770 target gene, herein designated TARGET GENE. CRSP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CRSP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CRSP2 BINDING SITE, designated SEQ ID:10521, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46942] Another function of GAM3770 is therefore inhibition of Cofactor required for sp1 transcriptional activation, subunit 2, 150kda (CRSP2, Accession NP_004220.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CRSP2.

[46943] Cullin 3 (CUL3, Accession NP_003581.1) is another GAM3770 target gene, herein designated TARGET GENE. CUL3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CUL3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

CUL3 BINDING SITE, designated SEQ ID:9467, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[46944] Another function of GAM3770 is therefore inhibition of Cullin 3 (CUL3, Accession NP_003581.1), a gene which may target other proteins for ubiquitin- dependent proteolysis. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CUL3.

[46945] The function of CUL3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM32.1.Cytoplasmic linker 2 (CYLN2, Accession NP_003379.2) is another GAM3770 target gene, herein designated TARGET GENE. CYLN2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CYLN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYLN2 BINDING SITE, designated SEQ ID:9937, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[46946] Another function of GAM3770 is therefore inhibition of Cytoplasmic linker 2 (CYLN2, Accession NP_003379.2), a gene which associates with microtubules and dendritic lamellar bodies. and therefore may be associated with Williams- beuren syndrome. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of Williams- beuren syndrome, and of other diseases and clinical conditions associated with CYLN2.

[46947] The function of CYLN2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM330.2.Cytoplasmic linker 2 (CYLN2, Accession NP_115797.1) is another GAM3770 target gene, herein designated TARGET GENE. CYLN2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CYLN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYLN2 BINDING SITE, designated SEQ ID:9937, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[46948] Another function of GAM3770 is therefore inhibition of

Cytoplasmic linker 2 (CYLN2, Accession NP_115797.1), a gene which associates with microtubules and dendritic lamellar bodies. and therefore may be associated with Williams- beuren syndrome. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of Williams- beuren syndrome, and of other diseases and clinical conditions associated with CYLN2.

[46949] The function of CYLN2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM330.2.DBC-1 (Accession NP_066997.3) is another GAM3770 target gene, herein designated TARGET GENE. DBC-1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by DBC-1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DBC-1 BINDING SITE, designated SEQ ID:17305, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46950] Another function of GAM3770 is therefore inhibition of DBC-1 (Accession NP_066997.3) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with DBC-1.

[46951] Digeorge syndrome critical region gene 14 (DGCR14, Accession NP_073210.1) is another GAM3770 target gene, herein designated TARGET GENE. DGCR14 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DGCR14, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DGCR14 BINDING SITE, designated SEQ ID:10110, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46952] Another function of GAM3770 is therefore inhibition of Digeorge syndrome critical region gene 14 (DGCR14, Accession NP_073210.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DGCR14.

[46953] DKFZp434D177-like (Accession XP_209288.2) is another GAM3770 target gene, herein designated TARGET GENE. DKFZp434D177-like BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp434D177-like, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING

SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp434D177-like BINDING SITE, designated SEQ ID:8952, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46954] Another function of GAM3770 is therefore inhibition of DKFZp434D177-like (Accession XP_209288.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp434D177-like.

[46955] DKFZp434E2321 (Accession XP_038298.1) is another GAM3770 target gene, herein designated TARGET GENE. DKFZp434E2321 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp434E2321, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp434E2321 BINDING SITE, designated SEQ ID:4827, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[46956] Another function of GAM3770 is therefore inhibition of DKFZp434E2321 (Accession XP_038298.1) . Accordingly,

utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp434E2321.

[46957] DKFZP434H132 (Accession NP_056307.1) is another GAM3770 target gene, herein designated TARGET GENE. DKFZP434H132 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by DKFZP434H132, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434H132 BINDING SITE, designated SEQ ID:9323, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[46958] Another function of GAM3770 is therefore inhibition of DKFZP434H132 (Accession NP_056307.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434H132.

[46959] DKFZP761D0211 (Accession NP_114428.1) is another GAM3770 target gene, herein designated TARGET GENE. DKFZP761D0211 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

DKFZP761D0211, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP761D0211 BINDING SITE, designated SEQ ID:14838, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[46960] Another function of GAM3770 is therefore inhibition of DKFZP761D0211 (Accession NP_114428.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP761D0211.

[46961] DKFZp761L1518 (Accession XP_294685.2) is another GAM3770 target gene, herein designated TARGET GENE. DKFZp761L1518 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by DKFZp761L1518, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761L1518 BINDING SITE, designated SEQ ID:10498, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46962] Another function of GAM3770 is therefore inhibition of DKFZp761L1518 (Accession XP_294685.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761L1518.

[46963] EDEM (Accession NP_055489.1) is another GAM3770 target gene, herein designated TARGET GENE. EDEM BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by EDEM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EDEM BINDING SITE, designated SEQ ID:4285, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[46964] Another function of GAM3770 is therefore inhibition of EDEM (Accession NP_055489.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EDEM.

[46965] Endothelin 3 (EDN3, Accession NP_000105.1) is another GAM3770 target gene, herein designated TARGET GENE. EDN3 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by EDN3, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EDN3 BINDING SITE, designated SEQ ID:6587, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[46966] Another function of GAM3770 is therefore inhibition of Endothelin 3 (EDN3, Accession NP_000105.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EDN3.

[46967] Ells1 (Accession NP_690006.1) is another GAM3770 target gene, herein designated TARGET GENE. Ells1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by Ells1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of Ells1 BINDING SITE, designated SEQ ID:12892, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46968] Another function of GAM3770 is therefore inhibition of Ells1 (Accession NP_690006.1) . Accordingly, utilities of

GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with Ells1.

[46969] Engulfment and cell motility 1 (ced-12 homolog, c. elegans) (ELMO1, Accession NP_055615.8) is another GAM3770 target gene, herein designated TARGET GENE. ELMO1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by ELMO1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ELMO1 BINDING SITE, designated SEQ ID:16847, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[46970] Another function of GAM3770 is therefore inhibition of Engulfment and cell motility 1 (ced-12 homolog, c. elegans) (ELMO1, Accession NP_055615.8) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ELMO1.

[46971] ERdj5 (Accession NP_061854.1) is another GAM3770 target gene, herein designated TARGET GENE. ERdj5 BINDING SITE is a target binding site found in the 3` untranslated

region of mRNA encoded by ERdj5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ERdj5 BINDING SITE, designated SEQ ID:5195, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[46972] Another function of GAM3770 is therefore inhibition of ERdj5 (Accession NP_061854.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ERdj5.

[46973] Ets variant gene 4 (e1a enhancer binding protein, e1af) (ETV4, Accession NP_001977.1) is another GAM3770 target gene, herein designated TARGET GENE. ETV4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ETV4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ETV4 BINDING SITE, designated SEQ ID:12526, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46974] Another function of GAM3770 is therefore inhibition of Ets

variant gene 4 (e1a enhancer binding protein, e1af) (ETV4, Accession NP_001977.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ETV4.

[46975] F-box only protein 2 (FBXO2, Accession NP_036300.2) is another GAM3770 target gene, herein designated TARGET GENE. FBXO2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FBXO2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FBXO2 BINDING SITE, designated SEQ ID:4915, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46976] Another function of GAM3770 is therefore inhibition of F-box only protein 2 (FBXO2, Accession NP_036300.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FBXO2.

[46977] FLJ10751 (Accession NP_060709.1) is another GAM3770 target gene, herein designated TARGET GENE. FLJ10751 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded

by FLJ10751, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10751 BINDING SITE, designated SEQ ID:764, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46978] Another function of GAM3770 is therefore inhibition of FLJ10751 (Accession NP_060709.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10751.

[46979] FLJ10751 (Accession NP_060675.1) is another GAM3770 target gene, herein designated TARGET GENE. FLJ10751 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FLJ10751, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10751 BINDING SITE, designated SEQ ID:764, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46980] Another function of GAM3770 is therefore inhibition of FLJ10751 (Accession NP_060675.1) . Accordingly, utilities

of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10751.

[46981] FLJ10901 (Accession NP_060735.1) is another GAM3770 target gene, herein designated TARGET GENE. FLJ10901 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10901, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10901 BINDING SITE, designated SEQ ID:18342, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[46982] Another function of GAM3770 is therefore inhibition of FLJ10901 (Accession NP_060735.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10901.

[46983] FLJ10945 (Accession NP_060750.1) is another GAM3770 target gene, herein designated TARGET GENE. FLJ10945 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10945, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10945 BINDING SITE, designated SEQ ID:17908, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[46984] Another function of GAM3770 is therefore inhibition of FLJ10945 (Accession NP_060750.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10945.

[46985] FLJ12121 (Accession NP_079254.1) is another GAM3770 target gene, herein designated TARGET GENE. FLJ12121 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12121, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12121 BINDING SITE, designated SEQ ID:6795, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46986] Another function of GAM3770 is therefore inhibition of FLJ12121 (Accession NP_079254.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ12121.

[46987] FLJ12788 (Accession NP_071937.1) is another GAM3770 target gene, herein designated TARGET GENE. FLJ12788 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12788, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12788 BINDING SITE, designated SEQ ID:18045, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[46988] Another function of GAM3770 is therefore inhibition of FLJ12788 (Accession NP_071937.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12788.

[46989] FLJ13114 (Accession NP_078817.1) is another GAM3770 target gene, herein designated TARGET GENE. FLJ13114 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13114, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ13114 BINDING SITE, designated SEQ ID:14164, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46990] Another function of GAM3770 is therefore inhibition of FLJ13114 (Accession NP_078817.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13114.

[46991] FLJ13224 (Accession NP_079075.1) is another GAM3770 target gene, herein designated TARGET GENE. FLJ13224 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13224, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13224 BINDING SITE, designated SEQ ID:2074, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[46992] Another function of GAM3770 is therefore inhibition of FLJ13224 (Accession NP_079075.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ13224.

[46993] FLJ13646 (Accession NP_078860.1) is another GAM3770 target gene, herein designated TARGET GENE. FLJ13646 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13646, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13646 BINDING SITE, designated SEQ ID:19731, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46994] Another function of GAM3770 is therefore inhibition of FLJ13646 (Accession NP_078860.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13646.

[46995] FLJ20320 (Accession NP_060235.1) is another GAM3770 target gene, herein designated TARGET GENE. FLJ20320 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ20320, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ20320 BINDING SITE, designated SEQ ID:14004, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[46996] Another function of GAM3770 is therefore inhibition of FLJ20320 (Accession NP_060235.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20320.

[46997] FLJ20445 (Accession NP_060294.1) is another GAM3770 target gene, herein designated TARGET GENE. FLJ20445 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20445, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20445 BINDING SITE, designated SEQ ID:3014, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[46998] Another function of GAM3770 is therefore inhibition of FLJ20445 (Accession NP_060294.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20445.

[46999] FLJ22222 (Accession NP_078924.1) is another GAM3770 target gene, herein designated TARGET GENE. FLJ22222 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FLJ22222, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22222 BINDING SITE, designated SEQ ID:8328, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47000] Another function of GAM3770 is therefore inhibition of FLJ22222 (Accession NP_078924.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22222.

[47001] FLJ22222 (Accession NP_787098.2) is another GAM3770 target gene, herein designated TARGET GENE. FLJ22222 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FLJ22222, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of FLJ22222 BINDING SITE, designated SEQ ID:8328, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47002] Another function of GAM3770 is therefore inhibition of FLJ22222 (Accession NP_787098.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22222.

[47003] FLJ23186 (Accession NP_078892.1) is another GAM3770 target gene, herein designated TARGET GENE. FLJ23186 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23186, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23186 BINDING SITE, designated SEQ ID:3020, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47004] Another function of GAM3770 is therefore inhibition of FLJ23186 (Accession NP_078892.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ23186.

[47005] FLJ23323 (Accession NP_078930.1) is another GAM3770 target gene, herein designated TARGET GENE. FLJ23323 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23323, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23323 BINDING SITE, designated SEQ ID:12687, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47006] Another function of GAM3770 is therefore inhibition of FLJ23323 (Accession NP_078930.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23323.

[47007] FLJ23867 (Accession NP_689875.1) is another GAM3770 target gene, herein designated TARGET GENE. FLJ23867 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23867, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ23867 BINDING SITE, designated SEQ ID:1191, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47008] Another function of GAM3770 is therefore inhibition of FLJ23867 (Accession NP_689875.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23867.

[47009] FLJ32096 (Accession NP_776156.1) is another GAM3770 target gene, herein designated TARGET GENE. FLJ32096 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32096, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32096 BINDING SITE, designated SEQ ID:12027, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47010] Another function of GAM3770 is therefore inhibition of FLJ32096 (Accession NP_776156.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32096.

[47011] FLJ32334 (Accession NP_653166.1) is another GAM3770 target gene, herein designated TARGET GENE. FLJ32334 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32334, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32334 BINDING SITE, designated SEQ ID:14094, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47012] Another function of GAM3770 is therefore inhibition of FLJ32334 (Accession NP_653166.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32334.

[47013] FLJ32389 (Accession NP_653218.1) is another GAM3770 target gene, herein designated TARGET GENE. FLJ32389 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32389, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32389 BINDING SITE, designated SEQ ID:18343, to the

nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47014] Another function of GAM3770 is therefore inhibition of FLJ32389 (Accession NP_653218.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32389.

[47015] FLJ32833 (Accession NP_689701.1) is another GAM3770 target gene, herein designated TARGET GENE. FLJ32833 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32833, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32833 BINDING SITE, designated SEQ ID:8952, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47016] Another function of GAM3770 is therefore inhibition of FLJ32833 (Accession NP_689701.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32833.

[47017] FLJ37078 (Accession NP_694588.1) is another GAM3770

target gene, herein designated TARGET GENE. FLJ37078 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ37078, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ37078 BINDING SITE, designated SEQ ID:924, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47018] Another function of GAM3770 is therefore inhibition of FLJ37078 (Accession NP_694588.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ37078.

[47019] FLJ38607 (Accession NP_689867.1) is another GAM3770 target gene, herein designated TARGET GENE. FLJ38607 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ38607, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38607 BINDING SITE, designated SEQ ID:1795, to the nucleotide sequence of GAM3770 RNA, herein designated

GAM RNA, also designated SEQ ID:241.

[47020] Another function of GAM3770 is therefore inhibition of FLJ38607 (Accession NP_689867.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38607.

[47021] FRCP2 (Accession NP_715637.1) is another GAM3770 target gene, herein designated TARGET GENE. FRCP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FRCP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FRCP2 BINDING SITE, designated SEQ ID:8098, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47022] Another function of GAM3770 is therefore inhibition of FRCP2 (Accession NP_715637.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FRCP2.

[47023] Frequenin homolog (drosophila) (FREQ, Accession NP_055101.2) is another GAM3770 target gene, herein designated TARGET GENE. FREQ BINDING SITE is a target

binding site found in the 3` untranslated region of mRNA encoded by FREQ, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FREQ BINDING SITE, designated SEQ ID:12562, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47024] Another function of GAM3770 is therefore inhibition of Frequenin homolog (drosophila) (FREQ, Accession NP_055101.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FREQ.

[47025] Gamma-aminobutyric acid (gaba) a receptor, epsilon (GABRE, Accession NP_068822.1) is another GAM3770 target gene, herein designated TARGET GENE. GABRE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by GABRE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GABRE BINDING SITE, designated SEQ ID:10097, to the nucleotide sequence of GAM3770

RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47026] Another function of GAM3770 is therefore inhibition of Gamma-aminobutyric acid (gaba) a receptor, epsilon (GABRE, Accession NP_068822.1), a gene which mediates neuronal inhibition by binding to the gaba/ benzodiazepine receptor and opening an integral chloride channel. and therefore may be associated with Early- onset parkinsonism (or waisman syndrome), mrx3 (a form of x- linked mental retardation). Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of Early- onset parkinsonism (or waisman syndrome), mrx3 (a form of x- linked mental retardation), and of other diseases and clinical conditions associated with GABRE.

[47027] The function of GABRE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM65.1.Gamma-aminobutyric acid (gaba) a receptor, epsilon (GABRE, Accession NP_068830.1) is another GAM3770 target gene, herein designated TARGET GENE. GABRE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by GABRE, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GABRE BINDING SITE, designated SEQ ID:10097, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47028] Another function of GAM3770 is therefore inhibition of Gamma-aminobutyric acid (gaba) a receptor, epsilon (GABRE, Accession NP_068830.1), a gene which mediates neuronal inhibition by binding to the gaba/ benzodiazepine receptor and opening an integral chloride channel. and therefore may be associated with Early- onset parkinsonism (or waisman syndrome), mrx3 (a form of x- linked mental retardation). Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of Early- onset parkinsonism (or waisman syndrome), mrx3 (a form of x- linked mental retardation), and of other diseases and clinical conditions associated with GABRE.

[47029] The function of GABRE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM65.1.Gamma-aminobutyric acid (gaba) a receptor, epsilon (GABRE, Accession NP_068819.1) is another

GAM3770 target gene, herein designated TARGET GENE. GABRE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by GABRE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GABRE BINDING SITE, designated SEQ ID:10097, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47030] Another function of GAM3770 is therefore inhibition of Gamma-aminobutyric acid (gaba) a receptor, epsilon (GABRE, Accession NP_068819.1), a gene which mediates neuronal inhibition by binding to the gaba/ benzodiazepine receptor and opening an integral chloride channel. and therefore may be associated with Early- onset parkinsonism (or waisman syndrome), mrx3 (a form of x- linked mental retardation). Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of Early- onset parkinsonism (or waisman syndrome), mrx3 (a form of x- linked mental retardation), and of other diseases and clinical conditions associated with GABRE.

[47031] The function of GABRE and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM65.1.Gamma-aminobutyric acid (gaba) a receptor, epsilon (GABRE, Accession NP_004952.1) is another GAM3770 target gene, herein designated TARGET GENE. GABRE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by GABRE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GABRE BINDING SITE, designated SEQ ID:10097, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47032] Another function of GAM3770 is therefore inhibition of Gamma-aminobutyric acid (gaba) a receptor, epsilon (GABRE, Accession NP_004952.1), a gene which mediates neuronal inhibition by binding to the gaba/ benzodiazepine receptor and opening an integral chloride channel. and therefore may be associated with Early- on-set parkinsonism (or waisman syndrome), mrx3 (a form of x- linked mental retardation). Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of

Early- onset parkinsonism (or waisman syndrome), mrx3 (a form of x- linked mental retardation), and of other diseases and clinical conditions associated with GABRE.

[47033] The function of GABRE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM65.1.Udp-n-acetyl-alpha-d-galactosamine:polypeptide n-acetylgalactosaminyltransferase 2 (galnac-t2) (GALNT2, Accession NP_004472.1) is another GAM3770 target gene, herein designated TARGET GENE. GALNT2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GALNT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GALNT2 BINDING SITE, designated SEQ ID:6744, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47034] Another function of GAM3770 is therefore inhibition of Udp-n-acetyl-alpha-d-galactosamine:polypeptide n-acetylgalactosaminyltransferase 2 (galnac-t2) (GALNT2, Accession NP_004472.1), a gene which catalyzes the ini-

tial reaction in o- linked oligosaccharide biosynthesis. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GALNT2.

[47035] The function of GALNT2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM96.1.Glycine amidinotransferase (l-arginine:glycine amidinotransferase) (GATM, Accession NP_001473.1) is another GAM3770 target gene, herein designated TARGET GENE. GATM BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GATM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GATM BINDING SITE, designated SEQ ID:19758, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47036] Another function of GAM3770 is therefore inhibition of Glycine amidinotransferase (l-arginine:glycine amidinotransferase) (GATM, Accession NP_001473.1), a gene which glycine amidinotransferase; component of the creatine biosynthetic pathway and therefore may be associ-

ated with Agat deficiency. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of Agat deficiency., and of other diseases and clinical conditions associated with GATM.

[47037] The function of GATM and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM367.1.Ganglioside-induced differentiation-associated protein 1-like 1 (GDAP1L1, Accession NP_076939.3) is another GAM3770 target gene, herein designated TARGET GENE. GDAP1L1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GDAP1L1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GDAP1L1 BINDING SITE, designated SEQ ID:1628, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47038] Another function of GAM3770 is therefore inhibition of Ganglioside-induced differentiation-associated protein 1-like 1 (GDAP1L1, Accession NP_076939.3) . Accordingly, utilities of GAM3770 include diagnosis, prevention

and treatment of diseases and clinical conditions associated with GDAP1L1.

[47039] Growth differentiation factor 10 (GDF10, Accession NP_004953.1) is another GAM3770 target gene, herein designated TARGET GENE. GDF10 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by GDF10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GDF10 BINDING SITE, designated SEQ ID:15145, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47040] Another function of GAM3770 is therefore inhibition of Growth differentiation factor 10 (GDF10, Accession NP_004953.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GDF10.

[47041] Glycine receptor, alpha 3 (GLRA3, Accession NP_006520.1) is another GAM3770 target gene, herein designated TARGET GENE. GLRA3 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by GLRA3, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GLRA3 BINDING SITE, designated SEQ ID:12548, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47042] Another function of GAM3770 is therefore inhibition of Glycine receptor, alpha 3 (GLRA3, Accession NP_006520.1), a gene which increases the chloride conductance and thus produces hyperpolarization (inhibition of neuronal firing). Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GLRA3.

[47043] The function of GLRA3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM785.1.GNB4 (Accession NP_067642.1) is another GAM3770 target gene, herein designated TARGET GENE. GNB4 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by GNB4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

GNB4 BINDING SITE, designated SEQ ID:19919, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47044] Another function of GAM3770 is therefore inhibition of GNB4 (Accession NP_067642.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GNB4.

[47045] GNPNAT1 (Accession XP_085119.1) is another GAM3770 target gene, herein designated TARGET GENE. GNPNAT1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GNPNAT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GNPNAT1 BINDING SITE, designated SEQ ID:12686, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47046] Another function of GAM3770 is therefore inhibition of GNPNAT1 (Accession XP_085119.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GNPNAT1.

[47047] Glycoprotein a33 (transmembrane) (GPA33, Accession

NP_005805.1) is another GAM3770 target gene, herein designated TARGET GENE. GPA33 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GPA33, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPA33 BINDING SITE, designated SEQ ID:11566, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47048] Another function of GAM3770 is therefore inhibition of Glycoprotein a33 (transmembrane) (GPA33, Accession NP_005805.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPA33.

[47049] GTR2 (Accession NP_071440.1) is another GAM3770 target gene, herein designated TARGET GENE. GTR2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GTR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GTR2 BINDING SITE, designated SEQ ID:18842, to the nucleotide se-

quence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47050] Another function of GAM3770 is therefore inhibition of GTR2 (Accession NP_071440.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GTR2.

[47051] Huntingtin (huntington disease) (HD, Accession NP_002102.2) is another GAM3770 target gene, herein designated TARGET GENE. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HD BINDING SITE, designated SEQ ID:17396, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47052] Another function of GAM3770 is therefore inhibition of Huntingtin (huntington disease) (HD, Accession NP_002102.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HD.

[47053] HEMK (Accession NP_057257.1) is another GAM3770 target gene, herein designated TARGET GENE. HEMK BINDING

SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HEMK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HEMK BINDING SITE, designated SEQ ID:18413, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47054] Another function of GAM3770 is therefore inhibition of HEMK (Accession NP_057257.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HEMK.

[47055] Hect domain and rld 3 (HERC3, Accession NP_055421.1) is another GAM3770 target gene, herein designated TARGET GENE. HERC3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HERC3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HERC3 BINDING SITE, designated SEQ ID:13951, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47056] Another function of GAM3770 is therefore inhibition of Hect domain and rld 3 (HERC3, Accession NP_055421.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HERC3.

[47057] HFL-EDDG1 (Accession NP_006544.1) is another GAM3770 target gene, herein designated TARGET GENE. HFL-EDDG1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HFL-EDDG1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HFL-EDDG1 BINDING SITE, designated SEQ ID:13232, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47058] Another function of GAM3770 is therefore inhibition of HFL-EDDG1 (Accession NP_006544.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HFL-EDDG1.

[47059] hIAN2 (Accession NP_078987.2) is another GAM3770 target gene, herein designated TARGET GENE. hIAN2 BIND-

ING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by hIAN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of hIAN2 BINDING SITE, designated SEQ ID:19907, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47060] Another function of GAM3770 is therefore inhibition of hIAN2 (Accession NP_078987.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with hIAN2.

[47061] Hypermethylated in cancer 2 (HIC2, Accession NP_055909.1) is another GAM3770 target gene, herein designated TARGET GENE. HIC2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by HIC2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HIC2 BINDING SITE, designated SEQ ID:3402, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47062] Another function of GAM3770 is therefore inhibition of Hypermethylated in cancer 2 (HIC2, Accession NP_055909.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HIC2.

[47063] Hypermethylated in cancer 2 (HIC2, Accession XP_036937.2) is another GAM3770 target gene, herein designated TARGET GENE. HIC2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by HIC2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HIC2 BINDING SITE, designated SEQ ID:3402, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47064] Another function of GAM3770 is therefore inhibition of Hypermethylated in cancer 2 (HIC2, Accession XP_036937.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HIC2.

[47065] HIP1R (Accession XP_290592.1) is another GAM3770 target gene, herein designated TARGET GENE. HIP1R BINDING

SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HIP1R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HIP1R BINDING SITE, designated SEQ ID:16778, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47066] Another function of GAM3770 is therefore inhibition of HIP1R (Accession XP_290592.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HIP1R.

[47067] High-mobility group box 3 (HMGB3, Accession NP_005333.1) is another GAM3770 target gene, herein designated TARGET GENE. HMGB3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HMGB3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HMGB3 BINDING SITE, designated SEQ ID:4089, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47068] Another function of GAM3770 is therefore inhibition of High-mobility group box 3 (HMGB3, Accession NP_005333.1), a gene which plays a fundamental role in DNA replication, nucleosome assembly, and transcription. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HMGB3.

[47069] The function of HMGB3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM409.1.Heparan sulfate (glucosamine) 3-o-sulfotransferase 4 (HS3ST4, Accession XP_056254.4) is another GAM3770 target gene, herein designated TARGET GENE. HS3ST4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HS3ST4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HS3ST4 BINDING SITE, designated SEQ ID:1736, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47070] Another function of GAM3770 is therefore inhibition of

Heparan sulfate (glucosamine) 3-o-sulfotransferase 4 (HS3ST4, Accession XP_056254.4) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HS3ST4.

[47071] Hydroxy-delta-5-steroid dehydrogenase, 3 beta- and steroid delta-isomerase 2 (HSD3B2, Accession NP_000189.1) is another GAM3770 target gene, herein designated TARGET GENE. HSD3B2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HSD3B2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSD3B2 BINDING SITE, designated SEQ ID:10226, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47072] Another function of GAM3770 is therefore inhibition of Hydroxy-delta-5-steroid dehydrogenase, 3 beta- and steroid delta-isomerase 2 (HSD3B2, Accession NP_000189.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSD3B2.

[47073] HUMPPA (Accession XP_290730.2) is another GAM3770 target gene, herein designated TARGET GENE. HUMPPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HUMPPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HUMPPA BINDING SITE, designated SEQ ID:1054, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47074] Another function of GAM3770 is therefore inhibition of HUMPPA (Accession XP_290730.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HUMPPA.

[47075] Inhibitor of dna binding 4, dominant negative helix-loop-helix protein (ID4, Accession NP_001537.1) is another GAM3770 target gene, herein designated TARGET GENE. ID4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ID4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of ID4 BINDING SITE, designated SEQ ID:2437, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47076] Another function of GAM3770 is therefore inhibition of Inhibitor of dna binding 4, dominant negative helix-loop-helix protein (ID4, Accession NP_001537.1), a gene which negatively regulates cell differentiation. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ID4.

[47077] The function of ID4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM71.1.Interferon induced transmembrane protein 2 (1-8d) (IFITM2, Accession NP_006426.1) is another GAM3770 target gene, herein designated TARGET GENE. IFITM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IFITM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IFITM2 BINDING SITE, designated SEQ ID:3118, to the nucleotide sequence of GAM3770 RNA, herein designated

GAM RNA, also designated SEQ ID:281.

[47078] Another function of GAM3770 is therefore inhibition of Interferon induced transmembrane protein 2 (1-8d) (IFITM2, Accession NP_006426.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IFITM2.

[47079] Interleukin 6 receptor (IL6R, Accession NP_000556.1) is another GAM3770 target gene, herein designated TARGET GENE. IL6R BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by IL6R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL6R BINDING SITE, designated SEQ ID:10573, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47080] Another function of GAM3770 is therefore inhibition of Interleukin 6 receptor (IL6R, Accession NP_000556.1), a gene which is essential to the regulation of the immune response, hematopoiesis, and acute- phase reactions. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions as-

sociated with IL6R.

[47081] The function of IL6R and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM94.1.Interleukin 6 receptor (IL6R, Accession NP_852004.1) is another GAM3770 target gene, herein designated TARGET GENE. IL6R BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by IL6R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL6R BINDING SITE, designated SEQ ID:10573, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47082] Another function of GAM3770 is therefore inhibition of Interleukin 6 receptor (IL6R, Accession NP_852004.1), a gene which is essential to the regulation of the immune response, hematopoiesis, and acute- phase reactions. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL6R.

[47083] The function of IL6R and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM94.1.Inhibin, beta b (activin ab beta polypeptide) (INHBB, Accession NP_002184.1) is another GAM3770 target gene, herein designated TARGET GENE. INHBB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by INHBB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of INHBB BINDING SITE, designated SEQ ID:14744, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47084] Another function of GAM3770 is therefore inhibition of Inhibin, beta b (activin ab beta polypeptide) (INHBB, Accession NP_002184.1), a gene which inhibins inhibit the secretion of follitropin by the pituitary gland. and therefore may be associated with Tumors. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of Tumors, and of other diseases and clinical conditions associated with INHBB.

[47085] The function of INHBB and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM174.1.Potassium voltage-gated channel, shab-related subfamily, member 2 (KCNB2, Accession NP_004761.2) is another GAM3770 target gene, herein designated TARGET GENE. KCNB2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KCNB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNB2 BINDING SITE, designated SEQ ID:6452, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47086] Another function of GAM3770 is therefore inhibition of Potassium voltage-gated channel, shab-related subfamily, member 2 (KCNB2, Accession NP_004761.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNB2.

[47087] Potassium voltage-gated channel, shal-related subfamily, member 1 (KCND1, Accession NP_004970.3) is another GAM3770 target gene, herein designated TARGET GENE. KCND1 BINDING SITE is a target binding site found in the

3` untranslated region of mRNA encoded by KCND1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCND1 BINDING SITE, designated SEQ ID:12525, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47088] Another function of GAM3770 is therefore inhibition of Potassium voltage-gated channel, shal-related subfamily, member 1 (KCND1, Accession NP_004970.3) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCND1.

[47089] Kdel (lys-asp-glu-leu) endoplasmic reticulum protein retention receptor 1 (KDELR1, Accession NP_006792.1) is another GAM3770 target gene, herein designated TARGET GENE. KDELR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KDELR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KDELR1 BINDING SITE, designated SEQ ID:1055, to the nucleotide sequence of GAM3770

RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47090] Another function of GAM3770 is therefore inhibition of Kdel (lys-asp-glu-leu) endoplasmic reticulum protein retention receptor 1 (KDELR1, Accession NP_006792.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KDELR1.

[47091] KIAA0194 (Accession XP_038362.3) is another GAM3770 target gene, herein designated TARGET GENE. KIAA0194 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0194, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0194 BINDING SITE, designated SEQ ID:19314, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47092] Another function of GAM3770 is therefore inhibition of KIAA0194 (Accession XP_038362.3) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0194.

[47093] KIAA0252 (Accession NP_055953.1) is another GAM3770 target gene, herein designated TARGET GENE. KIAA0252 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0252, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0252 BINDING SITE, designated SEQ ID:19417, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47094] Another function of GAM3770 is therefore inhibition of KIAA0252 (Accession NP_055953.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0252.

[47095] KIAA0570 (Accession XP_291018.1) is another GAM3770 target gene, herein designated TARGET GENE. KIAA0570 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0570, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0570 BINDING SITE, designated SEQ ID:3719, to the

nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47096] Another function of GAM3770 is therefore inhibition of KIAA0570 (Accession XP_291018.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0570.

[47097] KIAA0657 (Accession XP_051017.2) is another GAM3770 target gene, herein designated TARGET GENE. KIAA0657 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0657, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0657 BINDING SITE, designated SEQ ID:10072, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47098] Another function of GAM3770 is therefore inhibition of KIAA0657 (Accession XP_051017.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0657.

[47099] KIAA1032 (Accession XP_038604.4) is another GAM3770

target gene, herein designated TARGET GENE. KIAA1032 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1032, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1032 BINDING SITE, designated SEQ ID:12901, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47100] Another function of GAM3770 is therefore inhibition of KIAA1032 (Accession XP_038604.4) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1032.

[47101] KIAA1209 (Accession XP_027307.2) is another GAM3770 target gene, herein designated TARGET GENE. KIAA1209 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1209, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1209 BINDING SITE, designated SEQ ID:11915, to the nucleotide sequence of GAM3770 RNA, herein designated

GAM RNA, also designated SEQ ID:281.

[47102] Another function of GAM3770 is therefore inhibition of KIAA1209 (Accession XP_027307.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1209.

[47103] KIAA1522 (Accession XP_036299.6) is another GAM3770 target gene, herein designated TARGET GENE. KIAA1522 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1522, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1522 BINDING SITE, designated SEQ ID:17568, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47104] Another function of GAM3770 is therefore inhibition of KIAA1522 (Accession XP_036299.6) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1522.

[47105] KIAA1813 (Accession XP_046743.2) is another GAM3770 target gene, herein designated TARGET GENE. KIAA1813

BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA1813, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1813 BINDING SITE, designated SEQ ID:6050, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47106] Another function of GAM3770 is therefore inhibition of KIAA1813 (Accession XP_046743.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1813.

[47107] KIAA1939 (Accession NP_079113.1) is another GAM3770 target gene, herein designated TARGET GENE. KIAA1939 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA1939, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1939 BINDING SITE, designated SEQ ID:4111, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47108] Another function of GAM3770 is therefore inhibition of KIAA1939 (Accession NP_079113.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1939.

[47109] Kinesin family member 5a (KIF5A, Accession NP_004975.1) is another GAM3770 target gene, herein designated TARGET GENE. KIF5A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIF5A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIF5A BINDING SITE, designated SEQ ID:14793, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47110] Another function of GAM3770 is therefore inhibition of Kinesin family member 5a (KIF5A, Accession NP_004975.1), a gene which is a microtubule- associated force- producing protein that may play a role in organelle transport. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIF5A.

[47111] The function of KIF5A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.Kallikrein 12 (KLK12, Accession NP_665901.1) is another GAM3770 target gene, herein designated TARGET GENE. KLK12 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by KLK12, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KLK12 BINDING SITE, designated SEQ ID:12199, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47112] Another function of GAM3770 is therefore inhibition of Kallikrein 12 (KLK12, Accession NP_665901.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KLK12.

[47113] Kallikrein 12 (KLK12, Accession NP_665902.1) is another GAM3770 target gene, herein designated TARGET GENE. KLK12 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA

encoded by KLK12, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KLK12 BINDING SITE, designated SEQ ID:12199, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47114] Another function of GAM3770 is therefore inhibition of Kallikrein 12 (KLK12, Accession NP_665902.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KLK12.

[47115] KRTHBP2 (Accession XP_303553.1) is another GAM3770 target gene, herein designated TARGET GENE. KRTHBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KRTHBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KRTHBP2 BINDING SITE, designated SEQ ID:12132, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47116] Another function of GAM3770 is therefore inhibition of

KRTHBP2 (Accession XP_303553.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KRTHBP2.

[47117] LCHN (Accession XP_098615.2) is another GAM3770 target gene, herein designated TARGET GENE. LCHN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LCHN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LCHN BINDING SITE, designated SEQ ID:19437, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47118] Another function of GAM3770 is therefore inhibition of LCHN (Accession XP_098615.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LCHN.

[47119] LOC115219 (Accession XP_055499.2) is another GAM3770 target gene, herein designated TARGET GENE. LOC115219 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC115219, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC115219 BINDING SITE, designated SEQ ID:13877, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47120] Another function of GAM3770 is therefore inhibition of LOC115219 (Accession XP_055499.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC115219.

[47121] LOC122704 (Accession XP_058647.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC122704 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC122704, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC122704 BINDING SITE, designated SEQ ID:12936, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47122] Another function of GAM3770 is therefore inhibition of

LOC122704 (Accession XP_058647.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC122704.

[47123] LOC124842 (Accession XP_064333.3) is another GAM3770 target gene, herein designated TARGET GENE. LOC124842 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC124842, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC124842 BINDING SITE, designated SEQ ID:15407, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47124] Another function of GAM3770 is therefore inhibition of LOC124842 (Accession XP_064333.3) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC124842.

[47125] LOC137886 (Accession XP_059929.3) is another GAM3770 target gene, herein designated TARGET GENE. LOC137886 BINDING SITE is a target binding site found in

the 3` untranslated region of mRNA encoded by LOC137886, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC137886 BINDING SITE, designated SEQ ID:4502, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47126] Another function of GAM3770 is therefore inhibition of LOC137886 (Accession XP_059929.3) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC137886.

[47127] LOC143310 (Accession XP_084485.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC143310 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC143310, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC143310 BINDING SITE, designated SEQ ID:17009, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:281.

[47128] Another function of GAM3770 is therefore inhibition of LOC143310 (Accession XP_084485.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC143310.

[47129] LOC143680 (Accession XP_096474.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC143680 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC143680, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC143680 BINDING SITE, designated SEQ ID:11678, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47130] Another function of GAM3770 is therefore inhibition of LOC143680 (Accession XP_096474.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC143680.

[47131] LOC144248 (Accession XP_084786.1) is another

GAM3770 target gene, herein designated TARGET GENE. LOC144248 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC144248, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144248 BINDING SITE, designated SEQ ID:16663, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47132] Another function of GAM3770 is therefore inhibition of LOC144248 (Accession XP_084786.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144248.

[47133] LOC144438 (Accession XP_084860.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC144438 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC144438, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144438 BINDING SITE, desig-

nated SEQ ID:6020, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47134] Another function of GAM3770 is therefore inhibition of LOC144438 (Accession XP_084860.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144438.

[47135] LOC146229 (Accession XP_085387.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC146229 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC146229, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146229 BINDING SITE, designated SEQ ID:5022, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47136] Another function of GAM3770 is therefore inhibition of LOC146229 (Accession XP_085387.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC146229.

[47137] LOC146325 (Accession NP_660313.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC146325 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC146325, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146325 BINDING SITE, designated SEQ ID:16441, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47138] Another function of GAM3770 is therefore inhibition of LOC146325 (Accession NP_660313.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146325.

[47139] LOC146350 (Accession XP_096985.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC146350 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC146350, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146350 BINDING SITE, designated SEQ ID:17607, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47140] Another function of GAM3770 is therefore inhibition of LOC146350 (Accession XP_096985.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146350.

[47141] LOC148918 (Accession XP_086361.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC148918 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC148918, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC148918 BINDING SITE, designated SEQ ID:17967, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47142] Another function of GAM3770 is therefore inhibition of LOC148918 (Accession XP_086361.1) . Accordingly, utili-

ties of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148918.

[47143] LOC150157 (Accession XP_097823.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC150157 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC150157, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150157 BINDING SITE, designated SEQ ID:6127, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47144] Another function of GAM3770 is therefore inhibition of LOC150157 (Accession XP_097823.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150157.

[47145] LOC150935 (Accession XP_087049.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC150935 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

LOC150935, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150935 BINDING SITE, designated SEQ ID:9952, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47146] Another function of GAM3770 is therefore inhibition of LOC150935 (Accession XP_087049.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150935.

[47147] LOC151154 (Accession XP_098008.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC151154 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC151154, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151154 BINDING SITE, designated SEQ ID:14042, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47148] Another function of GAM3770 is therefore inhibition of LOC151154 (Accession XP_098008.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151154.

[47149] LOC151647 (Accession XP_087261.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC151647 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC151647, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151647 BINDING SITE, designated SEQ ID:13550, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47150] Another function of GAM3770 is therefore inhibition of LOC151647 (Accession XP_087261.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151647.

[47151] LOC152719 (Accession XP_098257.1) is another GAM3770 target gene, herein designated TARGET GENE.

LOC152719 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC152719, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152719 BINDING SITE, designated SEQ ID:6325, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47152] Another function of GAM3770 is therefore inhibition of LOC152719 (Accession XP_098257.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152719.

[47153] LOC152790 (Accession XP_098264.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC152790 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC152790, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152790 BINDING SITE, designated SEQ ID:9283, to the nucleotide sequence of

GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47154] Another function of GAM3770 is therefore inhibition of LOC152790 (Accession XP_098264.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152790.

[47155] LOC154822 (Accession XP_098618.3) is another GAM3770 target gene, herein designated TARGET GENE. LOC154822 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC154822, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC154822 BINDING SITE, designated SEQ ID:5835, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47156] Another function of GAM3770 is therefore inhibition of LOC154822 (Accession XP_098618.3) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC154822.

[47157] LOC154860 (Accession XP_098623.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC154860 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC154860, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC154860 BINDING SITE, designated SEQ ID:13099, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47158] Another function of GAM3770 is therefore inhibition of LOC154860 (Accession XP_098623.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC154860.

[47159] LOC155036 (Accession XP_098651.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC155036 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC155036, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC155036 BINDING SITE, designated SEQ ID:2202, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47160] Another function of GAM3770 is therefore inhibition of LOC155036 (Accession XP_098651.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC155036.

[47161] LOC158062 (Accession XP_098861.2) is another GAM3770 target gene, herein designated TARGET GENE. LOC158062 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC158062, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158062 BINDING SITE, designated SEQ ID:19866, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47162] Another function of GAM3770 is therefore inhibition of LOC158062 (Accession XP_098861.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC158062.

[47163] LOC170371 (Accession XP_096316.5) is another GAM3770 target gene, herein designated TARGET GENE. LOC170371 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC170371, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC170371 BINDING SITE, designated SEQ ID:17257, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47164] Another function of GAM3770 is therefore inhibition of LOC170371 (Accession XP_096316.5) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC170371.

[47165] LOC196484 (Accession XP_031807.3) is another GAM3770 target gene, herein designated TARGET GENE. LOC196484 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC196484, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC196484 BINDING SITE, designated SEQ ID:19892, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47166] Another function of GAM3770 is therefore inhibition of LOC196484 (Accession XP_031807.3) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC196484.

[47167] LOC197322 (Accession NP_777577.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC197322 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC197322, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC197322 BINDING SITE, designated SEQ ID:1678, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47168] Another function of GAM3770 is therefore inhibition of

LOC197322 (Accession NP_777577.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC197322.

[47169] LOC202404 (Accession XP_114481.4) is another GAM3770 target gene, herein designated TARGET GENE. LOC202404 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC202404, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC202404 BINDING SITE, designated SEQ ID:3891, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47170] Another function of GAM3770 is therefore inhibition of LOC202404 (Accession XP_114481.4) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC202404.

[47171] LOC221218 (Accession XP_166281.3) is another GAM3770 target gene, herein designated TARGET GENE. LOC221218 BINDING SITE is a target binding site found in

the 3` untranslated region of mRNA encoded by LOC221218, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221218 BINDING SITE, designated SEQ ID:18010, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47172] Another function of GAM3770 is therefore inhibition of LOC221218 (Accession XP_166281.3) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221218.

[47173] LOC221442 (Accession XP_166432.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC221442 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC221442, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221442 BINDING SITE, designated SEQ ID:11963, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:241.

[47174] Another function of GAM3770 is therefore inhibition of LOC221442 (Accession XP_166432.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221442.

[47175] LOC253559 (Accession NP_694854.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC253559 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC253559, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC253559 BINDING SITE, designated SEQ ID:6427, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47176] Another function of GAM3770 is therefore inhibition of LOC253559 (Accession NP_694854.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC253559.

[47177] LOC254099 (Accession XP_173023.1) is another

GAM3770 target gene, herein designated TARGET GENE. LOC254099 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC254099, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC254099 BINDING SITE, designated SEQ ID:3792, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47178] Another function of GAM3770 is therefore inhibition of LOC254099 (Accession XP_173023.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC254099.

[47179] LOC255783 (Accession XP_170871.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC255783 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LOC255783, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC255783

BINDING SITE, designated SEQ ID:746, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47180] Another function of GAM3770 is therefore inhibition of LOC255783 (Accession XP_170871.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255783.

[47181] LOC255783 (Accession NP_848606.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC255783 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LOC255783, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC255783 BINDING SITE, designated SEQ ID:746, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47182] Another function of GAM3770 is therefore inhibition of LOC255783 (Accession NP_848606.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC255783.

[47183] LOC282965 (Accession XP_210833.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC282965 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC282965, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282965 BINDING SITE, designated SEQ ID:20085, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47184] Another function of GAM3770 is therefore inhibition of LOC282965 (Accession XP_210833.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282965.

[47185] LOC283005 (Accession XP_208481.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC283005 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283005, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283005 BINDING SITE, designated SEQ ID:14676, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47186] Another function of GAM3770 is therefore inhibition of LOC283005 (Accession XP_208481.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283005.

[47187] LOC283045 (Accession XP_210866.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC283045 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283045, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283045 BINDING SITE, designated SEQ ID:19707, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47188] Another function of GAM3770 is therefore inhibition of LOC283045 (Accession XP_210866.1) . Accordingly, utili-

ties of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283045.

[47189] LOC283048 (Accession XP_210867.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC283048 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283048, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283048 BINDING SITE, designated SEQ ID:12366, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47190] Another function of GAM3770 is therefore inhibition of LOC283048 (Accession XP_210867.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283048.

[47191] LOC283454 (Accession XP_211049.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC283454 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by

LOC283454, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283454 BINDING SITE, designated SEQ ID:15833, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47192] Another function of GAM3770 is therefore inhibition of LOC283454 (Accession XP_211049.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283454.

[47193] LOC283491 (Accession XP_208695.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC283491 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283491, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283491 BINDING SITE, designated SEQ ID:14118, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47194] Another function of GAM3770 is therefore inhibition of LOC283491 (Accession XP_208695.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283491.

[47195] LOC283526 (Accession XP_211081.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC283526 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283526, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283526 BINDING SITE, designated SEQ ID:4485, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47196] Another function of GAM3770 is therefore inhibition of LOC283526 (Accession XP_211081.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283526.

[47197] LOC283851 (Accession XP_211229.1) is another GAM3770 target gene, herein designated TARGET GENE.

LOC283851 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283851, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283851 BINDING SITE, designated SEQ ID:9696, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47198] Another function of GAM3770 is therefore inhibition of LOC283851 (Accession XP_211229.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283851.

[47199] LOC283875 (Accession XP_211241.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC283875 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283875, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283875 BINDING SITE, designated SEQ ID:12309, to the nucleotide sequence of

GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47200] Another function of GAM3770 is therefore inhibition of LOC283875 (Accession XP_211241.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283875.

[47201] LOC283921 (Accession XP_211263.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC283921 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283921, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283921 BINDING SITE, designated SEQ ID:13328, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47202] Another function of GAM3770 is therefore inhibition of LOC283921 (Accession XP_211263.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283921.

[47203] LOC284084 (Accession XP_211325.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC284084 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284084, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284084 BINDING SITE, designated SEQ ID:14562, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47204] Another function of GAM3770 is therefore inhibition of LOC284084 (Accession XP_211325.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284084.

[47205] LOC284118 (Accession XP_211336.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC284118 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284118, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC284118 BINDING SITE, designated SEQ ID:15952, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47206] Another function of GAM3770 is therefore inhibition of LOC284118 (Accession XP_211336.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284118.

[47207] LOC284130 (Accession XP_209031.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC284130 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284130, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284130 BINDING SITE, designated SEQ ID:18185, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47208] Another function of GAM3770 is therefore inhibition of LOC284130 (Accession XP_209031.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC284130.

[47209] LOC284336 (Accession XP_211438.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC284336 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284336, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284336 BINDING SITE, designated SEQ ID:13309, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47210] Another function of GAM3770 is therefore inhibition of LOC284336 (Accession XP_211438.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284336.

[47211] LOC284570 (Accession XP_211521.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC284570 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284570, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284570 BINDING SITE, designated SEQ ID:4065, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47212] Another function of GAM3770 is therefore inhibition of LOC284570 (Accession XP_211521.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284570.

[47213] LOC284708 (Accession XP_209332.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC284708 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284708, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284708 BINDING SITE, designated SEQ ID:9883, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47214] Another function of GAM3770 is therefore inhibition of

LOC284708 (Accession XP_209332.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284708.

[47215] LOC284736 (Accession XP_209343.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC284736 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284736, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284736 BINDING SITE, designated SEQ ID:1836, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47216] Another function of GAM3770 is therefore inhibition of LOC284736 (Accession XP_209343.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284736.

[47217] LOC284751 (Accession XP_211622.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC284751 BINDING SITE is a target binding site found in

the 3` untranslated region of mRNA encoded by LOC284751, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284751 BINDING SITE, designated SEQ ID:7838, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47218] Another function of GAM3770 is therefore inhibition of LOC284751 (Accession XP_211622.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284751.

[47219] LOC284997 (Accession XP_211723.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC284997 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284997, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284997 BINDING SITE, designated SEQ ID:19759, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:281.

[47220] Another function of GAM3770 is therefore inhibition of LOC284997 (Accession XP_211723.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284997.

[47221] LOC285085 (Accession XP_209463.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC285085 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285085, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285085 BINDING SITE, designated SEQ ID:9957, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47222] Another function of GAM3770 is therefore inhibition of LOC285085 (Accession XP_209463.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285085.

[47223] LOC285582 (Accession XP_211943.1) is another

GAM3770 target gene, herein designated TARGET GENE. LOC285582 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285582, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285582 BINDING SITE, designated SEQ ID:12902, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47224] Another function of GAM3770 is therefore inhibition of LOC285582 (Accession XP_211943.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285582.

[47225] LOC285589 (Accession XP_209671.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC285589 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285589, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285589 BINDING SITE, desig-

nated SEQ ID:10045, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47226] Another function of GAM3770 is therefore inhibition of LOC285589 (Accession XP_209671.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285589.

[47227] LOC285622 (Accession XP_208333.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC285622 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285622, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285622 BINDING SITE, designated SEQ ID:8952, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47228] Another function of GAM3770 is therefore inhibition of LOC285622 (Accession XP_208333.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC285622.

[47229] LOC285727 (Accession XP_212000.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC285727 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285727, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285727 BINDING SITE, designated SEQ ID:2857, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47230] Another function of GAM3770 is therefore inhibition of LOC285727 (Accession XP_212000.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285727.

[47231] LOC285772 (Accession XP_212014.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC285772 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285772, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285772 BINDING SITE, designated SEQ ID:2909, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47232] Another function of GAM3770 is therefore inhibition of LOC285772 (Accession XP_212014.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285772.

[47233] LOC285951 (Accession XP_212090.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC285951 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285951, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285951 BINDING SITE, designated SEQ ID:3942, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47234] Another function of GAM3770 is therefore inhibition of LOC285951 (Accession XP_212090.1) . Accordingly, utili-

ties of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285951.

[47235] LOC286058 (Accession XP_212158.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC286058 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286058, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286058 BINDING SITE, designated SEQ ID:1673, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47236] Another function of GAM3770 is therefore inhibition of LOC286058 (Accession XP_212158.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286058.

[47237] LOC286078 (Accession XP_212163.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC286078 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by

LOC286078, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286078 BINDING SITE, designated SEQ ID:11859, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47238] Another function of GAM3770 is therefore inhibition of LOC286078 (Accession XP_212163.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286078.

[47239] LOC286206 (Accession XP_209953.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC286206 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286206, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286206 BINDING SITE, designated SEQ ID:5166, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47240] Another function of GAM3770 is therefore inhibition of LOC286206 (Accession XP_209953.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286206.

[47241] LOC286214 (Accession XP_212231.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC286214 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286214, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286214 BINDING SITE, designated SEQ ID:19388, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47242] Another function of GAM3770 is therefore inhibition of LOC286214 (Accession XP_212231.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286214.

[47243] LOC286381 (Accession XP_212298.1) is another GAM3770 target gene, herein designated TARGET GENE.

LOC286381 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286381, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286381 BINDING SITE, designated SEQ ID:13537, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47244] Another function of GAM3770 is therefore inhibition of LOC286381 (Accession XP_212298.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286381.

[47245] LOC286493 (Accession XP_208437.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC286493 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286493, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286493 BINDING SITE, designated SEQ ID:18478, to the nucleotide sequence of

GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47246] Another function of GAM3770 is therefore inhibition of LOC286493 (Accession XP_208437.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286493.

[47247] LOC338769 (Accession XP_294696.2) is another GAM3770 target gene, herein designated TARGET GENE. LOC338769 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC338769, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338769 BINDING SITE, designated SEQ ID:2578, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47248] Another function of GAM3770 is therefore inhibition of LOC338769 (Accession XP_294696.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338769.

[47249] LOC339149 (Accession XP_294830.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC339149 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339149, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339149 BINDING SITE, designated SEQ ID:19949, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47250] Another function of GAM3770 is therefore inhibition of LOC339149 (Accession XP_294830.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339149.

[47251] LOC339392 (Accession XP_294925.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC339392 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339392, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC339392 BINDING SITE, designated SEQ ID:4480, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47252] Another function of GAM3770 is therefore inhibition of LOC339392 (Accession XP_294925.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339392.

[47253] LOC339442 (Accession XP_294957.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC339442 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339442, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339442 BINDING SITE, designated SEQ ID:995, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47254] Another function of GAM3770 is therefore inhibition of LOC339442 (Accession XP_294957.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC339442.

[47255] LOC339492 (Accession XP_290919.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC339492 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339492, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339492 BINDING SITE, designated SEQ ID:17748, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47256] Another function of GAM3770 is therefore inhibition of LOC339492 (Accession XP_290919.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339492.

[47257] LOC339502 (Accession XP_294983.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC339502 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339502, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339502 BINDING SITE, designated SEQ ID:18035, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47258] Another function of GAM3770 is therefore inhibition of LOC339502 (Accession XP_294983.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339502.

[47259] LOC339975 (Accession XP_295115.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC339975 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339975, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339975 BINDING SITE, designated SEQ ID:5687, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47260] Another function of GAM3770 is therefore inhibition of

LOC339975 (Accession XP_295115.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339975.

[47261] LOC340319 (Accession XP_295216.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC340319 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340319, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340319 BINDING SITE, designated SEQ ID:3583, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47262] Another function of GAM3770 is therefore inhibition of LOC340319 (Accession XP_295216.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340319.

[47263] LOC348549 (Accession XP_211637.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC348549 BINDING SITE1 and LOC348549 BINDING

SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC348549, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348549 BINDING SITE1 and LOC348549 BINDING SITE2, designated SEQ ID:12486 and SEQ ID:20123 respectively, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47264] Another function of GAM3770 is therefore inhibition of LOC348549 (Accession XP_211637.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348549.

[47265] LOC348897 (Accession XP_300874.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC348897 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348897, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348897 BINDING SITE, designated SEQ ID:14363, to the nucleotide sequence of

GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47266] Another function of GAM3770 is therefore inhibition of LOC348897 (Accession XP_300874.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348897.

[47267] LOC349312 (Accession XP_303025.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC349312 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC349312, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349312 BINDING SITE, designated SEQ ID:13537, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47268] Another function of GAM3770 is therefore inhibition of LOC349312 (Accession XP_303025.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349312.

[47269] LOC349364 (Accession XP_303037.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC349364 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC349364, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349364 BINDING SITE, designated SEQ ID:12158, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47270] Another function of GAM3770 is therefore inhibition of LOC349364 (Accession XP_303037.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349364.

[47271] LOC349613 (Accession XP_303409.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC349613 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC349613, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC349613 BINDING SITE, designated SEQ ID:19525, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47272] Another function of GAM3770 is therefore inhibition of LOC349613 (Accession XP_303409.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349613.

[47273] LOC350154 (Accession XP_301527.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC350154 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC350154, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC350154 BINDING SITE, designated SEQ ID:13364, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47274] Another function of GAM3770 is therefore inhibition of LOC350154 (Accession XP_301527.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC350154.

[47275] LOC352856 (Accession XP_304742.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC352856 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC352856, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC352856 BINDING SITE, designated SEQ ID:8614, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47276] Another function of GAM3770 is therefore inhibition of LOC352856 (Accession XP_304742.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC352856.

[47277] LOC63928 (Accession NP_071380.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC63928 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC63928, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC63928 BINDING SITE, designated SEQ ID:6921, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47278] Another function of GAM3770 is therefore inhibition of LOC63928 (Accession NP_071380.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC63928.

[47279] LOC90110 (Accession XP_029046.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC90110 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC90110, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90110 BINDING SITE, designated SEQ ID:3656, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47280] Another function of GAM3770 is therefore inhibition of LOC90110 (Accession XP_029046.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC90110.

[47281] LOC90170 (Accession XP_029589.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC90170 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC90170, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90170 BINDING SITE, designated SEQ ID:8664, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47282] Another function of GAM3770 is therefore inhibition of LOC90170 (Accession XP_029589.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90170.

[47283] LOC90668 (Accession XP_090790.7) is another GAM3770 target gene, herein designated TARGET GENE. LOC90668 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC90668, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of LOC90668 BINDING SITE, designated SEQ ID:9653, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47284] Another function of GAM3770 is therefore inhibition of LOC90668 (Accession XP_090790.7) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90668.

[47285] LOC91661 (Accession NP_612381.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC91661 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC91661, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC91661 BINDING SITE, designated SEQ ID:2238, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47286] Another function of GAM3770 is therefore inhibition of LOC91661 (Accession NP_612381.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC91661.

[47287] LOC96597 (Accession XP_039922.1) is another GAM3770 target gene, herein designated TARGET GENE. LOC96597 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC96597, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC96597 BINDING SITE, designated SEQ ID:9043, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47288] Another function of GAM3770 is therefore inhibition of LOC96597 (Accession XP_039922.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC96597.

[47289] LRRC8 (Accession XP_026998.2) is another GAM3770 target gene, herein designated TARGET GENE. LRRC8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LRRC8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LRRC8

BINDING SITE, designated SEQ ID:11922, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47290] Another function of GAM3770 is therefore inhibition of LRRC8 (Accession XP_026998.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LRRC8.

[47291] Mitogen-activated protein kinase 8 interacting protein 3 (MAPK8IP3, Accession NP_203750.1) is another GAM3770 target gene, herein designated TARGET GENE. MAPK8IP3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPK8IP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAPK8IP3 BINDING SITE, designated SEQ ID:11255, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47292] Another function of GAM3770 is therefore inhibition of Mitogen-activated protein kinase 8 interacting protein 3 (MAPK8IP3, Accession NP_203750.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with MAPK8IP3.

[47293] MDS018 (Accession NP_068595.2) is another GAM3770 target gene, herein designated TARGET GENE. MDS018 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MDS018, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MDS018 BINDING SITE, designated SEQ ID:7934, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47294] Another function of GAM3770 is therefore inhibition of MDS018 (Accession NP_068595.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MDS018.

[47295] Antigen p97 (melanoma associated) identified by monoclonal antibodies 133.2 and 96.5 (MFI2, Accession NP_201573.1) is another GAM3770 target gene, herein designated TARGET GENE. MFI2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MFI2, corresponding

to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MFI2 BINDING SITE, designated SEQ ID:10773, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47296] Another function of GAM3770 is therefore inhibition of Antigen p97 (melanoma associated) identified by monoclonal antibodies 133.2 and 96.5 (MFI2, Accession NP_201573.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MFI2.

[47297] MFN1 (Accession NP_060397.1) is another GAM3770 target gene, herein designated TARGET GENE. MFN1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MFN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MFN1 BINDING SITE, designated SEQ ID:8117, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47298] Another function of GAM3770 is therefore inhibition of

MFN1 (Accession NP_060397.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MFN1.

[47299] MFN1 (Accession NP_284941.1) is another GAM3770 target gene, herein designated TARGET GENE. MFN1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MFN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MFN1 BINDING SITE, designated SEQ ID:8117, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47300] Another function of GAM3770 is therefore inhibition of MFN1 (Accession NP_284941.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MFN1.

[47301] MGC11134 (Accession NP_113660.1) is another GAM3770 target gene, herein designated TARGET GENE. MGC11134 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC11134, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of MGC11134 BINDING SITE, designated SEQ ID:7280, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47302] Another function of GAM3770 is therefore inhibition of MGC11134 (Accession NP_113660.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC11134.

[47303] MGC21688 (Accession NP_653236.1) is another GAM3770 target gene, herein designated TARGET GENE. MGC21688 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC21688, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC21688 BINDING SITE, designated SEQ ID:10713, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47304] Another function of GAM3770 is therefore inhibition of MGC21688 (Accession NP_653236.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

MGC21688.

[47305] MGC2734 (Accession NP_149108.1) is another GAM3770 target gene, herein designated TARGET GENE. MGC2734 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC2734, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC2734 BINDING SITE, designated SEQ ID:1723, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47306] Another function of GAM3770 is therefore inhibition of MGC2734 (Accession NP_149108.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC2734.

[47307] MGC2793 (Accession NP_659501.1) is another GAM3770 target gene, herein designated TARGET GENE. MGC2793 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC2793, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

MGC2793 BINDING SITE, designated SEQ ID:13614, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47308] Another function of GAM3770 is therefore inhibition of MGC2793 (Accession NP_659501.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC2793.

[47309] MGC29649 (Accession NP_776171.1) is another GAM3770 target gene, herein designated TARGET GENE. MGC29649 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC29649, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC29649 BINDING SITE, designated SEQ ID:9449, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47310] Another function of GAM3770 is therefore inhibition of MGC29649 (Accession NP_776171.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC29649.

[47311] MGC4238 (Accession NP_115708.1) is another GAM3770 target gene, herein designated TARGET GENE. MGC4238 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC4238, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC4238 BINDING SITE, designated SEQ ID:7861, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47312] Another function of GAM3770 is therefore inhibition of MGC4238 (Accession NP_115708.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC4238.

[47313] MGC46719 (Accession NP_714924.1) is another GAM3770 target gene, herein designated TARGET GENE. MGC46719 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC46719, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC46719 BINDING SITE, designated SEQ ID:9825, to the

nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47314] Another function of GAM3770 is therefore inhibition of MGC46719 (Accession NP_714924.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC46719.

[47315] MGC5576 (Accession NP_076961.1) is another GAM3770 target gene, herein designated TARGET GENE. MGC5576 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC5576, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC5576 BINDING SITE, designated SEQ ID:11789, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47316] Another function of GAM3770 is therefore inhibition of MGC5576 (Accession NP_076961.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC5576.

[47317] Midline 1 (opitz/bbb syndrome) (MID1, Accession

NP_150632.1) is another GAM3770 target gene, herein designated TARGET GENE. MID1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MID1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MID1 BINDING SITE, designated SEQ ID:2966, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47318] Another function of GAM3770 is therefore inhibition of Midline 1 (opitz/bbb syndrome) (MID1, Accession NP_150632.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MID1.

[47319] MONDOA (Accession NP_055753.1) is another GAM3770 target gene, herein designated TARGET GENE. MONDOA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MONDOA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MONDOA BINDING SITE, designated SEQ ID:17392, to the

nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47320] Another function of GAM3770 is therefore inhibition of MONDOA (Accession NP_055753.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MONDOA.

[47321] Mitochondrial ribosomal protein l52 (MRPL52, Accession NP_848026.1) is another GAM3770 target gene, herein designated TARGET GENE. MRPL52 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MRPL52, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRPL52 BINDING SITE, designated SEQ ID:12936, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47322] Another function of GAM3770 is therefore inhibition of Mitochondrial ribosomal protein l52 (MRPL52, Accession NP_848026.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPL52.

[47323] Mitochondrial ribosomal protein l52 (MRPL52, Accession NP_851313.1) is another GAM3770 target gene, herein designated TARGET GENE. MRPL52 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MRPL52, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRPL52 BINDING SITE, designated SEQ ID:12936, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47324] Another function of GAM3770 is therefore inhibition of Mitochondrial ribosomal protein l52 (MRPL52, Accession NP_851313.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPL52.

[47325] Mitochondrial ribosomal protein l52 (MRPL52, Accession NP_851822.1) is another GAM3770 target gene, herein designated TARGET GENE. MRPL52 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MRPL52, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of MRPL52 BINDING SITE, designated SEQ ID:12936, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47326] Another function of GAM3770 is therefore inhibition of Mitochondrial ribosomal protein l52 (MRPL52, Accession NP_851822.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPL52.

[47327] Mitochondrial ribosomal protein l52 (MRPL52, Accession NP_851823.1) is another GAM3770 target gene, herein designated TARGET GENE. MRPL52 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MRPL52, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRPL52 BINDING SITE, designated SEQ ID:12936, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47328] Another function of GAM3770 is therefore inhibition of Mitochondrial ribosomal protein l52 (MRPL52, Accession NP_851823.1) . Accordingly, utilities of GAM3770 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPL52.

[47329] Mitochondrial ribosomal protein l52 (MRPL52, Accession NP_851821.1) is another GAM3770 target gene, herein designated TARGET GENE. MRPL52 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MRPL52, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRPL52 BINDING SITE, designated SEQ ID:12936, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47330] Another function of GAM3770 is therefore inhibition of Mitochondrial ribosomal protein l52 (MRPL52, Accession NP_851821.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPL52.

[47331] Mitochondrial ribosomal protein l52 (MRPL52, Accession NP_851312.1) is another GAM3770 target gene, herein designated TARGET GENE. MRPL52 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MRPL52, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRPL52 BINDING SITE, designated SEQ ID:12936, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47332] Another function of GAM3770 is therefore inhibition of Mitochondrial ribosomal protein l52 (MRPL52, Accession NP_851312.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPL52.

[47333] Mitochondrial ribosomal protein l52 (MRPL52, Accession NP_851824.1) is another GAM3770 target gene, herein designated TARGET GENE. MRPL52 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MRPL52, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRPL52 BINDING SITE, designated SEQ ID:12936, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47334] Another function of GAM3770 is therefore inhibition of

Mitochondrial ribosomal protein l52 (MRPL52, Accession NP_851824.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPL52.

[47335] MRS3/4 (Accession NP_112489.2) is another GAM3770 target gene, herein designated TARGET GENE. MRS3/4 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MRS3/4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRS3/4 BINDING SITE, designated SEQ ID:4406, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47336] Another function of GAM3770 is therefore inhibition of MRS3/4 (Accession NP_112489.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRS3/4.

[47337] Musculin (activated b-cell factor-1) (MSC, Accession NP_005089.1) is another GAM3770 target gene, herein designated TARGET GENE. MSC BINDING SITE is a target binding site found in the 5` untranslated region of mRNA

encoded by MSC, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MSC BINDING SITE, designated SEQ ID:10452, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47338] Another function of GAM3770 is therefore inhibition of Musculin (activated b-cell factor-1) (MSC, Accession NP_005089.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MSC.

[47339] Neutrophil cytosolic factor 4, 40kda (NCF4, Accession NP_000622.1) is another GAM3770 target gene, herein designated TARGET GENE. NCF4 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by NCF4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NCF4 BINDING SITE, designated SEQ ID:11268, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47340] Another function of GAM3770 is therefore inhibition of Neutrophil cytosolic factor 4, 40kda (NCF4, Accession NP_000622.1), a gene which may be important for the assembly and/or activation of the nadph- oxidase complex. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NCF4.

[47341] The function of NCF4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM967.1.NID67 (Accession NP_116565.1) is another GAM3770 target gene, herein designated TARGET GENE. NID67 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by NID67, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NID67 BINDING SITE, designated SEQ ID:1378, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47342] Another function of GAM3770 is therefore inhibition of NID67 (Accession NP_116565.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with NID67.

[47343] Nk3 transcription factor related, locus 1 (drosophila) (NKX3-1, Accession NP_006158.2) is another GAM3770 target gene, herein designated TARGET GENE. NKX3-1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NKX3-1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NKX3-1 BINDING SITE, designated SEQ ID:5499, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47344] Another function of GAM3770 is therefore inhibition of Nk3 transcription factor related, locus 1 (drosophila) (NKX3-1, Accession NP_006158.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NKX3-1.

[47345] NMNAT2 (Accession NP_055854.1) is another GAM3770 target gene, herein designated TARGET GENE. NMNAT2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by NMNAT2, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NMNAT2 BINDING SITE, designated SEQ ID:1983, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47346] Another function of GAM3770 is therefore inhibition of NMNAT2 (Accession NP_055854.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NMNAT2.

[47347] Npc1 (niemann-pick disease, type c1, gene)-like 1 (NPC1L1, Accession NP_037521.1) is another GAM3770 target gene, herein designated TARGET GENE. NPC1L1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NPC1L1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NPC1L1 BINDING SITE, designated SEQ ID:17761, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47348] Another function of GAM3770 is therefore inhibition of

Npc1 (niemann-pick disease, type c1, gene)-like 1 (NPC1L1, Accession NP_037521.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NPC1L1.

[47349] Oxidative-stress responsive 1 (OSR1, Accession NP_005100.1) is another GAM3770 target gene, herein designated TARGET GENE. OSR1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by OSR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OSR1 BINDING SITE, designated SEQ ID:8511, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47350] Another function of GAM3770 is therefore inhibition of Oxidative-stress responsive 1 (OSR1, Accession NP_005100.1), a gene which mediats stress- activated signals. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OSR1.

[47351] The function of OSR1 and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM133.1.OTOP3 (Accession XP_292588.2) is another GAM3770 target gene, herein designated TARGET GENE. OTOP3 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by OTOP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OTOP3 BINDING SITE, designated SEQ ID:11275, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47352] Another function of GAM3770 is therefore inhibition of OTOP3 (Accession XP_292588.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OTOP3.

[47353] P21(cdkn1a)-activated kinase 6 (PAK6, Accession NP_064553.1) is another GAM3770 target gene, herein designated TARGET GENE. PAK6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PAK6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of PAK6 BINDING SITE, designated SEQ ID:10797, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47354] Another function of GAM3770 is therefore inhibition of P21(cdkn1a)-activated kinase 6 (PAK6, Accession NP_064553.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PAK6.

[47355] Pas domain containing serine/threonine kinase (PASK, Accession NP_055963.1) is another GAM3770 target gene, herein designated TARGET GENE. PASK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PASK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PASK BINDING SITE, designated SEQ ID:20147, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47356] Another function of GAM3770 is therefore inhibition of Pas domain containing serine/threonine kinase (PASK, Accession NP_055963.1) . Accordingly, utilities of GAM3770

include diagnosis, prevention and treatment of diseases and clinical conditions associated with PASK.

[47357] Procollagen (type iii) n-endopeptidase (PCOLN3, Accession NP_002759.1) is another GAM3770 target gene, herein designated TARGET GENE. PCOLN3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PCOLN3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCOLN3 BINDING SITE, designated SEQ ID:2932, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47358] Another function of GAM3770 is therefore inhibition of Procollagen (type iii) n-endopeptidase (PCOLN3, Accession NP_002759.1), a gene which is a member of the zincin superfamily of zinc- dependent metalloproteases. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCOLN3.

[47359] The function of PCOLN3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM38.1.Placental growth factor, vascular endothelial growth factor-related protein (PGF, Accession NP_002623.2) is another GAM3770 target gene, herein designated TARGET GENE. PGF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PGF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PGF BINDING SITE, designated SEQ ID:11465, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47360] Another function of GAM3770 is therefore inhibition of Placental growth factor, vascular endothelial growth factor-related protein (PGF, Accession NP_002623.2), a gene which is a growth factor active in angiogenesis, and endothelial cell growth, stimulating cell proliferation and migration. it binds to receptor vegfr- 1/fl. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PGF.

[47361] The function of PGF and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM758.1.Phosphoglycerate kinase 1 (PGK1, Accession NP_000282.1) is another GAM3770 target gene, herein designated TARGET GENE. PGK1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PGK1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PGK1 BINDING SITE, designated SEQ ID:495, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47362] Another function of GAM3770 is therefore inhibition of Phosphoglycerate kinase 1 (PGK1, Accession NP_000282.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PGK1.

[47363] Phosphotidylinositol transfer protein (PITPN, Accession NP_006215.1) is another GAM3770 target gene, herein designated TARGET GENE. PITPN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PITPN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of PITPN BINDING SITE, designated SEQ ID:423, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47364] Another function of GAM3770 is therefore inhibition of Phosphotidylinositol transfer protein (PITPN, Accession NP_006215.1), a gene which catalyzes the transfer of pt-dins and phosphatidylcholine between membranes. Ac-cordingly, utilities of GAM3770 include diagnosis, preven-tion and treatment of diseases and clinical conditions as-sociated with PITPN.

[47365] The function of PITPN and its association with various dis-eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM223.1.Protein phosphatase 1, regulatory (inhibitor) subunit 12b (PPP1R12B, Accession NP_115288.1) is an-other GAM3770 target gene, herein designated TARGET GENE. PPP1R12B BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PPP1R12B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-mentarity of the nucleotide sequences of PPP1R12B BIND-ING SITE, designated SEQ ID:19376, to the nucleotide se-

quence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47366] Another function of GAM3770 is therefore inhibition of Protein phosphatase 1, regulatory (inhibitor) subunit 12b (PPP1R12B, Accession NP_115288.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPP1R12B.

[47367] Protein phosphatase 1, regulatory (inhibitor) subunit 12b (PPP1R12B, Accession NP_002472.1) is another GAM3770 target gene, herein designated TARGET GENE. PPP1R12B BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PPP1R12B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPP1R12B BINDING SITE, designated SEQ ID:19376, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47368] Another function of GAM3770 is therefore inhibition of Protein phosphatase 1, regulatory (inhibitor) subunit 12b (PPP1R12B, Accession NP_002472.1) . Accordingly, utili-

ties of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPP1R12B.

[47369] Protease, serine, 7 (enterokinase) (PRSS7, Accession NP_002763.1) is another GAM3770 target gene, herein designated TARGET GENE. PRSS7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRSS7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRSS7 BINDING SITE, designated SEQ ID:4893, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47370] Another function of GAM3770 is therefore inhibition of Protease, serine, 7 (enterokinase) (PRSS7, Accession NP_002763.1), a gene which Some of the trypsinogen genes are expressed in nonpancreatic tissues where their function is unknown and therefore is associated with Enterokinase deficiency. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of Enterokinase deficiency, and of other diseases and clinical conditions associated with PRSS7.

[47371] The function of PRSS7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1956.1.Protein tyrosine phosphatase, receptor type, r (PTPRR, Accession NP_002840.1) is another GAM3770 target gene, herein designated TARGET GENE. PTPRR BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PTPRR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTPRR BINDING SITE, designated SEQ ID:10961, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47372] Another function of GAM3770 is therefore inhibition of Protein tyrosine phosphatase, receptor type, r (PTPRR, Accession NP_002840.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTPRR.

[47373] Phosphorylase, glycogen; muscle (mcardle syndrome, glycogen storage disease type v) (PYGM, Accession NP_005600.1) is another GAM3770 target gene, herein

designated TARGET GENE. PYGM BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PYGM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PYGM BINDING SITE, designated SEQ ID:11354, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47374] Another function of GAM3770 is therefore inhibition of Phosphorylase, glycogen; muscle (mcardle syndrome, glycogen storage disease type v) (PYGM, Accession NP_005600.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PYGM.

[47375] Rab3a interacting protein (rabin3)-like 1 (RAB3IL1, Accession NP_037533.2) is another GAM3770 target gene, herein designated TARGET GENE. RAB3IL1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAB3IL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAB3IL1 BIND-

ING SITE, designated SEQ ID:7921, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47376] Another function of GAM3770 is therefore inhibition of Rab3a interacting protein (rabin3)-like 1 (RAB3IL1, Accession NP_037533.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB3IL1.

[47377] Rad52 homolog (s. cerevisiae) (RAD52, Accession NP_602296.1) is another GAM3770 target gene, herein designated TARGET GENE. RAD52 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RAD52, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAD52 BINDING SITE, designated SEQ ID:6948, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47378] Another function of GAM3770 is therefore inhibition of Rad52 homolog (s. cerevisiae) (RAD52, Accession NP_602296.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with RAD52.

[47379] Rad52 homolog (s. cerevisiae) (RAD52, Accession NP_602295.1) is another GAM3770 target gene, herein designated TARGET GENE. RAD52 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RAD52, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAD52 BINDING SITE, designated SEQ ID:6948, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47380] Another function of GAM3770 is therefore inhibition of Rad52 homolog (s. cerevisiae) (RAD52, Accession NP_602295.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAD52.

[47381] Rad52 homolog (s. cerevisiae) (RAD52, Accession NP_602294.1) is another GAM3770 target gene, herein designated TARGET GENE. RAD52 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RAD52, corresponding to a target binding site such as BINDING SITE I, BIND-

ING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAD52 BINDING SITE, designated SEQ ID:6948, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47382] Another function of GAM3770 is therefore inhibition of Rad52 homolog (s. cerevisiae) (RAD52, Accession NP_602294.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAD52.

[47383] RASSF4 (Accession NP_835281.1) is another GAM3770 target gene, herein designated TARGET GENE. RASSF4 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RASSF4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RASSF4 BINDING SITE, designated SEQ ID:725, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47384] Another function of GAM3770 is therefore inhibition of RASSF4 (Accession NP_835281.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with RASSF4.

[47385] RASSF4 (Accession NP_114412.2) is another GAM3770 target gene, herein designated TARGET GENE. RASSF4 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RASSF4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RASSF4 BINDING SITE, designated SEQ ID:725, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47386] Another function of GAM3770 is therefore inhibition of RASSF4 (Accession NP_114412.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RASSF4.

[47387] RE2 (Accession NP_722561.1) is another GAM3770 target gene, herein designated TARGET GENE. RE2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by RE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RE2 BINDING SITE, designated SEQ ID:1602, to

the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47388] Another function of GAM3770 is therefore inhibition of RE2 (Accession NP_722561.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RE2.

[47389] RE2 (Accession NP_031395.1) is another GAM3770 target gene, herein designated TARGET GENE. RE2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by RE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RE2 BINDING SITE, designated SEQ ID:1602, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47390] Another function of GAM3770 is therefore inhibition of RE2 (Accession NP_031395.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RE2.

[47391] Replication factor c (activator 1) 1, 145kda (RFC1, Accession NP_002904.2) is another GAM3770 target gene, herein designated TARGET GENE. RFC1 BINDING SITE is a

target binding site found in the 3` untranslated region of mRNA encoded by RFC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RFC1 BINDING SITE, designated SEQ ID:12616, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47392] Another function of GAM3770 is therefore inhibition of Replication factor c (activator 1) 1, 145kda (RFC1, Accession NP_002904.2), a gene which plays a role in dna transcription, replication and/or repair. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RFC1.

[47393] The function of RFC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM195.2.Ribonuclease/angiogenin inhibitor (RNH, Accession NP_002930.2) is another GAM3770 target gene, herein designated TARGET GENE. RNH BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by RNH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING

SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RNH BINDING SITE, designated SEQ ID:8721, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47394] Another function of GAM3770 is therefore inhibition of Ribonuclease/angiogenin inhibitor (RNH, Accession NP_002930.2), a gene which is an inhibitor of pancreatic rnase and angiogenin. may also function in the modulation of cellular activities. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNH.

[47395] The function of RNH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM204.2.Ribonucleotide reductase m2 polypeptide (RRM2, Accession NP_001025.1) is another GAM3770 target gene, herein designated TARGET GENE. RRM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RRM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RRM2 BIND-

ING SITE, designated SEQ ID:17167, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47396] Another function of GAM3770 is therefore inhibition of Ribonucleotide reductase m2 polypeptide (RRM2, Accession NP_001025.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RRM2.

[47397] Runt-related transcription factor 3 (RUNX3, Accession NP_004341.1) is another GAM3770 target gene, herein designated TARGET GENE. RUNX3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RUNX3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RUNX3 BINDING SITE, designated SEQ ID:16681, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47398] Another function of GAM3770 is therefore inhibition of Runt-related transcription factor 3 (RUNX3, Accession NP_004341.1), a gene which binds to the core site, 5'-pygpyggt- 3', of a number of enhancers and promoters.

Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RUNX3.

[47399] The function of RUNX3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM69.2.Syndecan 3 (n-syndecan) (SDC3, Accession NP_055469.1) is another GAM3770 target gene, herein designated TARGET GENE. SDC3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SDC3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SDC3 BINDING SITE, designated SEQ ID:5640, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47400] Another function of GAM3770 is therefore inhibition of Syndecan 3 (n-syndecan) (SDC3, Accession NP_055469.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SDC3.

[47401] Spondyloepiphyseal dysplasia, late (SEDL, Accession

NP_055378.1) is another GAM3770 target gene, herein designated TARGET GENE. SEDL BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SEDL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SEDL BINDING SITE, designated SEQ ID:1404, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47402] Another function of GAM3770 is therefore inhibition of Spondyloepiphyseal dysplasia, late (SEDL, Accession NP_055378.1), a gene which may play role in vesicular transport from endoplasmic reticulum to golgi. and therefore may be associated with Spondyloepiphyseal dysplasia. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of Spondyloepiphyseal dysplasia, and of other diseases and clinical conditions associated with SEDL.

[47403] The function of SEDL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.SIT (Accession NP_055265.1) is another

GAM3770 target gene, herein designated TARGET GENE. SIT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SIT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SIT BINDING SITE, designated SEQ ID:13417, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47404] Another function of GAM3770 is therefore inhibition of SIT (Accession NP_055265.1), a gene which recruits tyrosine phosphatase SHP2 to the cell membrane. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SIT.

[47405] The function of SIT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.1.Solute carrier family 2 (facilitated glucose transporter), member 10 (SLC2A10, Accession NP_110404.1) is another GAM3770 target gene, herein designated TARGET GENE. SLC2A10 BINDING SITE is a target binding site found in the 3` untranslated region of

mRNA encoded by SLC2A10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC2A10 BINDING SITE, designated SEQ ID:11011, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47406] Another function of GAM3770 is therefore inhibition of Solute carrier family 2 (facilitated glucose transporter), member 10 (SLC2A10, Accession NP_110404.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC2A10.

[47407] Solute carrier family 2 (facilitated glucose transporter), member 6 (SLC2A6, Accession NP_060055.1) is another GAM3770 target gene, herein designated TARGET GENE. SLC2A6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC2A6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC2A6 BINDING SITE, designated SEQ ID:10319, to the nucleotide sequence of GAM3770 RNA, herein designated

GAM RNA, also designated SEQ ID:241.

[47408] Another function of GAM3770 is therefore inhibition of Solute carrier family 2 (facilitated glucose transporter), member 6 (SLC2A6, Accession NP_060055.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC2A6.

[47409] Smith-magenis syndrome chromosome region, candidate 5 (SMCR5, Accession NP_658987.1) is another GAM3770 target gene, herein designated TARGET GENE. SMCR5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SMCR5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SMCR5 BINDING SITE, designated SEQ ID:20071, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47410] Another function of GAM3770 is therefore inhibition of Smith-magenis syndrome chromosome region, candidate 5 (SMCR5, Accession NP_658987.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SMCR5.

[47411] Survival of motor neuron 1, telomeric (SMN1, Accession NP_000335.1) is another GAM3770 target gene, herein designated TARGET GENE. SMN1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by SMN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SMN1 BINDING SITE, designated SEQ ID:3206, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47412] Another function of GAM3770 is therefore inhibition of Survival of motor neuron 1, telomeric (SMN1, Accession NP_000335.1), a gene which plays an essential role in spliceosomal snrnp assembly in the cytoplasm and therefore is associated with Spinal muscular atrophy, type i, ii,iii. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of Spinal muscular atrophy, type i, ii,iii, and of other diseases and clinical conditions associated with SMN1.

[47413] The function of SMN1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM148.2.Survival of motor neuron 1, telomeric (SMN1, Accession NP_075012.1) is another GAM3770 target gene, herein designated TARGET GENE. SMN1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by SMN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SMN1 BINDING SITE, designated SEQ ID:3206, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47414] Another function of GAM3770 is therefore inhibition of Survival of motor neuron 1, telomeric (SMN1, Accession NP_075012.1), a gene which plays an essential role in spliceosomal snrnp assembly in the cytoplasm and therefore is associated with Spinal muscular atrophy, type i, ii,iii. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of Spinal muscular atrophy, type i, ii,iii, and of other diseases and clinical conditions associated with SMN1.

[47415] The function of SMN1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM148.2.Survival of motor neuron 2, centromeric (SMN2, Accession NP_075013.1) is another GAM3770 target gene, herein designated TARGET GENE. SMN2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by SMN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SMN2 BINDING SITE, designated SEQ ID:3206, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47416] Another function of GAM3770 is therefore inhibition of Survival of motor neuron 2, centromeric (SMN2, Accession NP_075013.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SMN2.

[47417] Survival of motor neuron 2, centromeric (SMN2, Accession NP_059107.1) is another GAM3770 target gene, herein designated TARGET GENE. SMN2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by SMN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the

complementarity of the nucleotide sequences of SMN2 BINDING SITE, designated SEQ ID:3206, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47418] Another function of GAM3770 is therefore inhibition of Survival of motor neuron 2, centromeric (SMN2, Accession NP_059107.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SMN2.

[47419] Survival of motor neuron 2, centromeric (SMN2, Accession NP_075015.1) is another GAM3770 target gene, herein designated TARGET GENE. SMN2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by SMN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SMN2 BINDING SITE, designated SEQ ID:3206, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47420] Another function of GAM3770 is therefore inhibition of Survival of motor neuron 2, centromeric (SMN2, Accession NP_075015.1) . Accordingly, utilities of GAM3770 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with SMN2.

[47421] Survival of motor neuron 2, centromeric (SMN2, Accession NP_075014.1) is another GAM3770 target gene, herein designated TARGET GENE. SMN2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by SMN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SMN2 BINDING SITE, designated SEQ ID:3206, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47422] Another function of GAM3770 is therefore inhibition of Survival of motor neuron 2, centromeric (SMN2, Accession NP_075014.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SMN2.

[47423] Serine protease inhibitor-like, with kunitz and wap domains 1 (eppin) (SPINLW1, Accession NP_852479.1) is another GAM3770 target gene, herein designated TARGET GENE. SPINLW1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of

mRNA encoded by SPINLW1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SPINLW1 BINDING SITE, designated SEQ ID:18980, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47424] Another function of GAM3770 is therefore inhibition of Serine protease inhibitor-like, with kunitz and wap domains 1 (eppin) (SPINLW1, Accession NP_852479.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SPINLW1.

[47425] Sarcalumenin (SRL, Accession XP_064152.3) is another GAM3770 target gene, herein designated TARGET GENE. SRL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SRL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SRL BINDING SITE, designated SEQ ID:10846, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47426] Another function of GAM3770 is therefore inhibition of Sarcalumenin (SRL, Accession XP_064152.3) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SRL.

[47427] Serine/threonine kinase 29 (STK29, Accession NP_003948.1) is another GAM3770 target gene, herein designated TARGET GENE. STK29 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by STK29, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of STK29 BINDING SITE, designated SEQ ID:19087, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47428] Another function of GAM3770 is therefore inhibition of Serine/threonine kinase 29 (STK29, Accession NP_003948.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STK29.

[47429] SULF1 (Accession NP_055985.1) is another GAM3770 target gene, herein designated TARGET GENE. SULF1 BIND-

ING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SULF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SULF1 BINDING SITE, designated SEQ ID:12171, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47430] Another function of GAM3770 is therefore inhibition of SULF1 (Accession NP_055985.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SULF1.

[47431] Surfeit 4 (SURF4, Accession NP_149351.1) is another GAM3770 target gene, herein designated TARGET GENE. SURF4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SURF4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SURF4 BINDING SITE, designated SEQ ID:547, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47432] Another function of GAM3770 is therefore inhibition of

Surfeit 4 (SURF4, Accession NP_149351.1), a gene which is a conserved integral membrane protein containing multiple putative transmembrane regions. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SURF4.

[47433] The function of SURF4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM329.1.Transcription elongation factor a (sii), 1 (TCEA1, Accession NP_006747.1) is another GAM3770 target gene, herein designated TARGET GENE. TCEA1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TCEA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TCEA1 BINDING SITE, designated SEQ ID:10324, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47434] Another function of GAM3770 is therefore inhibition of Transcription elongation factor a (sii), 1 (TCEA1, Accession NP_006747.1), a gene which helps RNA polymerase II to transcribe past blockages. Accordingly, utilities of

GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TCEA1.

[47435] The function of TCEA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM259.1.Thymidine kinase 1, soluble (TK1, Accession NP_003249.1) is another GAM3770 target gene, herein designated TARGET GENE. TK1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TK1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TK1 BINDING SITE, designated SEQ ID:11195, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47436] Another function of GAM3770 is therefore inhibition of Thymidine kinase 1, soluble (TK1, Accession NP_003249.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TK1.

[47437] TMPRSS6 (Accession NP_694564.2) is another GAM3770 target gene, herein designated TARGET GENE. TMPRSS6

BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TMPRSS6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TMPRSS6 BINDING SITE, designated SEQ ID:18491, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47438] Another function of GAM3770 is therefore inhibition of TMPRSS6 (Accession NP_694564.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TMPRSS6.

[47439] Tumor necrosis factor receptor superfamily, member 1b (TNFRSF1B, Accession NP_001057.1) is another GAM3770 target gene, herein designated TARGET GENE. TNFRSF1B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNFRSF1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNFRSF1B BINDING SITE, designated SEQ ID:4544, to the

nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47440] Another function of GAM3770 is therefore inhibition of Tumor necrosis factor receptor superfamily, member 1b (TNFRSF1B, Accession NP_001057.1), a gene which mediates proinflammatory cellular responses. and therefore may be associated with Familial combined hyperlipidemia. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of Familial combined hyperlipidemia., and of other diseases and clinical conditions associated with TNFRSF1B.

[47441] The function of TNFRSF1B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.Topoisomerase (dna) i (TOP1, Accession NP_003277.1) is another GAM3770 target gene, herein designated TARGET GENE. TOP1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TOP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TOP1 BINDING SITE, designated SEQ ID:17569, to the nucleotide sequence of GAM3770

RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47442] Another function of GAM3770 is therefore inhibition of Topoisomerase (dna) i (TOP1, Accession NP_003277.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TOP1.

[47443] Transient receptor potential cation channel, subfamily m, member 2 (TRPM2, Accession NP_003298.1) is another GAM3770 target gene, herein designated TARGET GENE. TRPM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRPM2 BINDING SITE, designated SEQ ID:16176, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47444] Another function of GAM3770 is therefore inhibition of Transient receptor potential cation channel, subfamily m, member 2 (TRPM2, Accession NP_003298.1), a gene which may be a calcium channel. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with TRPM2.

[47445] The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.1.TSAP6 (Accession NP_060704.1) is another GAM3770 target gene, herein designated TARGET GENE. TSAP6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TSAP6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TSAP6 BINDING SITE, designated SEQ ID:17391, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47446] Another function of GAM3770 is therefore inhibition of TSAP6 (Accession NP_060704.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TSAP6.

[47447] TULP4 (Accession NP_064630.1) is another GAM3770 target gene, herein designated TARGET GENE. TULP4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TULP4, corresponding to a target binding site such as BINDING SITE I, BINDING

SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TULP4 BINDING SITE, designated SEQ ID:5367, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47448] Another function of GAM3770 is therefore inhibition of TULP4 (Accession NP_064630.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TULP4.

[47449] Thioredoxin-like 2 (TXNL2, Accession NP_006532.1) is another GAM3770 target gene, herein designated TARGET GENE. TXNL2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TXNL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TXNL2 BINDING SITE, designated SEQ ID:13570, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47450] Another function of GAM3770 is therefore inhibition of Thioredoxin-like 2 (TXNL2, Accession NP_006532.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions as-

sociated with TXNL2.

[47451] Ubiquitin-conjugating enzyme e2g 1 (ubc7 homolog, c. elegans) (UBE2G1, Accession NP_003333.1) is another GAM3770 target gene, herein designated TARGET GENE. UBE2G1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UBE2G1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UBE2G1 BINDING SITE, designated SEQ ID:14637, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47452] Another function of GAM3770 is therefore inhibition of Ubiquitin-conjugating enzyme e2g 1 (ubc7 homolog, c. elegans) (UBE2G1, Accession NP_003333.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UBE2G1.

[47453] Ubiquitination factor e4a (ufd2 homolog, yeast) (UBE4A, Accession NP_004779.1) is another GAM3770 target gene, herein designated TARGET GENE. UBE4A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UBE4A, corresponding to a target bind-

ing site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UBE4A BINDING SITE, designated SEQ ID:5235, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47454] Another function of GAM3770 is therefore inhibition of Ubiquitination factor e4a (ufd2 homolog, yeast) (UBE4A, Accession NP_004779.1), a gene which binds to the ubiquitin moieties of preformed conjugates and catalyzes ubiquitin chain assembly in conjunction with E1, E2, and E3. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UBE4A.

[47455] The function of UBE4A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM139.2.Ubiquitin carboxyl-terminal esterase l1 (ubiquitin thiolesterase) (UCHL1, Accession NP_004172.2) is another GAM3770 target gene, herein designated TARGET GENE. UCHL1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by UCHL1, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UCHL1 BINDING SITE, designated SEQ ID:5541, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47456] Another function of GAM3770 is therefore inhibition of Ubiquitin carboxyl-terminal esterase l1 (ubiquitin thiolesterase) (UCHL1, Accession NP_004172.2), a gene which is involved both in the processing of ubiquitin precursors and of ubiquinated proteins. and therefore may be associated with Parkinson disease. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of Parkinson disease, and of other diseases and clinical conditions associated with UCHL1.

[47457] The function of UCHL1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2745.2.UPLC1 (Accession NP_060177.2) is another GAM3770 target gene, herein designated TARGET GENE. UPLC1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UPLC1, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UPLC1 BINDING SITE, designated SEQ ID:10056, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47458] Another function of GAM3770 is therefore inhibition of UPLC1 (Accession NP_060177.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UPLC1.

[47459] Vasoactive intestinal peptide receptor 1 (VIPR1, Accession NP_004615.2) is another GAM3770 target gene, herein designated TARGET GENE. VIPR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by VIPR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VIPR1 BINDING SITE, designated SEQ ID:12543, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47460] Another function of GAM3770 is therefore inhibition of Vasoactive intestinal peptide receptor 1 (VIPR1, Accession NP_004615.2), a gene which binds vip and is mediated by

g proteins which activate adenylyl cyclase. Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VIPR1.

[47461] The function of VIPR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.Von willebrand factor (VWF, Accession NP_000543.1) is another GAM3770 target gene, herein designated TARGET GENE. VWF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by VWF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VWF BINDING SITE, designated SEQ ID:11547, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47462] Another function of GAM3770 is therefore inhibition of Von willebrand factor (VWF, Accession NP_000543.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VWF.

[47463] YAP (Accession NP_620830.1) is another GAM3770 target gene, herein designated TARGET GENE. YAP BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by YAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of YAP BINDING SITE, designated SEQ ID:18388, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47464] Another function of GAM3770 is therefore inhibition of YAP (Accession NP_620830.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with YAP.

[47465] YAP (Accession NP_620829.1) is another GAM3770 target gene, herein designated TARGET GENE. YAP BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by YAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of YAP BINDING SITE, designated SEQ ID:18388, to the nucleotide sequence of GAM3770 RNA, herein des-

ignated GAM RNA, also designated SEQ ID:281.

[47466] Another function of GAM3770 is therefore inhibition of YAP (Accession NP_620829.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with YAP.

[47467] YAP (Accession NP_620832.1) is another GAM3770 target gene, herein designated TARGET GENE. YAP BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by YAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of YAP BINDING SITE, designated SEQ ID:18388, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47468] Another function of GAM3770 is therefore inhibition of YAP (Accession NP_620832.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with YAP.

[47469] YAP (Accession NP_060723.2) is another GAM3770 target gene, herein designated TARGET GENE. YAP BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by YAP,

corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of YAP BINDING SITE, designated SEQ ID:18388, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47470] Another function of GAM3770 is therefore inhibition of YAP (Accession NP_060723.2) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with YAP.

[47471] YAP (Accession NP_620831.1) is another GAM3770 target gene, herein designated TARGET GENE. YAP BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by YAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of YAP BINDING SITE, designated SEQ ID:18388, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:281.

[47472] Another function of GAM3770 is therefore inhibition of YAP (Accession NP_620831.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with YAP.

[47473] ZBED4 (Accession NP_055653.1) is another GAM3770 target gene, herein designated TARGET GENE. ZBED4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZBED4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZBED4 BINDING SITE, designated SEQ ID:2237, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47474] Another function of GAM3770 is therefore inhibition of ZBED4 (Accession NP_055653.1) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZBED4.

[47475] Zinc finger protein 36, c3h type-like 2 (ZFP36L2, Accession NP_008818.3) is another GAM3770 target gene, herein designated TARGET GENE. ZFP36L2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ZFP36L2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZFP36L2 BIND-

ING SITE, designated SEQ ID:14047, to the nucleotide sequence of GAM3770 RNA, herein designated GAM RNA, also designated SEQ ID:241.

[47476] Another function of GAM3770 is therefore inhibition of Zinc finger protein 36, c3h type-like 2 (ZFP36L2, Accession NP_008818.3) . Accordingly, utilities of GAM3770 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZFP36L2.

[47477]

[47478] Fig. 8 further provides a conceptual description of a novel bioinformatically detected of the present invention, referred to here as Genomic Address Messenger 5227 (GAM5227), which modulates expression of respective target genes thereof, the function and utility of which target genes is known in the art.

[47479] GAM5227 is a novel bioinformatically detected regulatory, non protein coding, micro RNA (miRNA) gene. The method by which GAM5227 was detected is described hereinabove with reference to Figs. 8-15.

[47480] GAM5227 gene, herein designated GAM GENE, and GAM5227 target gene, herein designated TARGET GENE, are human genes contained in the human genome.

[47481] GAM5227 gene encodes a GAM5227 precursor RNA,

herein designated GAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, GAM5227 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of GAM5227 precursor RNA is designated SEQ ID:162, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:162 is located at position 200067225 relative to chromosome 1.

[47482] GAM5227 precursor RNA folds onto itself, forming GAM5227 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[47483] GAM5227 precursor RNA folds onto itself, forming GAM5227 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence

of the first half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[47484] Nucleotide sequence of GAM5227 precursor RNA, designated SEQ-ID: 162, and a schematic representation of a predicted secondary folding of GAM5227 folded precursor RNA are further described with reference to Table 2, hereby incorporated by reference.

[47485] An enzyme complex designated DICER COMPLEX, `dices` the GAM5227 folded precursor RNA into GAM5227 RNA, herein designated GAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy Group: B) nucleotide sequence of GAM5227 RNA is designated SEQ ID:299, and is provided hereinbelow with references to the sequence listing part and Table 3, hereby incorporated by reference.

[47486] GAM5227 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM5227 target RNA, herein designated GAM TARGET RNA. GAM5227

target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[47487] GAM5227 RNA, herein designated GAM RNA, binds complementarily to one or more target binding sites located in untranslated regions of GAM5227 target RNA, herein designated GAM TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of GAM5227 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the target binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limiting GAM5227 RNA may have a different number of target binding sites in untranslated regions of a GAM5227 target RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3`UTR region, this is meant as an example only these target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[47488] The complementary binding of GAM5227 RNA, herein designated GAM RNA, to target binding sites on GAM5227 target RNA, herein designated GAM TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM5227 target RNA into GAM5227 target protein, herein designated GAM TARGET PROTEIN. GAM target protein is therefore outlined by a broken line.

[47489] It is appreciated that GAM5227 target gene, herein designated TARGET GENE, in fact represents a plurality of GAM5227 target genes. The mRNA of each one of this plurality of GAM5227 target genes comprises one or more target binding sites, each having a nucleotide sequence which is at least partly complementary to GAM5227 RNA, herein designated GAM RNA, and which when bound by GAM5227 RNA causes inhibition of translation of respective one or more GAM5227 target proteins.

[47490] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 8 with specific reference to translational inhibition exerted by GAM5227 gene, herein designated GAM GENE, on one or more GAM5227 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes. As mentioned hereinabove with reference to the

background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., Perspective: Glimpses of a tiny RNA world, Science 294,779 (2001)).

[47491] It is appreciated that specific functions and accordingly utilities of GAM5227 correlate with, and may be deduced from, the identity of the target genes which GAM5227 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[47492]

[47493]

[47494] 3PAP (Accession NP_061934.2) is a GAM5227 target gene, herein designated TARGET GENE. 3PAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by 3PAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementar-

ity of the nucleotide sequences of 3PAP BINDING SITE, designated SEQ ID:18356, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47495] A function of GAM5227 is therefore inhibition of 3PAP (Accession NP_061934.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with 3PAP.

[47496] Alpha-2-macroglobulin (A2M, Accession NP_000005.1) is another GAM5227 target gene, herein designated TARGET GENE. A2M BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by A2M, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of A2M BINDING SITE, designated SEQ ID:1882, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47497] Another function of GAM5227 is therefore inhibition of Alpha-2-macroglobulin (A2M, Accession NP_000005.1), a gene which inhibit all four classes of proteinases and therefore may be associated with Alzheimer disease. Accordingly, utilities of GAM5227 include diagnosis, preven-

tion and treatment of Alzheimer disease, and of other diseases and clinical conditions associated with A2M.

[47498] The function of A2M and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1653.1.Acetyl-coenzyme a synthetase 2 (amp forming)-like (ACAS2L, Accession NP_115890.2) is another GAM5227 target gene, herein designated TARGET GENE. ACAS2L BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ACAS2L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ACAS2L BINDING SITE, designated SEQ ID:4172, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47499] Another function of GAM5227 is therefore inhibition of Acetyl-coenzyme a synthetase 2 (amp forming)-like (ACAS2L, Accession NP_115890.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ACAS2L.

[47500] Acrosomal vesicle protein 1 (ACRV1, Accession NP_064497.1) is another GAM5227 target gene, herein designated TARGET GENE. ACRV1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACRV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ACRV1 BINDING SITE, designated SEQ ID:14126, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47501] Another function of GAM5227 is therefore inhibition of Acrosomal vesicle protein 1 (ACRV1, Accession NP_064497.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ACRV1.

[47502] Acrosomal vesicle protein 1 (ACRV1, Accession NP_064495.1) is another GAM5227 target gene, herein designated TARGET GENE. ACRV1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACRV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates

the complementarity of the nucleotide sequences of ACRV1 BINDING SITE, designated SEQ ID:14126, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47503] Another function of GAM5227 is therefore inhibition of Acrosomal vesicle protein 1 (ACRV1, Accession NP_064495.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ACRV1.

[47504] Acrosomal vesicle protein 1 (ACRV1, Accession NP_064499.1) is another GAM5227 target gene, herein designated TARGET GENE. ACRV1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACRV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ACRV1 BINDING SITE, designated SEQ ID:14126, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47505] Another function of GAM5227 is therefore inhibition of Acrosomal vesicle protein 1 (ACRV1, Accession NP_064499.1) . Accordingly, utilities of GAM5227 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with ACRV1.

[47506] Acrosomal vesicle protein 1 (ACRV1, Accession NP_064454.1) is another GAM5227 target gene, herein designated TARGET GENE. ACRV1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACRV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ACRV1 BINDING SITE, designated SEQ ID:14126, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47507] Another function of GAM5227 is therefore inhibition of Acrosomal vesicle protein 1 (ACRV1, Accession NP_064454.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ACRV1.

[47508] Acrosomal vesicle protein 1 (ACRV1, Accession NP_064496.1) is another GAM5227 target gene, herein designated TARGET GENE. ACRV1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACRV1, correspond-

ing to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ACRV1 BINDING SITE, designated SEQ ID:14126, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47509] Another function of GAM5227 is therefore inhibition of Acrosomal vesicle protein 1 (ACRV1, Accession NP_064496.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ACRV1.

[47510] Acrosomal vesicle protein 1 (ACRV1, Accession NP_064500.1) is another GAM5227 target gene, herein designated TARGET GENE. ACRV1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACRV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ACRV1 BINDING SITE, designated SEQ ID:14126, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47511] Another function of GAM5227 is therefore inhibition of

Acrosomal vesicle protein 1 (ACRV1, Accession NP_064500.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ACRV1.

[47512] Acrosomal vesicle protein 1 (ACRV1, Accession NP_064492.1) is another GAM5227 target gene, herein designated TARGET GENE. ACRV1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACRV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ACRV1 BINDING SITE, designated SEQ ID:14126, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47513] Another function of GAM5227 is therefore inhibition of Acrosomal vesicle protein 1 (ACRV1, Accession NP_064492.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ACRV1.

[47514] Acrosomal vesicle protein 1 (ACRV1, Accession NP_064494.1) is another GAM5227 target gene, herein designated TARGET GENE. ACRV1 BINDING SITE is a target

binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACRV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ACRV1 BINDING SITE, designated SEQ ID:14126, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47515] Another function of GAM5227 is therefore inhibition of Acrosomal vesicle protein 1 (ACRV1, Accession NP_064494.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ACRV1.

[47516] Acrosomal vesicle protein 1 (ACRV1, Accession NP_064498.1) is another GAM5227 target gene, herein designated TARGET GENE. ACRV1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACRV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ACRV1 BINDING SITE, designated SEQ ID:14126, to the nucleotide sequence of GAM5227 RNA, herein designated

GAM RNA, also designated SEQ ID:299.

[47517] Another function of GAM5227 is therefore inhibition of Acrosomal vesicle protein 1 (ACRV1, Accession NP_064498.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ACRV1.

[47518] Acrosomal vesicle protein 1 (ACRV1, Accession NP_064493.1) is another GAM5227 target gene, herein designated TARGET GENE. ACRV1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACRV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ACRV1 BINDING SITE, designated SEQ ID:14126, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47519] Another function of GAM5227 is therefore inhibition of Acrosomal vesicle protein 1 (ACRV1, Accession NP_064493.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ACRV1.

[47520] Acrosomal vesicle protein 1 (ACRV1, Accession

NP_001603.1) is another GAM5227 target gene, herein designated TARGET GENE. ACRV1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACRV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ACRV1 BINDING SITE, designated SEQ ID:14126, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47521] Another function of GAM5227 is therefore inhibition of Acrosomal vesicle protein 1 (ACRV1, Accession NP_001603.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ACRV1.

[47522] Arp1 actin-related protein 1 homolog a, centractin alpha (yeast) (ACTR1A, Accession NP_005727.1) is another GAM5227 target gene, herein designated TARGET GENE. ACTR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ACTR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide se-

quences of ACTR1A BINDING SITE, designated SEQ ID:3042, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47523] Another function of GAM5227 is therefore inhibition of Arp1 actin-related protein 1 homolog a, centractin alpha (yeast) (ACTR1A, Accession NP_005727.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ACTR1A.

[47524] Angiomotin like 1 (AMOTL1, Accession NP_570899.1) is another GAM5227 target gene, herein designated TARGET GENE. AMOTL1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by AMOTL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AMOTL1 BINDING SITE, designated SEQ ID:11813, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47525] Another function of GAM5227 is therefore inhibition of Angiomotin like 1 (AMOTL1, Accession NP_570899.1) . Accordingly, utilities of GAM5227 include diagnosis, pre-

vention and treatment of diseases and clinical conditions associated with AMOTL1.

[47526] Adenosine monophosphate deaminase 2 (isoform l) (AMPD2, Accession NP_004028.3) is another GAM5227 target gene, herein designated TARGET GENE. AMPD2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by AMPD2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AMPD2 BINDING SITE, designated SEQ ID:6548, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47527] Another function of GAM5227 is therefore inhibition of Adenosine monophosphate deaminase 2 (isoform l) (AMPD2, Accession NP_004028.3), a gene which plays a critical role in energy metabolism. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AMPD2.

[47528] The function of AMPD2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM270.2.Annexin a5 (ANXA5, Accession

NP_001145.1) is another GAM5227 target gene, herein designated TARGET GENE. ANXA5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ANXA5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ANXA5 BINDING SITE, designated SEQ ID:2768, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47529] Another function of GAM5227 is therefore inhibition of Annexin a5 (ANXA5, Accession NP_001145.1), a gene which acts as an indirect inhibitor of the thromboplastin-specific complex. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ANXA5.

[47530] The function of ANXA5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1095.1.APA1 (Accession NP_067011.1) is another GAM5227 target gene, herein designated TARGET GENE. APA1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APA1, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APA1 BINDING SITE, designated SEQ ID:11175, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47531] Another function of GAM5227 is therefore inhibition of APA1 (Accession NP_067011.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APA1.

[47532] Rho gtpase activating protein 1 (ARHGAP1, Accession NP_004299.1) is another GAM5227 target gene, herein designated TARGET GENE. ARHGAP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARHGAP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARHGAP1 BINDING SITE, designated SEQ ID:11478, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47533] Another function of GAM5227 is therefore inhibition of Rho gtpase activating protein 1 (ARHGAP1, Accession

NP_004299.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARHGAP1.

[47534] Rho gtpase activating protein 12 (ARHGAP12, Accession NP_060757.4) is another GAM5227 target gene, herein designated TARGET GENE. ARHGAP12 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARHGAP12, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARHGAP12 BINDING SITE, designated SEQ ID:440, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47535] Another function of GAM5227 is therefore inhibition of Rho gtpase activating protein 12 (ARHGAP12, Accession NP_060757.4) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARHGAP12.

[47536] Atpase, na+/k+ transporting, alpha 2 (+) polypeptide (ATP1A2, Accession NP_000693.1) is another GAM5227 target gene, herein designated TARGET GENE. ATP1A2 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by ATP1A2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATP1A2 BINDING SITE, designated SEQ ID:14999, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47537] Another function of GAM5227 is therefore inhibition of Atpase, na+/k+ transporting, alpha 2 (+) polypeptide (ATP1A2, Accession NP_000693.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP1A2.

[47538] Udp-gal:betaglcnac beta 1,4- galactosyltransferase, polypeptide 6 (B4GALT6, Accession NP_004766.1) is another GAM5227 target gene, herein designated TARGET GENE. B4GALT6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by B4GALT6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of B4GALT6 BINDING SITE, designated SEQ ID:17518, to the nucleotide sequence of GAM5227

RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47539] Another function of GAM5227 is therefore inhibition of Udp-gal:betaglcnac beta 1,4- galactosyltransferase, polypeptide 6 (B4GALT6, Accession NP_004766.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with B4GALT6.

[47540] Bcl2-associated x protein (BAX, Accession NP_004315.1) is another GAM5227 target gene, herein designated TARGET GENE. BAX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BAX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BAX BINDING SITE, designated SEQ ID:3053, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47541] Another function of GAM5227 is therefore inhibition of Bcl2-associated x protein (BAX, Accession NP_004315.1), a gene which accelerates programmed cell death and therefore may be associated with Colorectal cancer, t- cell

acute lymphoblastic leukemia. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of Colorectal cancer, t- cell acute lymphoblastic leukemia, and of other diseases and clinical conditions associated with BAX.

[47542] The function of BAX and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM960.1.Bone morphogenetic protein 8 (osteogenic protein 2) (BMP8, Accession NP_001711.2) is another GAM5227 target gene, herein designated TARGET GENE. BMP8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BMP8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BMP8 BINDING SITE, designated SEQ ID:1565, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47543] Another function of GAM5227 is therefore inhibition of Bone morphogenetic protein 8 (osteogenic protein 2) (BMP8, Accession NP_001711.2), a gene which plays a role in calcium regulation and bone homeostasis. Accordingly,

utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BMP8.

[47544] The function of BMP8 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.1.BOP (Accession XP_097915.2) is another GAM5227 target gene, herein designated TARGET GENE. BOP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BOP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BOP BINDING SITE, designated SEQ ID:6088, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47545] Another function of GAM5227 is therefore inhibition of BOP (Accession XP_097915.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BOP.

[47546] Bernardinelli-seip congenital lipodystrophy 2 (seipin) (BSCL2, Accession NP_116056.2) is another GAM5227 target gene, herein designated TARGET GENE. BSCL2 BIND-

ING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BSCL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BSCL2 BINDING SITE, designated SEQ ID:15949, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47547] Another function of GAM5227 is therefore inhibition of Bernardinelli-seip congenital lipodystrophy 2 (seipin) (BSCL2, Accession NP_116056.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BSCL2.

[47548] Chromosome 20 open reading frame 42 (C20orf42, Accession NP_060141.2) is another GAM5227 target gene, herein designated TARGET GENE. C20orf42 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C20orf42, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf42 BINDING SITE, designated SEQ ID:16282, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA,

also designated SEQ ID:299.

[47549] Another function of GAM5227 is therefore inhibition of Chromosome 20 open reading frame 42 (C20orf42, Accession NP_060141.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf42.

[47550] Chromosome 21 open reading frame 90 (C21orf90, Accession NP_694936.1) is another GAM5227 target gene, herein designated TARGET GENE. C21orf90 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by C21orf90, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C21orf90 BINDING SITE, designated SEQ ID:13507, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47551] Another function of GAM5227 is therefore inhibition of Chromosome 21 open reading frame 90 (C21orf90, Accession NP_694936.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C21orf90.

[47552] C6orf151 (Accession NP_689764.1) is another GAM5227

target gene, herein designated TARGET GENE. C6orf151 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C6orf151, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C6orf151 BINDING SITE, designated SEQ ID:4598, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47553] Another function of GAM5227 is therefore inhibition of C6orf151 (Accession NP_689764.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C6orf151.

[47554] Calcium channel, voltage-dependent, alpha 1h subunit (CACNA1H, Accession NP_066921.1) is another GAM5227 target gene, herein designated TARGET GENE. CACNA1H BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CACNA1H, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CACNA1H BINDING SITE, designated SEQ ID:4280, to the

nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47555] Another function of GAM5227 is therefore inhibition of Calcium channel, voltage-dependent, alpha 1h subunit (CACNA1H, Accession NP_066921.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CACNA1H.

[47556] Chemokine (c-c motif) ligand 22 (CCL22, Accession NP_002981.2) is another GAM5227 target gene, herein designated TARGET GENE. CCL22 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CCL22, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCL22 BINDING SITE, designated SEQ ID:5881, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47557] Another function of GAM5227 is therefore inhibition of Chemokine (c-c motif) ligand 22 (CCL22, Accession NP_002981.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with CCL22.

[47558] Cd209 antigen (CD209, Accession NP_066978.1) is another GAM5227 target gene, herein designated TARGET GENE. CD209 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CD209, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CD209 BINDING SITE, designated SEQ ID:14170, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47559] Another function of GAM5227 is therefore inhibition of Cd209 antigen (CD209, Accession NP_066978.1), a gene which may play an important role in the CD4- independent association of HIV with cells. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CD209.

[47560] The function of CD209 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM96.1.Cd34 antigen (CD34, Accession NP_001764.1) is another GAM5227 target gene, herein

designated TARGET GENE. CD34 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CD34, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CD34 BINDING SITE, designated SEQ ID:8867, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47561] Another function of GAM5227 is therefore inhibition of Cd34 antigen (CD34, Accession NP_001764.1), a gene which is a monomeric cell surface antigen that is selectively expressed on human hematopoietic progenitor cells. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CD34.

[47562] The function of CD34 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM38.1.Cadherin 16, ksp-cadherin (CDH16, Accession NP_004053.1) is another GAM5227 target gene, herein designated TARGET GENE. CDH16 BINDING SITE is a target binding site found in the 3` untranslated region of

mRNA encoded by CDH16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDH16 BINDING SITE, designated SEQ ID:18186, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47563] Another function of GAM5227 is therefore inhibition of Cadherin 16, ksp-cadherin (CDH16, Accession NP_004053.1), a gene which is a calcium dependent cell adhesion protein. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDH16.

[47564] The function of CDH16 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM148.1.Cat eye syndrome chromosome region, candidate 1 (CECR1, Accession NP_803124.1) is another GAM5227 target gene, herein designated TARGET GENE. CECR1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CECR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CECR1 BINDING SITE, designated SEQ ID:14307, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47565] Another function of GAM5227 is therefore inhibition of Cat eye syndrome chromosome region, candidate 1 (CECR1, Accession NP_803124.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CECR1.

[47566] Cat eye syndrome chromosome region, candidate 1 (CECR1, Accession NP_059120.2) is another GAM5227 target gene, herein designated TARGET GENE. CECR1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CECR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CECR1 BINDING SITE, designated SEQ ID:14307, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47567] Another function of GAM5227 is therefore inhibition of

Cat eye syndrome chromosome region, candidate 1 (CECR1, Accession NP_059120.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CECR1.

[47568] Cyclin m4 (CNNM4, Accession NP_064569.1) is another GAM5227 target gene, herein designated TARGET GENE. CNNM4 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CNNM4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CNNM4 BINDING SITE, designated SEQ ID:14344, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47569] Another function of GAM5227 is therefore inhibition of Cyclin m4 (CNNM4, Accession NP_064569.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CNNM4.

[47570] Collagen, type xi, alpha 1 (COL11A1, Accession NP_542197.1) is another GAM5227 target gene, herein designated TARGET GENE. COL11A1 BINDING SITE is a target binding site found in the 3` untranslated region of

multiple transcripts of mRNA encoded by COL11A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COL11A1 BINDING SITE, designated SEQ ID:8352, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47571] Another function of GAM5227 is therefore inhibition of Collagen, type xi, alpha 1 (COL11A1, Accession NP_542197.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COL11A1.

[47572] Collagen, type xi, alpha 1 (COL11A1, Accession NP_001845.2) is another GAM5227 target gene, herein designated TARGET GENE. COL11A1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by COL11A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COL11A1 BINDING SITE, designated SEQ ID:8352, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47573] Another function of GAM5227 is therefore inhibition of Collagen, type xi, alpha 1 (COL11A1, Accession NP_001845.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COL11A1.

[47574] Collagen, type xi, alpha 1 (COL11A1, Accession NP_542196.1) is another GAM5227 target gene, herein designated TARGET GENE. COL11A1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by COL11A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COL11A1 BINDING SITE, designated SEQ ID:8352, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47575] Another function of GAM5227 is therefore inhibition of Collagen, type xi, alpha 1 (COL11A1, Accession NP_542196.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COL11A1.

[47576] Collectin sub-family member 10 (c-type lectin) (COLEC10, Accession NP_006429.1) is another GAM5227 target gene,

herein designated TARGET GENE. COLEC10 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by COLEC10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COLEC10 BINDING SITE, designated SEQ ID:13201, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47577] Another function of GAM5227 is therefore inhibition of Collectin sub-family member 10 (c-type lectin) (COLEC10, Accession NP_006429.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COLEC10.

[47578] Carboxypeptidase d (CPD, Accession NP_001295.2) is another GAM5227 target gene, herein designated TARGET GENE. CPD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CPD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CPD BINDING SITE, designated SEQ ID:3803, to the nucleotide sequence of GAM5227 RNA, herein designated

GAM RNA, also designated SEQ ID:299.

[47579] Another function of GAM5227 is therefore inhibition of Carboxypeptidase d (CPD, Accession NP_001295.2), a gene which is a membrane- bound metalloprotease. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CPD.

[47580] The function of CPD and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.2.Casein kinase 1, alpha 1 (CSNK1A1, Accession NP_001883.3) is another GAM5227 target gene, herein designated TARGET GENE. CSNK1A1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CSNK1A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CSNK1A1 BINDING SITE, designated SEQ ID:8360, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47581] Another function of GAM5227 is therefore inhibition of Casein kinase 1, alpha 1 (CSNK1A1, Accession

NP_001883.3) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CSNK1A1.

[47582] Catenin (cadherin-associated protein), delta 1 (CTNND1, Accession NP_001322.1) is another GAM5227 target gene, herein designated TARGET GENE. CTNND1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTNND1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CTNND1 BINDING SITE, designated SEQ ID:15067, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47583] Another function of GAM5227 is therefore inhibition of Catenin (cadherin-associated protein), delta 1 (CTNND1, Accession NP_001322.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CTNND1.

[47584] Cathepsin b (CTSB, Accession NP_680090.1) is another GAM5227 target gene, herein designated TARGET GENE. CTSB BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA en-

coded by CTSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CTSB BINDING SITE, designated SEQ ID:12008, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47585] Another function of GAM5227 is therefore inhibition of Cathepsin b (CTSB, Accession NP_680090.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CTSB.

[47586] Cathepsin b (CTSB, Accession NP_001899.1) is another GAM5227 target gene, herein designated TARGET GENE. CTSB BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CTSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CTSB BINDING SITE, designated SEQ ID:12008, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47587] Another function of GAM5227 is therefore inhibition of Cathepsin b (CTSB, Accession NP_001899.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CTSB.

[47588] Cathepsin b (CTSB, Accession NP_680092.1) is another GAM5227 target gene, herein designated TARGET GENE. CTSB BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CTSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CTSB BINDING SITE, designated SEQ ID:12008, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47589] Another function of GAM5227 is therefore inhibition of Cathepsin b (CTSB, Accession NP_680092.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CTSB.

[47590] Cathepsin b (CTSB, Accession NP_680093.1) is another GAM5227 target gene, herein designated TARGET GENE.

CTSB BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CTSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CTSB BINDING SITE, designated SEQ ID:12008, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47591] Another function of GAM5227 is therefore inhibition of Cathepsin b (CTSB, Accession NP_680093.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CTSB.

[47592] Cathepsin b (CTSB, Accession NP_680091.1) is another GAM5227 target gene, herein designated TARGET GENE. CTSB BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CTSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CTSB BINDING SITE, designated SEQ ID:12008, to the nucleotide sequence of GAM5227

RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47593] Another function of GAM5227 is therefore inhibition of Cathepsin b (CTSB, Accession NP_680091.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CTSB.

[47594] Coxsackie virus and adenovirus receptor (CXADR, Accession NP_001329.1) is another GAM5227 target gene, herein designated TARGET GENE. CXADR BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CXADR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CXADR BINDING SITE, designated SEQ ID:8611, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47595] Another function of GAM5227 is therefore inhibition of Coxsackie virus and adenovirus receptor (CXADR, Accession NP_001329.1), a gene which is a member of the immunoglobulin superfamily. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with CXADR.

[47596] The function of CXADR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM378.2.Dystroglycan 1 (dystrophin-associated glycoprotein 1) (DAG1, Accession NP_004384.1) is another GAM5227 target gene, herein designated TARGET GENE. DAG1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DAG1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DAG1 BINDING SITE, designated SEQ ID:16633, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47597] Another function of GAM5227 is therefore inhibition of Dystroglycan 1 (dystrophin-associated glycoprotein 1) (DAG1, Accession NP_004384.1), a gene which may provide linkage between the sarcolemma and extracellular matrix (ECM) and therefore may be associated with Fukuyama- type congenital muscular dystrophy. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of Fukuyama- type congenital muscular

dystrophy., and of other diseases and clinical conditions associated with DAG1.

[47598] The function of DAG1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.Defensin, theta 1 (DEFT1, Accession NP_624312.1) is another GAM5227 target gene, herein designated TARGET GENE. DEFT1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DEFT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DEFT1 BINDING SITE, designated SEQ ID:863, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47599] Another function of GAM5227 is therefore inhibition of Defensin, theta 1 (DEFT1, Accession NP_624312.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DEFT1.

[47600] Digeorge syndrome critical region gene 2 (DGCR2, Accession NP_005128.1) is another GAM5227 target gene, herein designated TARGET GENE. DGCR2 BINDING SITE is a

target binding site found in the 3` untranslated region of mRNA encoded by DGCR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DGCR2 BINDING SITE, designated SEQ ID:7719, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47601] Another function of GAM5227 is therefore inhibition of Digeorge syndrome critical region gene 2 (DGCR2, Accession NP_005128.1), a gene which is putative adhesion receptor and intervenes in cell- cell or cell- matrix interactions and therefore may be associated with Digeorge syndrome . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of Digeorge syndrome ., and of other diseases and clinical conditions associated with DGCR2.

[47602] The function of DGCR2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM84.1.Dicer1, dcr-1 homolog (drosophila) (DICER1, Accession NP_085124.2) is another GAM5227 target gene, herein designated TARGET GENE. DICER1 BINDING SITE is

a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DICER1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DICER1 BINDING SITE, designated SEQ ID:13841, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47603] Another function of GAM5227 is therefore inhibition of Dicer1, dcr-1 homolog (drosophila) (DICER1, Accession NP_085124.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DICER1.

[47604] Dicer1, dcr-1 homolog (drosophila) (DICER1, Accession NP_803187.1) is another GAM5227 target gene, herein designated TARGET GENE. DICER1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DICER1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DICER1 BINDING SITE, designated SEQ ID:13841, to the nucleotide sequence of GAM5227 RNA, herein designated

GAM RNA, also designated SEQ ID:299.

[47605] Another function of GAM5227 is therefore inhibition of Dicer1, dcr-1 homolog (drosophila) (DICER1, Accession NP_803187.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DICER1.

[47606] DKFZP434P0714 (Accession NP_115507.2) is another GAM5227 target gene, herein designated TARGET GENE. DKFZP434P0714 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by DKFZP434P0714, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434P0714 BINDING SITE, designated SEQ ID:17734, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47607] Another function of GAM5227 is therefore inhibition of DKFZP434P0714 (Accession NP_115507.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434P0714.

[47608] DKFZp547A023 (Accession NP_061174.1) is another

GAM5227 target gene, herein designated TARGET GENE. DKFZp547A023 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp547A023, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp547A023 BINDING SITE, designated SEQ ID:18504, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47609] Another function of GAM5227 is therefore inhibition of DKFZp547A023 (Accession NP_061174.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp547A023.

[47610] DKFZP586B1621 (Accession NP_056348.2) is another GAM5227 target gene, herein designated TARGET GENE. DKFZP586B1621 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by DKFZP586B1621, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP586B1621 BINDING SITE,

designated SEQ ID:1196, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47611] Another function of GAM5227 is therefore inhibition of DKFZP586B1621 (Accession NP_056348.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP586B1621.

[47612] DKFZp667G2110 (Accession NP_705833.1) is another GAM5227 target gene, herein designated TARGET GENE. DKFZp667G2110 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp667G2110, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp667G2110 BINDING SITE, designated SEQ ID:20018, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47613] Another function of GAM5227 is therefore inhibition of DKFZp667G2110 (Accession NP_705833.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with DKFZp667G2110.

[47614] DKFZp761H0421 (Accession NP_775102.1) is another GAM5227 target gene, herein designated TARGET GENE. DKFZp761H0421 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp761H0421, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761H0421 BINDING SITE, designated SEQ ID:3514, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47615] Another function of GAM5227 is therefore inhibition of DKFZp761H0421 (Accession NP_775102.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761H0421.

[47616] E2f transcription factor 3 (E2F3, Accession NP_001940.1) is another GAM5227 target gene, herein designated TARGET GENE. E2F3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by E2F3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of E2F3 BINDING SITE, designated SEQ ID:16017, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47617] Another function of GAM5227 is therefore inhibition of E2f transcription factor 3 (E2F3, Accession NP_001940.1), a gene which binds dna and controls cell- cycle progression from g1 to s phase. and therefore may be associated with Hereditary autosomal dominant myoclonus dystonia. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of Hereditary autosomal dominant myoclonus dystonia, and of other diseases and clinical conditions associated with E2F3.

[47618] The function of E2F3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.1.Endothelial differentiation-related factor 1 (EDF1, Accession NP_003783.1) is another GAM5227 target gene, herein designated TARGET GENE. EDF1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by EDF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4

illustrates the complementarity of the nucleotide sequences of EDF1 BINDING SITE, designated SEQ ID:535, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47619] Another function of GAM5227 is therefore inhibition of Endothelial differentiation-related factor 1 (EDF1, Accession NP_003783.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EDF1.

[47620] Epidermal growth factor receptor (erythroblastic leukemia viral (v-erb-b) oncogene homolog, avian) (EGFR, Accession NP_005219.2) is another GAM5227 target gene, herein designated TARGET GENE. EGFR BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by EGFR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EGFR BINDING SITE, designated SEQ ID:7441, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47621] Another function of GAM5227 is therefore inhibition of Epidermal growth factor receptor (erythroblastic leukemia

viral (v-erb-b) oncogene homolog, avian) (EGFR, Accession NP_005219.2), a gene which is a receptor for egf, but also for other members of the egf family. and therefore may be associated with Colon cancer, silver- russell syndrome. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of Colon cancer, silver- russell syndrome, and of other diseases and clinical conditions associated with EGFR.

[47622] The function of EGFR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM148.2.Engulfment and cell motility 2 (ced-12 homolog, c. elegans) (ELMO2, Accession NP_071369.4) is another GAM5227 target gene, herein designated TARGET GENE. ELMO2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by ELMO2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ELMO2 BINDING SITE, designated SEQ ID:15621, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47623] Another function of GAM5227 is therefore inhibition of Engulfment and cell motility 2 (ced-12 homolog, c. elegans) (ELMO2, Accession NP_071369.4) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ELMO2.

[47624] Engulfment and cell motility 2 (ced-12 homolog, c. elegans) (ELMO2, Accession NP_573403.1) is another GAM5227 target gene, herein designated TARGET GENE. ELMO2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by ELMO2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ELMO2 BINDING SITE, designated SEQ ID:15621, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47625] Another function of GAM5227 is therefore inhibition of Engulfment and cell motility 2 (ced-12 homolog, c. elegans) (ELMO2, Accession NP_573403.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with ELMO2.

[47626] ENT4 (Accession NP_694979.1) is another GAM5227 target gene, herein designated TARGET GENE. ENT4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ENT4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ENT4 BINDING SITE, designated SEQ ID:8473, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47627] Another function of GAM5227 is therefore inhibition of ENT4 (Accession NP_694979.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ENT4.

[47628] FAD104 (Accession NP_073600.2) is another GAM5227 target gene, herein designated TARGET GENE. FAD104 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FAD104, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FAD104 BINDING SITE, designated SEQ ID:19708, to the

nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47629] Another function of GAM5227 is therefore inhibition of FAD104 (Accession NP_073600.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FAD104.

[47630] FAT3 (Accession XP_061871.5) is another GAM5227 target gene, herein designated TARGET GENE. FAT3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FAT3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FAT3 BINDING SITE, designated SEQ ID:7573, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47631] Another function of GAM5227 is therefore inhibition of FAT3 (Accession XP_061871.5) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FAT3.

[47632] FBXW8 (Accession NP_036306.1) is another GAM5227 target gene, herein designated TARGET GENE. FBXW8 BIND-

ING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FBXW8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FBXW8 BINDING SITE, designated SEQ ID:11502, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47633] Another function of GAM5227 is therefore inhibition of FBXW8 (Accession NP_036306.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FBXW8.

[47634] FBXW8 (Accession NP_699179.2) is another GAM5227 target gene, herein designated TARGET GENE. FBXW8 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FBXW8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FBXW8 BINDING SITE, designated SEQ ID:11502, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ

ID:299.

[47635] Another function of GAM5227 is therefore inhibition of FBXW8 (Accession NP_699179.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FBXW8.

[47636] FLJ00026 (Accession XP_036307.7) is another GAM5227 target gene, herein designated TARGET GENE. FLJ00026 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ00026, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ00026 BINDING SITE, designated SEQ ID:10221, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47637] Another function of GAM5227 is therefore inhibition of FLJ00026 (Accession XP_036307.7) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ00026.

[47638] FLJ00225 (Accession XP_084552.3) is another GAM5227 target gene, herein designated TARGET GENE. FLJ00225 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by FLJ00225, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ00225 BINDING SITE, designated SEQ ID:13481, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47639] Another function of GAM5227 is therefore inhibition of FLJ00225 (Accession XP_084552.3) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ00225.

[47640] FLJ10074 (Accession NP_060458.2) is another GAM5227 target gene, herein designated TARGET GENE. FLJ10074 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10074, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10074 BINDING SITE, designated SEQ ID:18487, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47641] Another function of GAM5227 is therefore inhibition of

FLJ10074 (Accession NP_060458.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10074.

[47642] FLJ10097 (Accession XP_043653.1) is another GAM5227 target gene, herein designated TARGET GENE. FLJ10097 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10097, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10097 BINDING SITE, designated SEQ ID:10680, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47643] Another function of GAM5227 is therefore inhibition of FLJ10097 (Accession XP_043653.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10097.

[47644] FLJ10260 (Accession NP_060512.2) is another GAM5227 target gene, herein designated TARGET GENE. FLJ10260 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ10260, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10260 BINDING SITE, designated SEQ ID:2454, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47645] Another function of GAM5227 is therefore inhibition of FLJ10260 (Accession NP_060512.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10260.

[47646] FLJ10420 (Accession NP_060560.1) is another GAM5227 target gene, herein designated TARGET GENE. FLJ10420 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10420, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10420 BINDING SITE, designated SEQ ID:1979, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47647] Another function of GAM5227 is therefore inhibition of FLJ10420 (Accession NP_060560.1) . Accordingly, utilities

of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10420.

[47648] FLJ12505 (Accession NP_079025.1) is another GAM5227 target gene, herein designated TARGET GENE. FLJ12505 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12505, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12505 BINDING SITE, designated SEQ ID:8025, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47649] Another function of GAM5227 is therefore inhibition of FLJ12505 (Accession NP_079025.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12505.

[47650] FLJ12975 (Accession NP_079085.2) is another GAM5227 target gene, herein designated TARGET GENE. FLJ12975 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12975, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12975 BINDING SITE, designated SEQ ID:11304, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47651] Another function of GAM5227 is therefore inhibition of FLJ12975 (Accession NP_079085.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12975.

[47652] FLJ13114 (Accession NP_078817.1) is another GAM5227 target gene, herein designated TARGET GENE. FLJ13114 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13114, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13114 BINDING SITE, designated SEQ ID:5150, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47653] Another function of GAM5227 is therefore inhibition of FLJ13114 (Accession NP_078817.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ13114.

[47654] FLJ20254 (Accession NP_060197.2) is another GAM5227 target gene, herein designated TARGET GENE. FLJ20254 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20254, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20254 BINDING SITE, designated SEQ ID:9250, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47655] Another function of GAM5227 is therefore inhibition of FLJ20254 (Accession NP_060197.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20254.

[47656] FLJ23510 (Accession NP_078996.1) is another GAM5227 target gene, herein designated TARGET GENE. FLJ23510 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ23510, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ23510 BINDING SITE, designated SEQ ID:10450, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47657] Another function of GAM5227 is therefore inhibition of FLJ23510 (Accession NP_078996.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23510.

[47658] FLJ31713 (Accession NP_689788.1) is another GAM5227 target gene, herein designated TARGET GENE. FLJ31713 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ31713, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31713 BINDING SITE, designated SEQ ID:8441, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47659] Another function of GAM5227 is therefore inhibition of FLJ31713 (Accession NP_689788.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ31713.

[47660] FLJ37478 (Accession NP_848652.1) is another GAM5227 target gene, herein designated TARGET GENE. FLJ37478 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ37478, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ37478 BINDING SITE, designated SEQ ID:11160, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47661] Another function of GAM5227 is therefore inhibition of FLJ37478 (Accession NP_848652.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ37478.

[47662] FLJ38608 (Accession NP_694947.1) is another GAM5227 target gene, herein designated TARGET GENE. FLJ38608 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ38608, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ38608 BINDING SITE, designated SEQ ID:8113, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47663] Another function of GAM5227 is therefore inhibition of FLJ38608 (Accession NP_694947.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38608.

[47664] FLJ38690 (Accession NP_848608.1) is another GAM5227 target gene, herein designated TARGET GENE. FLJ38690 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ38690, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38690 BINDING SITE, designated SEQ ID:5440, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47665] Another function of GAM5227 is therefore inhibition of FLJ38690 (Accession NP_848608.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38690.

[47666] FLJ39116 (Accession NP_689848.1) is another GAM5227 target gene, herein designated TARGET GENE. FLJ39116 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ39116, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ39116 BINDING SITE, designated SEQ ID:19608, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47667] Another function of GAM5227 is therefore inhibition of FLJ39116 (Accession NP_689848.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ39116.

[47668] FLJ39599 (Accession NP_776164.1) is another GAM5227 target gene, herein designated TARGET GENE. FLJ39599 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ39599, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ39599 BINDING SITE, designated SEQ ID:11751, to the

nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47669] Another function of GAM5227 is therefore inhibition of FLJ39599 (Accession NP_776164.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ39599.

[47670] FLJ39647 (Accession NP_775896.2) is another GAM5227 target gene, herein designated TARGET GENE. FLJ39647 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ39647, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ39647 BINDING SITE, designated SEQ ID:14874, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47671] Another function of GAM5227 is therefore inhibition of FLJ39647 (Accession NP_775896.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ39647.

[47672] Frequently rearranged in advanced t-cell lymphomas

(FRAT1, Accession NP_005470.2) is another GAM5227 target gene, herein designated TARGET GENE. FRAT1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FRAT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FRAT1 BINDING SITE, designated SEQ ID:11515, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47673] Another function of GAM5227 is therefore inhibition of Frequently rearranged in advanced t-cell lymphomas (FRAT1, Accession NP_005470.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FRAT1.

[47674] Frequently rearranged in advanced t-cell lymphomas (FRAT1, Accession NP_852000.1) is another GAM5227 target gene, herein designated TARGET GENE. FRAT1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FRAT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FRAT1 BINDING SITE, designated SEQ ID:11515, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47675] Another function of GAM5227 is therefore inhibition of Frequently rearranged in advanced t-cell lymphomas (FRAT1, Accession NP_852000.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FRAT1.

[47676] Fyve and coiled-coil domain containing 1 (FYCO1, Accession NP_078789.1) is another GAM5227 target gene, herein designated TARGET GENE. FYCO1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FYCO1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FYCO1 BINDING SITE, designated SEQ ID:653, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47677] Another function of GAM5227 is therefore inhibition of Fyve and coiled-coil domain containing 1 (FYCO1, Acces-

sion NP_078789.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FYCO1.

[47678] Frizzled homolog 4 (drosophila) (FZD4, Accession NP_036325.2) is another GAM5227 target gene, herein designated TARGET GENE. FZD4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FZD4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FZD4 BINDING SITE, designated SEQ ID:19026, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47679] Another function of GAM5227 is therefore inhibition of Frizzled homolog 4 (drosophila) (FZD4, Accession NP_036325.2), a gene which may function in cell polarity, cell fate specification and cancer; similar to frizzled receptor family, has seven transmembrane domains and therefore may be associated with Familial exudative vitreoretinopathy. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of Familial exudative vitreoretinopathy., and of other diseases and clinical con-

ditions associated with FZD4.

[47680] The function of FZD4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM67.1.Glutamate-cysteine ligase, modifier subunit (GCLM, Accession NP_002052.1) is another GAM5227 target gene, herein designated TARGET GENE. GCLM BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GCLM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GCLM BINDING SITE, designated SEQ ID:4027, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47681] Another function of GAM5227 is therefore inhibition of Glutamate-cysteine ligase, modifier subunit (GCLM, Accession NP_002052.1), a gene which is GLUTAMATE- CYSTEINE LIGASE. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GCLM.

[47682] The function of GCLM and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM879.1.G protein-coupled receptor 4 (GPR4, Accession NP_005273.1) is another GAM5227 target gene, herein designated TARGET GENE. GPR4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GPR4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPR4 BINDING SITE, designated SEQ ID:13775, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47683] Another function of GAM5227 is therefore inhibition of G protein-coupled receptor 4 (GPR4, Accession NP_005273.1), a gene which stimulates to produce increased calcium by both SPC and LPC . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPR4.

[47684] The function of GPR4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.G1 to s phase transition 1 (GSPT1, Accession

NP_002085.1) is another GAM5227 target gene, herein designated TARGET GENE. GSPT1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by GSPT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GSPT1 BINDING SITE, designated SEQ ID:10693, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47685] Another function of GAM5227 is therefore inhibition of G1 to s phase transition 1 (GSPT1, Accession NP_002085.1), a gene which involves in regulation of mammalian cell growth. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GSPT1.

[47686] The function of GSPT1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM229.1.H41 (Accession NP_060018.1) is another GAM5227 target gene, herein designated TARGET GENE. H41 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by H41, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of H41 BINDING SITE, designated SEQ ID:15147, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47687] Another function of GAM5227 is therefore inhibition of H41 (Accession NP_060018.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with H41.

[47688] Hyaluronan synthase 2 (HAS2, Accession NP_005319.1) is another GAM5227 target gene, herein designated TARGET GENE. HAS2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HAS2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HAS2 BINDING SITE, designated SEQ ID:15347, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47689] Another function of GAM5227 is therefore inhibition of Hyaluronan synthase 2 (HAS2, Accession NP_005319.1), a gene which plays a role in hyaluronan/hyaluronic acid (ha)

synthesis and transport . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HAS2.

[47690] The function of HAS2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM715.1.Hypoxia-inducible factor 1, alpha subunit inhibitor (HIF1AN, Accession NP_060372.1) is another GAM5227 target gene, herein designated TARGET GENE. HIF1AN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HIF1AN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HIF1AN BINDING SITE, designated SEQ ID:8091, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47691] Another function of GAM5227 is therefore inhibition of Hypoxia-inducible factor 1, alpha subunit inhibitor (HIF1AN, Accession NP_060372.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HIF1AN.

[47692] HN1L (Accession NP_653171.1) is another GAM5227 target gene, herein designated TARGET GENE. HN1L BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HN1L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HN1L BINDING SITE, designated SEQ ID:6999, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47693] Another function of GAM5227 is therefore inhibition of HN1L (Accession NP_653171.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HN1L.

[47694] Heparan sulfate (glucosamine) 3-o-sulfotransferase 2 (HS3ST2, Accession NP_006034.1) is another GAM5227 target gene, herein designated TARGET GENE. HS3ST2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HS3ST2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HS3ST2 BINDING SITE, designated SEQ ID:10566, to the

nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47695] Another function of GAM5227 is therefore inhibition of Heparan sulfate (glucosamine) 3-o-sulfotransferase 2 (HS3ST2, Accession NP_006034.1), a gene which plays a role in the generation of heparan sulfate proteoglycan. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HS3ST2.

[47696] The function of HS3ST2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM767.1.Indian hedgehog homolog (drosophila) (IHH, Accession XP_050846.3) is another GAM5227 target gene, herein designated TARGET GENE. IHH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IHH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IHH BINDING SITE, designated SEQ ID:762, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47697] Another function of GAM5227 is therefore inhibition of

Indian hedgehog homolog (drosophila) (IHH, Accession XP_050846.3), a gene which intercellular signal essential for a variety of patterning events during development. binds to the patched (ptc) receptor, which functions in association with smoothened (smo), to activate the transcription of target genes. implicated in endochondral ossification: may regulate the balance between growth and ossification of the developing bones. induces the expression of parathyroid hormone- related protein (pthrp) (by similarity). and therefore is associated with Brachydactyly type a1. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of Brachydactyly type a1, and of other diseases and clinical conditions associated with IHH.

[47698] The function of IHH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM206.1.Interleukin 1 family, member 8 (eta) (IL1F8, Accession NP_055253.2) is another GAM5227 target gene, herein designated TARGET GENE. IL1F8 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by IL1F8, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL1F8 BINDING SITE, designated SEQ ID:2378, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47699] Another function of GAM5227 is therefore inhibition of Interleukin 1 family, member 8 (eta) (IL1F8, Accession NP_055253.2), a gene which initiates and promotes the host response to injury or infection by activating a set of transcription factors. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL1F8.

[47700] The function of IL1F8 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM488.1.Interleukin 1 family, member 8 (eta) (IL1F8, Accession NP_775270.1) is another GAM5227 target gene, herein designated TARGET GENE. IL1F8 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by IL1F8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

IL1F8 BINDING SITE, designated SEQ ID:2378, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47701] Another function of GAM5227 is therefore inhibition of Interleukin 1 family, member 8 (eta) (IL1F8, Accession NP_775270.1), a gene which initiates and promotes the host response to injury or infection by activating a set of transcription factors. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL1F8.

[47702] The function of IL1F8 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM488.1.Interleukin 1 receptor, type i (IL1R1, Accession NP_000868.1) is another GAM5227 target gene, herein designated TARGET GENE. IL1R1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1R1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL1R1 BINDING SITE, designated SEQ ID:7235, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:299.

[47703] Another function of GAM5227 is therefore inhibition of Interleukin 1 receptor, type i (IL1R1, Accession NP_000868.1), a gene which is a receptor for interleukin-1 alpha (il- 1a), beta (il- 1b), and interleukin- 1 receptor antagonist protein (il- 1ra). Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL1R1.

[47704] The function of IL1R1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM40.1.Interleukin 1 receptor accessory protein (IL1RAP, Accession NP_002173.1) is another GAM5227 target gene, herein designated TARGET GENE. IL1RAP BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by IL1RAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL1RAP BINDING SITE, designated SEQ ID:19607, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47705] Another function of GAM5227 is therefore inhibition of Interleukin 1 receptor accessory protein (IL1RAP, Accession NP_002173.1), a gene which may function as a membrane receptor. promotes heterophilic cellular adhesion. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL1RAP.

[47706] The function of IL1RAP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.2.IMP-2 (Accession NP_006539.2) is another GAM5227 target gene, herein designated TARGET GENE. IMP-2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IMP-2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IMP-2 BINDING SITE, designated SEQ ID:9919, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47707] Another function of GAM5227 is therefore inhibition of IMP-2 (Accession NP_006539.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with IMP-2.

[47708] KIAA0140 (Accession NP_055476.1) is another GAM5227 target gene, herein designated TARGET GENE. KIAA0140 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0140, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0140 BINDING SITE, designated SEQ ID:9212, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47709] Another function of GAM5227 is therefore inhibition of KIAA0140 (Accession NP_055476.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0140.

[47710] KIAA0157 (Accession NP_115558.2) is another GAM5227 target gene, herein designated TARGET GENE. KIAA0157 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0157, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

KIAA0157 BINDING SITE, designated SEQ ID:13266, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47711] Another function of GAM5227 is therefore inhibition of KIAA0157 (Accession NP_115558.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0157.

[47712] KIAA0232 (Accession XP_291106.1) is another GAM5227 target gene, herein designated TARGET GENE. KIAA0232 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0232, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0232 BINDING SITE, designated SEQ ID:17412, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47713] Another function of GAM5227 is therefore inhibition of KIAA0232 (Accession XP_291106.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0232.

[47714] KIAA0268 (Accession XP_300768.1) is another GAM5227 target gene, herein designated TARGET GENE. KIAA0268 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0268, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0268 BINDING SITE, designated SEQ ID:9788, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47715] Another function of GAM5227 is therefore inhibition of KIAA0268 (Accession XP_300768.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0268.

[47716] KIAA0295 (Accession XP_042833.2) is another GAM5227 target gene, herein designated TARGET GENE. KIAA0295 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0295, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0295 BINDING SITE, designated SEQ ID:19557, to the

nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47717] Another function of GAM5227 is therefore inhibition of KIAA0295 (Accession XP_042833.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0295.

[47718] KIAA0367 (Accession XP_041018.2) is another GAM5227 target gene, herein designated TARGET GENE. KIAA0367 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0367, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0367 BINDING SITE, designated SEQ ID:10082, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47719] Another function of GAM5227 is therefore inhibition of KIAA0367 (Accession XP_041018.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0367.

[47720] KIAA0514 (Accession NP_055511.1) is another GAM5227

target gene, herein designated TARGET GENE. KIAA0514 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0514, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0514 BINDING SITE, designated SEQ ID:15950, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47721] Another function of GAM5227 is therefore inhibition of KIAA0514 (Accession NP_055511.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0514.

[47722] KIAA0721 (Accession NP_067680.2) is another GAM5227 target gene, herein designated TARGET GENE. KIAA0721 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0721, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0721 BINDING SITE, designated SEQ ID:19760, to the nucleotide sequence of GAM5227 RNA, herein designated

GAM RNA, also designated SEQ ID:299.

[47723] Another function of GAM5227 is therefore inhibition of KIAA0721 (Accession NP_067680.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0721.

[47724] KIAA1136 (Accession XP_166110.3) is another GAM5227 target gene, herein designated TARGET GENE. KIAA1136 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1136, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1136 BINDING SITE, designated SEQ ID:12332, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47725] Another function of GAM5227 is therefore inhibition of KIAA1136 (Accession XP_166110.3) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1136.

[47726] KIAA1157 (Accession XP_051093.2) is another GAM5227 target gene, herein designated TARGET GENE. KIAA1157

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1157, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1157 BINDING SITE, designated SEQ ID:7957, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47727] Another function of GAM5227 is therefore inhibition of KIAA1157 (Accession XP_051093.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1157.

[47728] KIAA1446 (Accession NP_065887.1) is another GAM5227 target gene, herein designated TARGET GENE. KIAA1446 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1446, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1446 BINDING SITE, designated SEQ ID:6089, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47729] Another function of GAM5227 is therefore inhibition of KIAA1446 (Accession NP_065887.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1446.

[47730] KIAA1822 (Accession XP_041566.2) is another GAM5227 target gene, herein designated TARGET GENE. KIAA1822 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1822, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1822 BINDING SITE, designated SEQ ID:17711, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47731] Another function of GAM5227 is therefore inhibition of KIAA1822 (Accession XP_041566.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1822.

[47732] KIAA1854 (Accession XP_049884.1) is another GAM5227 target gene, herein designated TARGET GENE. KIAA1854 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by KIAA1854, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1854 BINDING SITE, designated SEQ ID:9010, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47733] Another function of GAM5227 is therefore inhibition of KIAA1854 (Accession XP_049884.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1854.

[47734] KIAA1879 (Accession XP_056635.1) is another GAM5227 target gene, herein designated TARGET GENE. KIAA1879 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA1879, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1879 BINDING SITE, designated SEQ ID:15546, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47735] Another function of GAM5227 is therefore inhibition of

KIAA1879 (Accession XP_056635.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1879.

[47736] Kruppel-like factor 12 (KLF12, Accession NP_009180.3) is another GAM5227 target gene, herein designated TARGET GENE. KLF12 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by KLF12, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KLF12 BINDING SITE, designated SEQ ID:5272, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47737] Another function of GAM5227 is therefore inhibition of Kruppel-like factor 12 (KLF12, Accession NP_009180.3) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KLF12.

[47738] Low density lipoprotein receptor (familial hypercholesterolemia) (LDLR, Accession NP_000518.1) is another GAM5227 target gene, herein designated TARGET GENE.

LDLR BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LDLR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LDLR BINDING SITE, designated SEQ ID:9706, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47739] Another function of GAM5227 is therefore inhibition of Low density lipoprotein receptor (familial hypercholesterolemia) (LDLR, Accession NP_000518.1), a gene which also acts as a tumor suppressor. and therefore is associated with Familial hypercholesterolemia. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of Familial hypercholesterolemia, and of other diseases and clinical conditions associated with LDLR.

[47740] The function of LDLR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.1.Lim homeobox 9 (LHX9, Accession NP_064589.1) is another GAM5227 target gene, herein designated TARGET GENE. LHX9 BINDING SITE is a target binding site found in the 5` untranslated region of multi-

ple transcripts of mRNA encoded by LHX9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LHX9 BINDING SITE, designated SEQ ID:7190, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47741] Another function of GAM5227 is therefore inhibition of Lim homeobox 9 (LHX9, Accession NP_064589.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LHX9.

[47742] LOC115131 (Accession NP_660285.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC115131 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC115131, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC115131 BINDING SITE, designated SEQ ID:9407, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47743] Another function of GAM5227 is therefore inhibition of LOC115131 (Accession NP_660285.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC115131.

[47744] LOC143310 (Accession XP_084485.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC143310 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC143310, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC143310 BINDING SITE, designated SEQ ID:1541, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47745] Another function of GAM5227 is therefore inhibition of LOC143310 (Accession XP_084485.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC143310.

[47746] LOC145453 (Accession XP_085120.1) is another GAM5227 target gene, herein designated TARGET GENE.

LOC145453 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC145453, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145453 BINDING SITE, designated SEQ ID:1961, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47747] Another function of GAM5227 is therefore inhibition of LOC145453 (Accession XP_085120.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145453.

[47748] LOC145601 (Accession XP_096816.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC145601 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC145601, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145601 BINDING SITE, designated SEQ ID:1398, to the nucleotide sequence of

GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47749] Another function of GAM5227 is therefore inhibition of LOC145601 (Accession XP_096816.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145601.

[47750] LOC145725 (Accession XP_085211.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC145725 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC145725, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145725 BINDING SITE, designated SEQ ID:17221, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47751] Another function of GAM5227 is therefore inhibition of LOC145725 (Accession XP_085211.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145725.

[47752] LOC145845 (Accession XP_096884.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC145845 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC145845, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145845 BINDING SITE, designated SEQ ID:19334, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47753] Another function of GAM5227 is therefore inhibition of LOC145845 (Accession XP_096884.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145845.

[47754] LOC146272 (Accession XP_085396.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC146272 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC146272, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC146272 BINDING SITE, designated SEQ ID:10066, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47755] Another function of GAM5227 is therefore inhibition of LOC146272 (Accession XP_085396.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146272.

[47756] LOC151234 (Accession XP_087136.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC151234 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC151234, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151234 BINDING SITE, designated SEQ ID:16533, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47757] Another function of GAM5227 is therefore inhibition of LOC151234 (Accession XP_087136.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC151234.

[47758] LOC152078 (Accession XP_087376.2) is another GAM5227 target gene, herein designated TARGET GENE. LOC152078 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC152078, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152078 BINDING SITE, designated SEQ ID:16522, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47759] Another function of GAM5227 is therefore inhibition of LOC152078 (Accession XP_087376.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152078.

[47760] LOC153577 (Accession XP_098394.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC153577 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC153577, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC153577 BINDING SITE, designated SEQ ID:10222, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47761] Another function of GAM5227 is therefore inhibition of LOC153577 (Accession XP_098394.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153577.

[47762] LOC154834 (Accession XP_098621.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC154834 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC154834, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC154834 BINDING SITE, designated SEQ ID:7900, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47763] Another function of GAM5227 is therefore inhibition of

LOC154834 (Accession XP_098621.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC154834.

[47764] LOC154877 (Accession XP_098626.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC154877 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC154877, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC154877 BINDING SITE, designated SEQ ID:17668, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47765] Another function of GAM5227 is therefore inhibition of LOC154877 (Accession XP_098626.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC154877.

[47766] LOC161635 (Accession XP_172921.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC161635 BINDING SITE is a target binding site found in

the 5` untranslated region of mRNA encoded by LOC161635, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC161635 BINDING SITE, designated SEQ ID:11973, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47767] Another function of GAM5227 is therefore inhibition of LOC161635 (Accession XP_172921.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC161635.

[47768] LOC164580 (Accession XP_104562.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC164580 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC164580, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC164580 BINDING SITE, designated SEQ ID:1232, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:299.

[47769] Another function of GAM5227 is therefore inhibition of LOC164580 (Accession XP_104562.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC164580.

[47770] LOC199692 (Accession NP_660338.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC199692 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC199692, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC199692 BINDING SITE, designated SEQ ID:17021, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47771] Another function of GAM5227 is therefore inhibition of LOC199692 (Accession NP_660338.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC199692.

[47772] LOC200574 (Accession XP_114264.1) is another

GAM5227 target gene, herein designated TARGET GENE. LOC200574 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC200574, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC200574 BINDING SITE, designated SEQ ID:5245, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47773] Another function of GAM5227 is therefore inhibition of LOC200574 (Accession XP_114264.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC200574.

[47774] LOC200681 (Accession XP_117260.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC200681 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC200681, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC200681 BINDING SITE, desig-

nated SEQ ID:15034, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47775] Another function of GAM5227 is therefore inhibition of LOC200681 (Accession XP_117260.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC200681.

[47776] LOC201194 (Accession XP_117061.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC201194 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC201194, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC201194 BINDING SITE, designated SEQ ID:2742, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47777] Another function of GAM5227 is therefore inhibition of LOC201194 (Accession XP_117061.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC201194.

[47778] LOC222252 (Accession XP_168640.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC222252 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC222252, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC222252 BINDING SITE, designated SEQ ID:13169, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47779] Another function of GAM5227 is therefore inhibition of LOC222252 (Accession XP_168640.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC222252.

[47780] LOC254128 (Accession XP_171004.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC254128 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC254128, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC254128 BINDING SITE, designated SEQ ID:2157, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47781] Another function of GAM5227 is therefore inhibition of LOC254128 (Accession XP_171004.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC254128.

[47782] LOC254544 (Accession XP_172947.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC254544 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC254544, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC254544 BINDING SITE, designated SEQ ID:3693, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47783] Another function of GAM5227 is therefore inhibition of LOC254544 (Accession XP_172947.1) . Accordingly, utili-

ties of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC254544.

[47784] LOC254556 (Accession XP_170588.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC254556 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC254556, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC254556 BINDING SITE, designated SEQ ID:13871, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47785] Another function of GAM5227 is therefore inhibition of LOC254556 (Accession XP_170588.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC254556.

[47786] LOC283018 (Accession XP_208026.2) is another GAM5227 target gene, herein designated TARGET GENE. LOC283018 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by

LOC283018, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283018 BINDING SITE, designated SEQ ID:9893, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47787] Another function of GAM5227 is therefore inhibition of LOC283018 (Accession XP_208026.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283018.

[47788] LOC283107 (Accession XP_210889.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC283107 BINDING SITE1 and LOC283107 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283107, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283107 BINDING SITE1 and LOC283107 BINDING SITE2, designated SEQ ID:10191 and SEQ ID:13094 respectively, to the nucleotide sequence of GAM5227 RNA, herein designated

GAM RNA, also designated SEQ ID:299.

[47789] Another function of GAM5227 is therefore inhibition of LOC283107 (Accession XP_210889.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283107.

[47790] LOC283153 (Accession XP_208532.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC283153 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283153, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283153 BINDING SITE, designated SEQ ID:13811, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47791] Another function of GAM5227 is therefore inhibition of LOC283153 (Accession XP_208532.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283153.

[47792] LOC283332 (Accession XP_210976.1) is another

GAM5227 target gene, herein designated TARGET GENE. LOC283332 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283332, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283332 BINDING SITE, designated SEQ ID:19526, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47793] Another function of GAM5227 is therefore inhibition of LOC283332 (Accession XP_210976.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283332.

[47794] LOC283385 (Accession NP_776254.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC283385 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283385, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283385 BINDING SITE, desig-

nated SEQ ID:2089, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47795] Another function of GAM5227 is therefore inhibition of LOC283385 (Accession NP_776254.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283385.

[47796] LOC283460 (Accession XP_208682.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC283460 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283460, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283460 BINDING SITE, designated SEQ ID:5440, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47797] Another function of GAM5227 is therefore inhibition of LOC283460 (Accession XP_208682.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC283460.

[47798] LOC283534 (Accession XP_211083.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC283534 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283534, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283534 BINDING SITE, designated SEQ ID:19940, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47799] Another function of GAM5227 is therefore inhibition of LOC283534 (Accession XP_211083.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283534.

[47800] LOC283551 (Accession XP_211110.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC283551 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283551, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283551 BINDING SITE, designated SEQ ID:10476, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47801] Another function of GAM5227 is therefore inhibition of LOC283551 (Accession XP_211110.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283551.

[47802] LOC283738 (Accession XP_211186.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC283738 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283738, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283738 BINDING SITE, designated SEQ ID:9445, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47803] Another function of GAM5227 is therefore inhibition of LOC283738 (Accession XP_211186.1) . Accordingly, utili-

ties of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283738.

[47804] LOC283806 (Accession XP_208846.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC283806 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283806, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283806 BINDING SITE, designated SEQ ID:17351, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47805] Another function of GAM5227 is therefore inhibition of LOC283806 (Accession XP_208846.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283806.

[47806] LOC283849 (Accession NP_848611.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC283849 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of

mRNA encoded by LOC283849, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283849 BINDING SITE, designated SEQ ID:5876, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47807] Another function of GAM5227 is therefore inhibition of LOC283849 (Accession NP_848611.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283849.

[47808] LOC283924 (Accession XP_208906.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC283924 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283924, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283924 BINDING SITE, designated SEQ ID:6869, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47809] Another function of GAM5227 is therefore inhibition of LOC283924 (Accession XP_208906.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283924.

[47810] LOC283949 (Accession XP_208928.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC283949 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283949, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283949 BINDING SITE, designated SEQ ID:1669, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47811] Another function of GAM5227 is therefore inhibition of LOC283949 (Accession XP_208928.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283949.

[47812] LOC284082 (Accession XP_211323.1) is another GAM5227 target gene, herein designated TARGET GENE.

LOC284082 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284082, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284082 BINDING SITE, designated SEQ ID:15264, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47813] Another function of GAM5227 is therefore inhibition of LOC284082 (Accession XP_211323.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284082.

[47814] LOC284118 (Accession XP_211336.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC284118 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284118, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284118 BINDING SITE, designated SEQ ID:12184, to the nucleotide sequence of

GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47815] Another function of GAM5227 is therefore inhibition of LOC284118 (Accession XP_211336.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284118.

[47816] LOC284178 (Accession XP_211365.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC284178 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284178, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284178 BINDING SITE, designated SEQ ID:8059, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47817] Another function of GAM5227 is therefore inhibition of LOC284178 (Accession XP_211365.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284178.

[47818] LOC284281 (Accession XP_211415.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC284281 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284281, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284281 BINDING SITE, designated SEQ ID:15205, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47819] Another function of GAM5227 is therefore inhibition of LOC284281 (Accession XP_211415.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284281.

[47820] LOC284325 (Accession XP_209143.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC284325 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284325, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC284325 BINDING SITE, designated SEQ ID:6963, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47821] Another function of GAM5227 is therefore inhibition of LOC284325 (Accession XP_209143.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284325.

[47822] LOC284375 (Accession XP_209154.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC284375 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284375, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284375 BINDING SITE, designated SEQ ID:6814, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47823] Another function of GAM5227 is therefore inhibition of LOC284375 (Accession XP_209154.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC284375.

[47824] LOC284402 (Accession XP_211453.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC284402 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284402, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284402 BINDING SITE, designated SEQ ID:13078, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47825] Another function of GAM5227 is therefore inhibition of LOC284402 (Accession XP_211453.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284402.

[47826] LOC284459 (Accession XP_290826.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC284459 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284459, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284459 BINDING SITE, designated SEQ ID:1608, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47827] Another function of GAM5227 is therefore inhibition of LOC284459 (Accession XP_290826.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284459.

[47828] LOC284650 (Accession XP_211571.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC284650 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284650, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284650 BINDING SITE, designated SEQ ID:9610, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47829] Another function of GAM5227 is therefore inhibition of

LOC284650 (Accession XP_211571.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284650.

[47830] LOC285117 (Accession XP_209482.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC285117 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285117, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285117 BINDING SITE, designated SEQ ID:13418, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47831] Another function of GAM5227 is therefore inhibition of LOC285117 (Accession XP_209482.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285117.

[47832] LOC285127 (Accession XP_211771.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC285127 BINDING SITE is a target binding site found in

the 3` untranslated region of mRNA encoded by LOC285127, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285127 BINDING SITE, designated SEQ ID:7199, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47833] Another function of GAM5227 is therefore inhibition of LOC285127 (Accession XP_211771.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285127.

[47834] LOC285194 (Accession XP_211803.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC285194 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285194, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285194 BINDING SITE, designated SEQ ID:16102, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:299.

[47835] Another function of GAM5227 is therefore inhibition of LOC285194 (Accession XP_211803.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285194.

[47836] LOC285284 (Accession XP_211836.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC285284 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285284, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285284 BINDING SITE, designated SEQ ID:567, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47837] Another function of GAM5227 is therefore inhibition of LOC285284 (Accession XP_211836.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285284.

[47838] LOC285587 (Accession XP_211947.1) is another

GAM5227 target gene, herein designated TARGET GENE. LOC285587 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285587, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285587 BINDING SITE, designated SEQ ID:1779, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47839] Another function of GAM5227 is therefore inhibition of LOC285587 (Accession XP_211947.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285587.

[47840] LOC285673 (Accession XP_209720.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC285673 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285673, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285673 BINDING SITE, desig-

nated SEQ ID:4976, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47841] Another function of GAM5227 is therefore inhibition of LOC285673 (Accession XP_209720.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285673.

[47842] LOC285799 (Accession XP_209764.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC285799 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285799, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285799 BINDING SITE, designated SEQ ID:3655, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47843] Another function of GAM5227 is therefore inhibition of LOC285799 (Accession XP_209764.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC285799.

[47844] LOC285806 (Accession XP_212028.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC285806 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285806, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285806 BINDING SITE, designated SEQ ID:17117, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47845] Another function of GAM5227 is therefore inhibition of LOC285806 (Accession XP_212028.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285806.

[47846] LOC285827 (Accession XP_212645.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC285827 BINDING SITE1 and LOC285827 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by LOC285827, corresponding to target binding sites such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285827 BINDING SITE1 and LOC285827 BINDING SITE2, designated SEQ ID:13212 and SEQ ID:13212 respectively, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47847] Another function of GAM5227 is therefore inhibition of LOC285827 (Accession XP_212645.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285827.

[47848] LOC285827 (Accession XP_212604.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC285827 BINDING SITE1 and LOC285827 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by LOC285827, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285827 BINDING SITE1 and LOC285827 BINDING SITE2, designated SEQ ID:4842 and SEQ ID:5526 respectively, to the nucleotide sequence of

GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47849] Another function of GAM5227 is therefore inhibition of LOC285827 (Accession XP_212604.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285827.

[47850] LOC286045 (Accession XP_212151.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC286045 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286045, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286045 BINDING SITE, designated SEQ ID:17966, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47851] Another function of GAM5227 is therefore inhibition of LOC286045 (Accession XP_212151.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286045.

[47852] LOC286208 (Accession XP_212230.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC286208 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286208, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286208 BINDING SITE, designated SEQ ID:8321, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47853] Another function of GAM5227 is therefore inhibition of LOC286208 (Accession XP_212230.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286208.

[47854] LOC286255 (Accession XP_209977.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC286255 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286255, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC286255 BINDING SITE, designated SEQ ID:13323, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47855] Another function of GAM5227 is therefore inhibition of LOC286255 (Accession XP_209977.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286255.

[47856] LOC286354 (Accession XP_212286.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC286354 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286354, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286354 BINDING SITE, designated SEQ ID:1632, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47857] Another function of GAM5227 is therefore inhibition of LOC286354 (Accession XP_212286.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC286354.

[47858] LOC338653 (Accession XP_294673.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC338653 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338653, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338653 BINDING SITE, designated SEQ ID:10990, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47859] Another function of GAM5227 is therefore inhibition of LOC338653 (Accession XP_294673.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338653.

[47860] LOC339679 (Accession XP_295029.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC339679 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339679, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339679 BINDING SITE, designated SEQ ID:2642, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47861] Another function of GAM5227 is therefore inhibition of LOC339679 (Accession XP_295029.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339679.

[47862] LOC339983 (Accession XP_291101.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC339983 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339983, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339983 BINDING SITE, designated SEQ ID:11160, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47863] Another function of GAM5227 is therefore inhibition of

LOC339983 (Accession XP_291101.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339983.

[47864] LOC340504 (Accession XP_295260.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC340504 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC340504, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340504 BINDING SITE, designated SEQ ID:1223, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47865] Another function of GAM5227 is therefore inhibition of LOC340504 (Accession XP_295260.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340504.

[47866] LOC348399 (Accession XP_302744.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC348399 BINDING SITE is a target binding site found in

the 3` untranslated region of mRNA encoded by LOC348399, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348399 BINDING SITE, designated SEQ ID:12324, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47867] Another function of GAM5227 is therefore inhibition of LOC348399 (Accession XP_302744.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348399.

[47868] LOC348428 (Accession XP_302753.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC348428 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348428, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348428 BINDING SITE, designated SEQ ID:6112, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:299.

[47869] Another function of GAM5227 is therefore inhibition of LOC348428 (Accession XP_302753.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348428.

[47870] LOC348477 (Accession XP_046126.4) is another GAM5227 target gene, herein designated TARGET GENE. LOC348477 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348477, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348477 BINDING SITE, designated SEQ ID:9788, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47871] Another function of GAM5227 is therefore inhibition of LOC348477 (Accession XP_046126.4) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348477.

[47872] LOC348928 (Accession XP_209688.1) is another

GAM5227 target gene, herein designated TARGET GENE. LOC348928 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348928, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348928 BINDING SITE, designated SEQ ID:8901, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47873] Another function of GAM5227 is therefore inhibition of LOC348928 (Accession XP_209688.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348928.

[47874] LOC349289 (Accession XP_300477.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC349289 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC349289, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349289 BINDING SITE, desig-

nated SEQ ID:8287, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47875] Another function of GAM5227 is therefore inhibition of LOC349289 (Accession XP_300477.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349289.

[47876] LOC352027 (Accession XP_302245.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC352027 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC352027, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC352027 BINDING SITE, designated SEQ ID:13440, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47877] Another function of GAM5227 is therefore inhibition of LOC352027 (Accession XP_302245.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC352027.

[47878] LOC56920 (Accession NP_064548.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC56920 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC56920, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC56920 BINDING SITE, designated SEQ ID:14103, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47879] Another function of GAM5227 is therefore inhibition of LOC56920 (Accession NP_064548.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC56920.

[47880] LOC90408 (Accession XP_031517.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC90408 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC90408, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

LOC90408 BINDING SITE, designated SEQ ID:6783, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47881] Another function of GAM5227 is therefore inhibition of LOC90408 (Accession XP_031517.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90408.

[47882] LOC90529 (Accession NP_835223.1) is another GAM5227 target gene, herein designated TARGET GENE. LOC90529 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC90529, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90529 BINDING SITE, designated SEQ ID:13508, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47883] Another function of GAM5227 is therefore inhibition of LOC90529 (Accession NP_835223.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90529.

[47884] Lymphotoxin alpha (tnf superfamily, member 1) (LTA, Accession NP_000586.2) is another GAM5227 target gene, herein designated TARGET GENE. LTA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LTA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LTA BINDING SITE, designated SEQ ID:16521, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47885] Another function of GAM5227 is therefore inhibition of Lymphotoxin alpha (tnf superfamily, member 1) (LTA, Accession NP_000586.2), a gene which is a cytokine that in its homotrimeric form binds to tnfrsf1a/tnfr1, tnfrsf1b/tnfbr and tnfrsf14/hvem. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LTA.

[47886] The function of LTA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.1.Leukotriene b4 receptor (LTB4R, Accession NP_000743.1) is another GAM5227 target gene, herein

designated TARGET GENE. LTB4R BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LTB4R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LTB4R BINDING SITE, designated SEQ ID:19312, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47887] Another function of GAM5227 is therefore inhibition of Leukotriene b4 receptor (LTB4R, Accession NP_000743.1), a gene which may be the cardiac p2y receptor involved in the regulation of cardiac muscle contraction through modulation of l- type calcium currents. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LTB4R.

[47888] The function of LTB4R and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Mitogen-activated protein kinase kinase kinase kinase 2 (MAP4K2, Accession NP_004570.2) is another GAM5227 target gene, herein designated TARGET

GENE. MAP4K2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MAP4K2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAP4K2 BINDING SITE, designated SEQ ID:12350, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47889] Another function of GAM5227 is therefore inhibition of Mitogen-activated protein kinase kinase kinase kinase 2 (MAP4K2, Accession NP_004570.2), a gene which serine/threonine protein kinase required for spore wall development. activates Jun N- terminal kinase; member of the STE20 kinase family. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAP4K2.

[47890] The function of MAP4K2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1849.1.MCFP (Accession NP_061331.1) is another GAM5227 target gene, herein designated TARGET GENE. MCFP BINDING SITE is a target binding site found in the 5`

untranslated region of mRNA encoded by MCFP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MCFP BINDING SITE, designated SEQ ID:906, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47891] Another function of GAM5227 is therefore inhibition of MCFP (Accession NP_061331.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MCFP.

[47892] MDS018 (Accession NP_068595.2) is another GAM5227 target gene, herein designated TARGET GENE. MDS018 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MDS018, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MDS018 BINDING SITE, designated SEQ ID:3171, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47893] Another function of GAM5227 is therefore inhibition of MDS018 (Accession NP_068595.2) . Accordingly, utilities

of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MDS018.

[47894] MGC14161 (Accession NP_116281.1) is another GAM5227 target gene, herein designated TARGET GENE. MGC14161 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC14161, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC14161 BINDING SITE, designated SEQ ID:11439, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47895] Another function of GAM5227 is therefore inhibition of MGC14161 (Accession NP_116281.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC14161.

[47896] MGC15730 (Accession NP_116269.2) is another GAM5227 target gene, herein designated TARGET GENE. MGC15730 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC15730, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC15730 BINDING SITE, designated SEQ ID:10025, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47897] Another function of GAM5227 is therefore inhibition of MGC15730 (Accession NP_116269.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC15730.

[47898] MGC17515 (Accession NP_689684.1) is another GAM5227 target gene, herein designated TARGET GENE. MGC17515 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC17515, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC17515 BINDING SITE, designated SEQ ID:4222, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47899] Another function of GAM5227 is therefore inhibition of MGC17515 (Accession NP_689684.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with MGC17515.

[47900] MGC3020 (Accession NP_076953.2) is another GAM5227 target gene, herein designated TARGET GENE. MGC3020 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC3020, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC3020 BINDING SITE, designated SEQ ID:3360, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47901] Another function of GAM5227 is therefore inhibition of MGC3020 (Accession NP_076953.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC3020.

[47902] MGC3113 (Accession NP_076940.1) is another GAM5227 target gene, herein designated TARGET GENE. MGC3113 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC3113, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of MGC3113 BINDING SITE, designated SEQ ID:1375, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47903] Another function of GAM5227 is therefore inhibition of MGC3113 (Accession NP_076940.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC3113.

[47904] MGC39633 (Accession NP_689762.1) is another GAM5227 target gene, herein designated TARGET GENE. MGC39633 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC39633, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC39633 BINDING SITE, designated SEQ ID:1566, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47905] Another function of GAM5227 is therefore inhibition of MGC39633 (Accession NP_689762.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

MGC39633.

[47906] MI-ER1 (Accession NP_065999.1) is another GAM5227 target gene, herein designated TARGET GENE. MI-ER1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MI-ER1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MI-ER1 BINDING SITE, designated SEQ ID:2832, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47907] Another function of GAM5227 is therefore inhibition of MI-ER1 (Accession NP_065999.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MI-ER1.

[47908] Myeloid/lymphoid or mixed-lineage leukemia (trithorax homolog, drosophila); translocated to, 3 (MLLT3, Accession NP_004520.1) is another GAM5227 target gene, herein designated TARGET GENE. MLLT3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MLLT3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementar-

ity of the nucleotide sequences of MLLT3 BINDING SITE, designated SEQ ID:16801, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47909] Another function of GAM5227 is therefore inhibition of Myeloid/lymphoid or mixed-lineage leukemia (trithorax homolog, drosophila); translocated to, 3 (MLLT3, Accession NP_004520.1), a gene which is Serine and proline rich protein and therefore is associated with Acute leukemias. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of Acute leukemias, and of other diseases and clinical conditions associated with MLLT3.

[47910] The function of MLLT3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM233.1.Myeloproliferative leukemia virus oncogene (MPL, Accession NP_005364.1) is another GAM5227 target gene, herein designated TARGET GENE. MPL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MPL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of MPL BINDING SITE, designated SEQ ID:8412, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47911] Another function of GAM5227 is therefore inhibition of Myeloproliferative leukemia virus oncogene (MPL, Accession NP_005364.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MPL.

[47912] MPRG (Accession NP_060175.2) is another GAM5227 target gene, herein designated TARGET GENE. MPRG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MPRG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MPRG BINDING SITE, designated SEQ ID:19256, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47913] Another function of GAM5227 is therefore inhibition of MPRG (Accession NP_060175.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MPRG.

[47914] Max interacting protein 1 (MXI1, Accession NP_005953.2) is another GAM5227 target gene, herein designated TARGET GENE. MXI1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MXI1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MXI1 BINDING SITE, designated SEQ ID:10235, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47915] Another function of GAM5227 is therefore inhibition of Max interacting protein 1 (MXI1, Accession NP_005953.2), a gene which acts as a tumor suppressor in vivo, engages the MYC network in a functionally relevant manner and therefore may be associated with Prostate cancer, neurofibrosarcoma. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of Prostate cancer, neurofibrosarcoma, and of other diseases and clinical conditions associated with MXI1.

[47916] The function of MXI1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM94.1.Max interacting protein 1 (MXI1, Accession NP_569157.1) is another GAM5227 target gene, herein designated TARGET GENE. MXI1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MXI1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MXI1 BINDING SITE, designated SEQ ID:10235, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47917] Another function of GAM5227 is therefore inhibition of Max interacting protein 1 (MXI1, Accession NP_569157.1), a gene which acts as a tumor suppressor in vivo, engages the MYC network in a functionally relevant manner and therefore may be associated with Prostate cancer, neurofibrosarcoma. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of Prostate cancer, neurofibrosarcoma, and of other diseases and clinical conditions associated with MXI1.

[47918] The function of MXI1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM94.1.Myosin light chain kinase 2, skeletal muscle (MYLK2, Accession NP_149109.1) is another GAM5227 target gene, herein designated TARGET GENE. MYLK2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MYLK2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MYLK2 BINDING SITE, designated SEQ ID:8353, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47919] Another function of GAM5227 is therefore inhibition of Myosin light chain kinase 2, skeletal muscle (MYLK2, Accession NP_149109.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MYLK2.

[47920] Nuclear receptor co-repressor 2 (NCOR2, Accession NP_006303.1) is another GAM5227 target gene, herein designated TARGET GENE. NCOR2 BINDING SITE1 and NCOR2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by NCOR2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of NCOR2 BINDING SITE1 and NCOR2 BINDING SITE2, designated SEQ ID:19433 and SEQ ID:18576 respectively, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47921] Another function of GAM5227 is therefore inhibition of Nuclear receptor co-repressor 2 (NCOR2, Accession NP_006303.1), a gene which mediates the transcriptional repression activity of some nuclear receptors by promoting chromatin condensation, thus preventing access of the basal transcription. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NCOR2.

[47922] The function of NCOR2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1065.1.NDEL1 (Accession NP_110435.1) is another GAM5227 target gene, herein designated TARGET GENE. NDEL1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NDEL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of NDEL1 BINDING SITE, designated SEQ ID:4770, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47923] Another function of GAM5227 is therefore inhibition of NDEL1 (Accession NP_110435.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NDEL1.

[47924] Neuroglobin (NGB, Accession NP_067080.1) is another GAM5227 target gene, herein designated TARGET GENE. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NGB BINDING SITE, designated SEQ ID:16217, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47925] Another function of GAM5227 is therefore inhibition of Neuroglobin (NGB, Accession NP_067080.1), a gene which has function in oxygen transport and storage in humans. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NGB.

[47926] The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM404.2.Non-metastatic cells 2, protein (nm23b) expressed in (NME2, Accession NP_002503.1) is another GAM5227 target gene, herein designated TARGET GENE. NME2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NME2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NME2 BINDING SITE, designated SEQ ID:1264, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47927] Another function of GAM5227 is therefore inhibition of Non-metastatic cells 2, protein (nm23b) expressed in (NME2, Accession NP_002503.1), a gene which has a major role in the synthesis of nucleoside triphosphates other than atp and acts as a transcriptional activator of the c-myc gene. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NME2.

[47928] The function of NME2 and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM762.1.Nsfl1 (p97) cofactor (p47) (NSFL1C, Accession NP_061327.2) is another GAM5227 target gene, herein designated TARGET GENE. NSFL1C BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by NSFL1C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NSFL1C BINDING SITE, designated SEQ ID:15237, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47929] Another function of GAM5227 is therefore inhibition of Nsfl1 (p97) cofactor (p47) (NSFL1C, Accession NP_061327.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NSFL1C.

[47930] Purinergic receptor p2x, ligand-gated ion channel, 1 (P2RX1, Accession NP_002549.1) is another GAM5227 target gene, herein designated TARGET GENE. P2RX1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by P2RX1, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of P2RX1 BINDING SITE, designated SEQ ID:8598, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47931] Another function of GAM5227 is therefore inhibition of Purinergic receptor p2x, ligand-gated ion channel, 1 (P2RX1, Accession NP_002549.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with P2RX1.

[47932] P53AIP1 (Accession NP_071395.1) is another GAM5227 target gene, herein designated TARGET GENE. P53AIP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by P53AIP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of P53AIP1 BINDING SITE, designated SEQ ID:17485, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47933] Another function of GAM5227 is therefore inhibition of P53AIP1 (Accession NP_071395.1) . Accordingly, utilities

of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with P53AIP1.

[47934] Protocadherin beta 12 (PCDHB12, Accession NP_061755.1) is another GAM5227 target gene, herein designated TARGET GENE. PCDHB12 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PCDHB12, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHB12 BINDING SITE, designated SEQ ID:7917, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47935] Another function of GAM5227 is therefore inhibition of Protocadherin beta 12 (PCDHB12, Accession NP_061755.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHB12.

[47936] PCMF (Accession NP_064507.2) is another GAM5227 target gene, herein designated TARGET GENE. PCMF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PCMF, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCMF BINDING SITE, designated SEQ ID:11762, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47937] Another function of GAM5227 is therefore inhibition of PCMF (Accession NP_064507.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCMF.

[47938] Proprotein convertase subtilisin/kexin type 7 (PCSK7, Accession NP_004707.2) is another GAM5227 target gene, herein designated TARGET GENE. PCSK7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PCSK7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCSK7 BINDING SITE, designated SEQ ID:11321, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47939] Another function of GAM5227 is therefore inhibition of Proprotein convertase subtilisin/kexin type 7 (PCSK7, Ac-

cession NP_004707.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCSK7.

[47940] Pyruvate dehydrogenase kinase, isoenzyme 4 (PDK4, Accession NP_002603.1) is another GAM5227 target gene, herein designated TARGET GENE. PDK4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PDK4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PDK4 BINDING SITE, designated SEQ ID:2181, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47941] Another function of GAM5227 is therefore inhibition of Pyruvate dehydrogenase kinase, isoenzyme 4 (PDK4, Accession NP_002603.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDK4.

[47942] Paternally expressed 10 (PEG10, Accession NP_055883.1) is another GAM5227 target gene, herein designated TARGET GENE. PEG10 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

PEG10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PEG10 BINDING SITE, designated SEQ ID:10949, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47943] Another function of GAM5227 is therefore inhibition of Paternally expressed 10 (PEG10, Accession NP_055883.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PEG10.

[47944] 6-phosphofructo-2-kinase/fructose-2,6-biphosphatase 3 (PFKFB3, Accession NP_004557.1) is another GAM5227 target gene, herein designated TARGET GENE. PFKFB3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PFKFB3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PFKFB3 BINDING SITE, designated SEQ ID:2796, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47945] Another function of GAM5227 is therefore inhibition of 6-phosphofructo-2-kinase/fructose-2,6-biphosphatase 3 (PFKFB3, Accession NP_004557.1), a gene which catalizes synthesis and degradation of fructose 2,6- bisphosphate. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PFKFB3.

[47946] The function of PFKFB3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.PI4KII (Accession NP_060895.1) is another GAM5227 target gene, herein designated TARGET GENE. PI4KII BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PI4KII, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PI4KII BINDING SITE, designated SEQ ID:11397, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47947] Another function of GAM5227 is therefore inhibition of PI4KII (Accession NP_060895.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with PI4KII.

[47948] Plexin a2 (PLXNA2, Accession NP_079455.1) is another GAM5227 target gene, herein designated TARGET GENE. PLXNA2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLXNA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PLXNA2 BINDING SITE, designated SEQ ID:6296, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47949] Another function of GAM5227 is therefore inhibition of Plexin a2 (PLXNA2, Accession NP_079455.1), a gene which is a transmembrane protein. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PLXNA2.

[47950] The function of PLXNA2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM65.1.Podocalyxin-like (PODXL, Accession NP_005388.1) is another GAM5227 target gene, herein designated TARGET GENE. PODXL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA

encoded by PODXL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PODXL BINDING SITE, designated SEQ ID:15111, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47951] Another function of GAM5227 is therefore inhibition of Podocalyxin-like (PODXL, Accession NP_005388.1), a gene which is an antiadhesin. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PODXL.

[47952] The function of PODXL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.1.Polymerase (dna directed), epsilon 3 (p17 subunit) (POLE3, Accession NP_059139.2) is another GAM5227 target gene, herein designated TARGET GENE. POLE3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by POLE3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of POLE3 BINDING SITE, designated SEQ ID:18239, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47953] Another function of GAM5227 is therefore inhibition of Polymerase (dna directed), epsilon 3 (p17 subunit) (POLE3, Accession NP_059139.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with POLE3.

[47954] Pou domain, class 2, transcription factor 2 (POU2F2, Accession NP_002689.1) is another GAM5227 target gene, herein designated TARGET GENE. POU2F2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by POU2F2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of POU2F2 BINDING SITE, designated SEQ ID:13248, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47955] Another function of GAM5227 is therefore inhibition of Pou domain, class 2, transcription factor 2 (POU2F2, Accession NP_002689.1), a gene which activates immunoglobulin gene expression. Accordingly, utilities of

GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with POU2F2.

[47956] The function of POU2F2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM148.2.Protein kinase, interferon-inducible double stranded rna dependent (PRKR, Accession NP_002750.1) is another GAM5227 target gene, herein designated TARGET GENE. PRKR BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PRKR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRKR BINDING SITE, designated SEQ ID:1023, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47957] Another function of GAM5227 is therefore inhibition of Protein kinase, interferon-inducible double stranded rna dependent (PRKR, Accession NP_002750.1), a gene which catalyze the phosphorylation of the alpha subunit of eif2. and therefore may be associated with Huntington's disease. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of Huntington's disease, and of

other diseases and clinical conditions associated with PRKR.

[47958] The function of PRKR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.PRO2435 (Accession NP_060997.1) is another GAM5227 target gene, herein designated TARGET GENE. PRO2435 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PRO2435, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO2435 BINDING SITE, designated SEQ ID:18921, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47959] Another function of GAM5227 is therefore inhibition of PRO2435 (Accession NP_060997.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO2435.

[47960] PROM2 (Accession NP_653308.1) is another GAM5227 target gene, herein designated TARGET GENE. PROM2

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PROM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PROM2 BINDING SITE, designated SEQ ID:11956, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47961] Another function of GAM5227 is therefore inhibition of PROM2 (Accession NP_653308.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PROM2.

[47962] Pregnancy specific beta-1-glycoprotein 7 (PSG7, Accession NP_002774.1) is another GAM5227 target gene, herein designated TARGET GENE. PSG7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PSG7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PSG7 BINDING SITE, designated SEQ ID:3072, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47963] Another function of GAM5227 is therefore inhibition of Pregnancy specific beta-1-glycoprotein 7 (PSG7, Accession NP_002774.1), a gene which function still unknown. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PSG7.

[47964] The function of PSG7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.Quiescin q6 (QSCN6, Accession NP_002817.2) is another GAM5227 target gene, herein designated TARGET GENE. QSCN6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by QSCN6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of QSCN6 BINDING SITE, designated SEQ ID:11516, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47965] Another function of GAM5227 is therefore inhibition of Quiescin q6 (QSCN6, Accession NP_002817.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention

and treatment of diseases and clinical conditions associated with QSCN6.

[47966] Rab17, member ras oncogene family (RAB17, Accession NP_071894.1) is another GAM5227 target gene, herein designated TARGET GENE. RAB17 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAB17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAB17 BINDING SITE, designated SEQ ID:18385, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47967] Another function of GAM5227 is therefore inhibition of Rab17, member ras oncogene family (RAB17, Accession NP_071894.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB17.

[47968] Receptor (calcitonin) activity modifying protein 3 (RAMP3, Accession NP_005847.1) is another GAM5227 target gene, herein designated TARGET GENE. RAMP3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAMP3, corresponding to a target

binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAMP3 BINDING SITE, designated SEQ ID:7834, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47969] Another function of GAM5227 is therefore inhibition of Receptor (calcitonin) activity modifying protein 3 (RAMP3, Accession NP_005847.1), a gene which is required to transport calcitonin- receptor- like receptor (crlr) to the plasma membrane. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAMP3.

[47970] The function of RAMP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM625.1.Reelin (RELN, Accession NP_774959.1) is another GAM5227 target gene, herein designated TARGET GENE. RELN BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RELN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementar-

ity of the nucleotide sequences of RELN BINDING SITE, designated SEQ ID:16254, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47971] Another function of GAM5227 is therefore inhibition of Reelin (RELN, Accession NP_774959.1), a gene which regulates microtubule function in neurons and neuronal migration. and therefore is associated with Norman- roberts syndrome. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of Norman- roberts syndrome, and of other diseases and clinical conditions associated with RELN.

[47972] The function of RELN and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM700.2.Reelin (RELN, Accession NP_005036.2) is another GAM5227 target gene, herein designated TARGET GENE. RELN BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RELN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RELN BINDING SITE,

designated SEQ ID:16254, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47973] Another function of GAM5227 is therefore inhibition of Reelin (RELN, Accession NP_005036.2), a gene which regulates microtubule function in neurons and neuronal migration. and therefore is associated with Norman- roberts syndrome. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of Norman- roberts syndrome, and of other diseases and clinical conditions associated with RELN.

[47974] The function of RELN and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM700.2.RETNLB (Accession NP_115968.1) is another GAM5227 target gene, herein designated TARGET GENE. RETNLB BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by RETNLB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RETNLB BINDING SITE, designated SEQ ID:1728, to the nucleotide sequence of GAM5227 RNA, herein designated

GAM RNA, also designated SEQ ID:299.

[47975] Another function of GAM5227 is therefore inhibition of RETNLB (Accession NP_115968.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RETNLB.

[47976] Regulator of g-protein signalling 7 (RGS7, Accession NP_002915.2) is another GAM5227 target gene, herein designated TARGET GENE. RGS7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RGS7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RGS7 BINDING SITE, designated SEQ ID:20171, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47977] Another function of GAM5227 is therefore inhibition of Regulator of g-protein signalling 7 (RGS7, Accession NP_002915.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RGS7.

[47978] Ring finger protein 24 (RNF24, Accession NP_009150.1) is another GAM5227 target gene, herein designated TARGET

GENE. RNF24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RNF24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RNF24 BINDING SITE, designated SEQ ID:16047, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47979] Another function of GAM5227 is therefore inhibition of Ring finger protein 24 (RNF24, Accession NP_009150.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNF24.

[47980] Sodium channel, voltage-gated, type iv, alpha polypeptide (SCN4A, Accession NP_000325.1) is another GAM5227 target gene, herein designated TARGET GENE. SCN4A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SCN4A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SCN4A BINDING SITE, designated SEQ ID:3212, to the nucleotide sequence of GAM5227 RNA, herein designated

GAM RNA, also designated SEQ ID:299.

[47981] Another function of GAM5227 is therefore inhibition of Sodium channel, voltage-gated, type iv, alpha polypeptide (SCN4A, Accession NP_000325.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCN4A.

[47982] SETDB2 (Accession NP_114121.1) is another GAM5227 target gene, herein designated TARGET GENE. SETDB2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SETDB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SETDB2 BINDING SITE, designated SEQ ID:9368, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47983] Another function of GAM5227 is therefore inhibition of SETDB2 (Accession NP_114121.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SETDB2.

[47984] Solute carrier family 13 (sodium-dependent dicarboxylate transporter), member 3 (SLC13A3, Accession NP_073740.2) is another GAM5227 target gene, herein

designated TARGET GENE. SLC13A3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC13A3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC13A3 BINDING SITE, designated SEQ ID:18351, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47985] Another function of GAM5227 is therefore inhibition of Solute carrier family 13 (sodium-dependent dicarboxylate transporter), member 3 (SLC13A3, Accession NP_073740.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC13A3.

[47986] Solute carrier family 17 (sodium-dependent inorganic phosphate cotransporter), member 7 (SLC17A7, Accession NP_064705.1) is another GAM5227 target gene, herein designated TARGET GENE. SLC17A7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC17A7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of SLC17A7 BINDING SITE, designated SEQ ID:4723, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47987] Another function of GAM5227 is therefore inhibition of Solute carrier family 17 (sodium-dependent inorganic phosphate cotransporter), member 7 (SLC17A7, Accession NP_064705.1), a gene which is a brain- specific Na- dependent inorganic phosphate cotransporter. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC17A7.

[47988] The function of SLC17A7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM500.2.SLC9A8 (Accession XP_030524.2) is another GAM5227 target gene, herein designated TARGET GENE. SLC9A8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC9A8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC9A8 BINDING SITE, designated SEQ ID:13104, to the

nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47989] Another function of GAM5227 is therefore inhibition of SLC9A8 (Accession XP_030524.2) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC9A8.

[47990] Synovial sarcoma translocation, chromosome 18 (SS18, Accession NP_005628.1) is another GAM5227 target gene, herein designated TARGET GENE. SS18 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SS18, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SS18 BINDING SITE, designated SEQ ID:5489, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47991] Another function of GAM5227 is therefore inhibition of Synovial sarcoma translocation, chromosome 18 (SS18, Accession NP_005628.1), a gene which is a putative transcriptional activator. and therefore is associated with Human synovial sarcomas. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of Human

synovial sarcomas., and of other diseases and clinical conditions associated with SS18.

[47992] The function of SS18 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.T-cell leukemia/lymphoma 6 (TCL6, Accession NP_055233.1) is another GAM5227 target gene, herein designated TARGET GENE. TCL6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TCL6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TCL6 BINDING SITE, designated SEQ ID:13727, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47993] Another function of GAM5227 is therefore inhibition of T-cell leukemia/lymphoma 6 (TCL6, Accession NP_055233.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TCL6.

[47994] T-cell leukemia/lymphoma 6 (TCL6, Accession NP_065575.1) is another GAM5227 target gene, herein

designated TARGET GENE. TCL6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TCL6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TCL6 BINDING SITE, designated SEQ ID:13727, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47995] Another function of GAM5227 is therefore inhibition of T-cell leukemia/lymphoma 6 (TCL6, Accession NP_065575.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TCL6.

[47996] Thioesterase, adipose associated (THEA, Accession NP_671517.1) is another GAM5227 target gene, herein designated TARGET GENE. THEA BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by THEA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of THEA BINDING SITE, designated SEQ ID:7538, to the nucleotide

sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47997] Another function of GAM5227 is therefore inhibition of Thioesterase, adipose associated (THEA, Accession NP_671517.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with THEA.

[47998] Transducin-like enhancer of split 2 (e(sp1) homolog, drosophila) (TLE2, Accession NP_003251.2) is another GAM5227 target gene, herein designated TARGET GENE. TLE2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TLE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TLE2 BINDING SITE, designated SEQ ID:642, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[47999] Another function of GAM5227 is therefore inhibition of Transducin-like enhancer of split 2 (e(sp1) homolog, drosophila) (TLE2, Accession NP_003251.2), a gene which involves in epithelial differentiation. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with TLE2.

[48000] The function of TLE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM223.1.Transmembrane protease, serine 3 (TMPRSS3, Accession NP_076927.1) is another GAM5227 target gene, herein designated TARGET GENE. TMPRSS3 BINDING SITE1 and TMPRSS3 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TMPRSS3, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TMPRSS3 BINDING SITE1 and TMPRSS3 BINDING SITE2, designated SEQ ID:19374 and SEQ ID:17983 respectively, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[48001] Another function of GAM5227 is therefore inhibition of Transmembrane protease, serine 3 (TMPRSS3, Accession NP_076927.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TMPRSS3.

[48002] Transmembrane protease, serine 3 (TMPRSS3, Accession

NP_076927.1) is another GAM5227 target gene, herein designated TARGET GENE. TMPRSS3 BINDING SITE1 and TMPRSS3 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TMPRSS3, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TMPRSS3 BINDING SITE1 and TMPRSS3 BINDING SITE2, designated SEQ ID:17983 and SEQ ID:17983 respectively, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[48003] Another function of GAM5227 is therefore inhibition of Transmembrane protease, serine 3 (TMPRSS3, Accession NP_076927.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TMPRSS3.

[48004] Transmembrane protease, serine 3 (TMPRSS3, Accession NP_115777.1) is another GAM5227 target gene, herein designated TARGET GENE. TMPRSS3 BINDING SITE1 and TMPRSS3 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TMPRSS3, corresponding to target binding sites

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TMPRSS3 BINDING SITE1 and TMPRSS3 BINDING SITE2, designated SEQ ID:19374 and SEQ ID:19374 respectively, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[48005] Another function of GAM5227 is therefore inhibition of Transmembrane protease, serine 3 (TMPRSS3, Accession NP_115777.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TMPRSS3.

[48006] Troponin c, slow (TNNC1, Accession NP_003271.1) is another GAM5227 target gene, herein designated TARGET GENE. TNNC1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNNC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNNC1 BINDING SITE, designated SEQ ID:12996, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[48007] Another function of GAM5227 is therefore inhibition of Troponin c, slow (TNNC1, Accession NP_003271.1), a gene which Troponin C; calcium- binding subunit of troponin, a regulatory protein, prevents actin and myosin interaction in resting muscle tissue. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TNNC1.

[48008] The function of TNNC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM3099.2.Trichorhinophalangeal syndrome i (TRPS1, Accession NP_054831.1) is another GAM5227 target gene, herein designated TARGET GENE. TRPS1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRPS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRPS1 BINDING SITE, designated SEQ ID:5417, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[48009] Another function of GAM5227 is therefore inhibition of Trichorhinophalangeal syndrome i (TRPS1, Accession

NP_054831.1), a gene which may function as a transcriptional activator protein and therefore is associated with Trichorhinophalangeal syndrome type i, type iii. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of Trichorhinophalangeal syndrome type i, type iii, and of other diseases and clinical conditions associated with TRPS1.

[48010] The function of TRPS1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM139.1.Tissue specific transplantation antigen p35b (TSTA3, Accession NP_003304.1) is another GAM5227 target gene, herein designated TARGET GENE. TSTA3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TSTA3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TSTA3 BINDING SITE, designated SEQ ID:19224, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[48011] Another function of GAM5227 is therefore inhibition of Tissue specific transplantation antigen p35b (TSTA3, Ac-

cession NP_003304.1), a gene which converts gdp- 4- dehydro- 6- deoxy- d- mannose to gdp- fucose. and therefore may be associated with Leukocyte adhesion deficiency, type ii. Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of Leukocyte adhesion deficiency, type ii, and of other diseases and clinical conditions associated with TSTA3.

[48012] The function of TSTA3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2012.2.VCIP135 (Accession NP_079330.1) is another GAM5227 target gene, herein designated TARGET GENE. VCIP135 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by VCIP135, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VCIP135 BINDING SITE, designated SEQ ID:16563, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[48013] Another function of GAM5227 is therefore inhibition of VCIP135 (Accession NP_079330.1) . Accordingly, utilities

of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VCIP135.

[48014] Zinc finger, dhhc domain containing 2 (ZDHHC2, Accession NP_057437.1) is another GAM5227 target gene, herein designated TARGET GENE. ZDHHC2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZDHHC2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZDHHC2 BINDING SITE, designated SEQ ID:8860, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[48015] Another function of GAM5227 is therefore inhibition of Zinc finger, dhhc domain containing 2 (ZDHHC2, Accession NP_057437.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZDHHC2.

[48016] Zinc finger protein 297b (ZNF297B, Accession NP_054726.1) is another GAM5227 target gene, herein designated TARGET GENE. ZNF297B BINDING SITE is a target binding site found in the 3` untranslated region of

mRNA encoded by ZNF297B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF297B BINDING SITE, designated SEQ ID:14345, to the nucleotide sequence of GAM5227 RNA, herein designated GAM RNA, also designated SEQ ID:299.

[48017] Another function of GAM5227 is therefore inhibition of Zinc finger protein 297b (ZNF297B, Accession NP_054726.1) . Accordingly, utilities of GAM5227 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF297B.

[48018]

[48019] Fig. 8 further provides a conceptual description of a novel bioinformatically detected of the present invention, referred to here as Genomic Address Messenger 5346 (GAM5346), which modulates expression of respective target genes thereof, the function and utility of which target genes is known in the art.

[48020] GAM5346 is a novel bioinformatically detected regulatory, non protein coding, micro RNA (miRNA) gene. The method by which GAM5346 was detected is described hereinabove with reference to Figs. 8-15.

[48021] GAM5346 gene, herein designated GAM GENE, and GAM5346 target gene, herein designated TARGET GENE, are human genes contained in the human genome.

[48022] GAM5346 gene encodes a GAM5346 precursor RNA, herein designated GAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, GAM5346 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of GAM5346 precursor RNA is designated SEQ ID:152, and is provided hereinbelow with reference to the sequence listing part.

[48023] GAM5346 precursor RNA folds onto itself, forming GAM5346 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[48024] GAM5346 precursor RNA folds onto itself, forming GAM5346 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional

`hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[48025] Nucleotide sequence of GAM5346 precursor RNA, designated SEQ-ID: 152, and a schematic representation of a predicted secondary folding of GAM5346 folded precursor RNA are further described with reference to Table 2, hereby incorporated by reference.

[48026] An enzyme complex designated DICER COMPLEX, `dices` the GAM5346 folded precursor RNA into GAM5346 RNA, herein designated GAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy Group: B) nucleotide sequence of GAM5346 RNA is designated SEQ ID:319, and is provided hereinbelow with references to the sequence listing part and Table 3, hereby incorporated by reference.

[48027] GAM5346 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM5346 target RNA, herein designated GAM TARGET RNA. GAM5346 target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[48028] GAM5346 RNA, herein designated GAM RNA, binds complementarily to one or more target binding sites located in untranslated regions of GAM5346 target RNA, herein designated GAM TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of GAM5346 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the target binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limiting GAM5346 RNA may have a different number of target binding sites in untranslated regions of a GAM5346 target RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3`UTR region, this is meant as an

example only these target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[48029] The complementary binding of GAM5346 RNA, herein designated GAM RNA, to target binding sites on GAM5346 target RNA, herein designated GAM TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM5346 target RNA into GAM5346 target protein, herein designated GAM TARGET PROTEIN. GAM target protein is therefore outlined by a broken line.

[48030] It is appreciated that GAM5346 target gene, herein designated TARGET GENE, in fact represents a plurality of GAM5346 target genes. The mRNA of each one of this plurality of GAM5346 target genes comprises one or more target binding sites, each having a nucleotide sequence which is at least partly complementary to GAM5346 RNA, herein designated GAM RNA, and which when bound by GAM5346 RNA causes inhibition of translation of respective one or more GAM5346 target proteins.

[48031] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 8 with specific reference to translational inhibition exerted by GAM5346 gene, herein designated GAM GENE, on one or

more GAM5346 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., Perspective: Glimpses of a tiny RNA world, Science 294,779 (2001)).

[48032] It is appreciated that specific functions and accordingly utilities of GAM5346 correlate with, and may be deduced from, the identity of the target genes which GAM5346 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[48033]

[48034]

[48035] A kinase (prka) anchor protein 11 (AKAP11, Accession NP_652761.1) is a GAM5346 target gene, herein designated TARGET GENE. AKAP11 BINDING SITE is a target

binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by AKAP11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AKAP11 BINDING SITE, designated SEQ ID:11814, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48036] A function of GAM5346 is therefore inhibition of A kinase (prka) anchor protein 11 (AKAP11, Accession NP_652761.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AKAP11.

[48037] Aquaporin 10 (AQP10, Accession NP_536354.2) is another GAM5346 target gene, herein designated TARGET GENE. AQP10 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by AQP10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AQP10 BINDING SITE, designated SEQ ID:3157, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48038] Another function of GAM5346 is therefore inhibition of Aquaporin 10 (AQP10, Accession NP_536354.2) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AQP10.

[48039] Adp-ribosylation factor-like 6 interacting protein (ARL6IP, Accession NP_055976.1) is another GAM5346 target gene, herein designated TARGET GENE. ARL6IP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARL6IP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARL6IP BINDING SITE, designated SEQ ID:422, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48040] Another function of GAM5346 is therefore inhibition of Adp-ribosylation factor-like 6 interacting protein (ARL6IP, Accession NP_055976.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARL6IP.

[48041] Aryl-hydrocarbon receptor nuclear translocator 2 (ARNT2, Accession NP_055677.1) is another GAM5346 target gene,

herein designated TARGET GENE. ARNT2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARNT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARNT2 BINDING SITE, designated SEQ ID:12943, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48042] Another function of GAM5346 is therefore inhibition of Aryl-hydrocarbon receptor nuclear translocator 2 (ARNT2, Accession NP_055677.1), a gene which specifically recognizes the xenobiotic response element (xre). Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARNT2.

[48043] The function of ARNT2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM67.1.Alpha thalassemia/mental retardation syndrome x-linked (rad54 homolog, s. cerevisiae) (ATRX, Accession NP_612115.1) is another GAM5346 target gene, herein designated TARGET GENE. ATRX BINDING SITE is a

target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by ATRX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATRX BINDING SITE, designated SEQ ID:13943, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48044] Another function of GAM5346 is therefore inhibition of Alpha thalassemia/mental retardation syndrome x-linked (rad54 homolog, s. cerevisiae) (ATRX, Accession NP_612115.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATRX.

[48045] Butyrophilin, subfamily 2, member a2 (BTN2A2, Accession NP_008926.2) is another GAM5346 target gene, herein designated TARGET GENE. BTN2A2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BTN2A2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BTN2A2 BINDING SITE, designated SEQ ID:2449, to the nucleotide sequence

of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48046] Another function of GAM5346 is therefore inhibition of Butyrophilin, subfamily 2, member a2 (BTN2A2, Accession NP_008926.2) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BTN2A2.

[48047] Blood vessel epicardial substance (BVES, Accession NP_009004.2) is another GAM5346 target gene, herein designated TARGET GENE. BVES BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BVES, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BVES BINDING SITE, designated SEQ ID:7200, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48048] Another function of GAM5346 is therefore inhibition of Blood vessel epicardial substance (BVES, Accession NP_009004.2), a gene which plays an important role in vertebrate heart development. Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with BVES.

[48049] The function of BVES and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM180.1.Chromosome 1 open reading frame 17 (C1orf17, Accession NP_055916.1) is another GAM5346 target gene, herein designated TARGET GENE. C1orf17 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C1orf17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C1orf17 BINDING SITE, designated SEQ ID:9464, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48050] Another function of GAM5346 is therefore inhibition of Chromosome 1 open reading frame 17 (C1orf17, Accession NP_055916.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1orf17.

[48051] Chromosome 1 open reading frame 21 (C1orf21, Accession NP_110433.1) is another GAM5346 target gene, herein designated TARGET GENE. C1orf21 BINDING SITE is

a target binding site found in the 3` untranslated region of mRNA encoded by C1orf21, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C1orf21 BINDING SITE, designated SEQ ID:2690, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48052] Another function of GAM5346 is therefore inhibition of Chromosome 1 open reading frame 21 (C1orf21, Accession NP_110433.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1orf21.

[48053] C1QDC1 (Accession NP_115532.1) is another GAM5346 target gene, herein designated TARGET GENE. C1QDC1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by C1QDC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C1QDC1 BINDING SITE, designated SEQ ID:6143, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ

ID:319.

[48054] Another function of GAM5346 is therefore inhibition of C1QDC1 (Accession NP_115532.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1QDC1.

[48055] Chromosome 20 open reading frame 38 (C20orf38, Accession NP_060797.1) is another GAM5346 target gene, herein designated TARGET GENE. C20orf38 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C20orf38, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf38 BINDING SITE, designated SEQ ID:9565, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48056] Another function of GAM5346 is therefore inhibition of Chromosome 20 open reading frame 38 (C20orf38, Accession NP_060797.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf38.

[48057] Chromosome 21 open reading frame 109 (C21orf109, Ac-

cession NP_620418.1) is another GAM5346 target gene, herein designated TARGET GENE. C21orf109 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by C21orf109, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C21orf109 BINDING SITE, designated SEQ ID:13650, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48058] Another function of GAM5346 is therefore inhibition of Chromosome 21 open reading frame 109 (C21orf109, Accession NP_620418.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C21orf109.

[48059] Chromosome 5 open reading frame 6 (C5orf6, Accession NP_057689.1) is another GAM5346 target gene, herein designated TARGET GENE. C5orf6 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by C5orf6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C5orf6 BINDING SITE, designated

SEQ ID:4877, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48060] Another function of GAM5346 is therefore inhibition of Chromosome 5 open reading frame 6 (C5orf6, Accession NP_057689.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C5orf6.

[48061] Carbonic anhydrase viii (CA8, Accession NP_004047.3) is another GAM5346 target gene, herein designated TARGET GENE. CA8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CA8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CA8 BINDING SITE, designated SEQ ID:2246, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48062] Another function of GAM5346 is therefore inhibition of Carbonic anhydrase viii (CA8, Accession NP_004047.3) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CA8.

[48063] Calcium/calmodulin-dependent protein kinase (cam kinase) ii alpha (CAMK2A, Accession NP_057065.2) is another GAM5346 target gene, herein designated TARGET GENE. CAMK2A BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CAMK2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAMK2A BINDING SITE, designated SEQ ID:12760, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48064] Another function of GAM5346 is therefore inhibition of Calcium/calmodulin-dependent protein kinase (cam kinase) ii alpha (CAMK2A, Accession NP_057065.2), a gene which may modulate the synaptic events required for the consolidation of memory traces in cortical networks. Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAMK2A.

[48065] The function of CAMK2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM223.1.Calcium/calmodulin-dependent protein kinase (cam kinase) ii alpha (CAMK2A, Accession NP_741960.1) is another GAM5346 target gene, herein designated TARGET GENE. CAMK2A BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CAMK2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAMK2A BINDING SITE, designated SEQ ID:12760, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48066] Another function of GAM5346 is therefore inhibition of Calcium/calmodulin-dependent protein kinase (cam kinase) ii alpha (CAMK2A, Accession NP_741960.1), a gene which may modulate the synaptic events required for the consolidation of memory traces in cortical networks. Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAMK2A.

[48067] The function of CAMK2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM223.1.CARF (Accession NP_060102.1) is another GAM5346 target gene, herein designated TARGET GENE. CARF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CARF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CARF BINDING SITE, designated SEQ ID:11378, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48068] Another function of GAM5346 is therefore inhibition of CARF (Accession NP_060102.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CARF.

[48069] Cat eye syndrome chromosome region, candidate 1 (CECR1, Accession NP_803124.1) is another GAM5346 target gene, herein designated TARGET GENE. CECR1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CECR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CECR1 BINDING SITE, designated

SEQ ID:12603, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48070] Another function of GAM5346 is therefore inhibition of Cat eye syndrome chromosome region, candidate 1 (CECR1, Accession NP_803124.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CECR1.

[48071] CGI-141 (Accession NP_057156.1) is another GAM5346 target gene, herein designated TARGET GENE. CGI-141 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CGI-141, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CGI-141 BINDING SITE, designated SEQ ID:6784, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48072] Another function of GAM5346 is therefore inhibition of CGI-141 (Accession NP_057156.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CGI-141.

[48073] Chondrolectin (CHODL, Accession NP_079220.2) is another GAM5346 target gene, herein designated TARGET GENE. CHODL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CHODL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CHODL BINDING SITE, designated SEQ ID:3700, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48074] Another function of GAM5346 is therefore inhibition of Chondrolectin (CHODL, Accession NP_079220.2) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CHODL.

[48075] Cholinergic receptor, nicotinic, alpha polypeptide 3 (CHRNA3, Accession NP_000734.2) is another GAM5346 target gene, herein designated TARGET GENE. CHRNA3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CHRNA3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of CHRNA3 BINDING SITE, designated SEQ ID:15387, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48076] Another function of GAM5346 is therefore inhibition of Cholinergic receptor, nicotinic, alpha polypeptide 3 (CHRNA3, Accession NP_000734.2), a gene which binds acetylcholine and opens an ion- conducting channel across the plasma membrane. and therefore may be associated with Myasthenia gravis. Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of Myasthenia gravis, and of other diseases and clinical conditions associated with CHRNA3.

[48077] The function of CHRNA3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM404.2.CHST10 (Accession NP_004845.1) is another GAM5346 target gene, herein designated TARGET GENE. CHST10 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CHST10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of CHST10 BINDING SITE, designated SEQ ID:14727, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48078] Another function of GAM5346 is therefore inhibition of CHST10 (Accession NP_004845.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CHST10.

[48079] Clock homolog (mouse) (CLOCK, Accession NP_004889.1) is another GAM5346 target gene, herein designated TARGET GENE. CLOCK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CLOCK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLOCK BINDING SITE, designated SEQ ID:6844, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48080] Another function of GAM5346 is therefore inhibition of Clock homolog (mouse) (CLOCK, Accession NP_004889.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical condi-

tions associated with CLOCK.

[48081] Ccr4-not transcription complex, subunit 7 (CNOT7, Accession NP_473367.1) is another GAM5346 target gene, herein designated TARGET GENE. CNOT7 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CNOT7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CNOT7 BINDING SITE, designated SEQ ID:12054, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48082] Another function of GAM5346 is therefore inhibition of Ccr4-not transcription complex, subunit 7 (CNOT7, Accession NP_473367.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CNOT7.

[48083] Collagen, type iv, alpha 3 (goodpasture antigen) binding protein (COL4A3BP, Accession NP_112729.1) is another GAM5346 target gene, herein designated TARGET GENE. COL4A3BP BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by COL4A3BP, corresponding to a target

binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COL4A3BP BINDING SITE, designated SEQ ID:13701, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48084] Another function of GAM5346 is therefore inhibition of Collagen, type iv, alpha 3 (goodpasture antigen) binding protein (COL4A3BP, Accession NP_112729.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COL4A3BP.

[48085] Collagen, type iv, alpha 3 (goodpasture antigen) binding protein (COL4A3BP, Accession NP_005704.1) is another GAM5346 target gene, herein designated TARGET GENE. COL4A3BP BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by COL4A3BP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COL4A3BP BINDING SITE, designated SEQ ID:13701, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA,

also designated SEQ ID:319.

[48086] Another function of GAM5346 is therefore inhibition of Collagen, type iv, alpha 3 (goodpasture antigen) binding protein (COL4A3BP, Accession NP_005704.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COL4A3BP.

[48087] Collectin sub-family member 12 (COLEC12, Accession NP_110408.2) is another GAM5346 target gene, herein designated TARGET GENE. COLEC12 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by COLEC12, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COLEC12 BINDING SITE, designated SEQ ID:1211, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48088] Another function of GAM5346 is therefore inhibition of Collectin sub-family member 12 (COLEC12, Accession NP_110408.2) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COLEC12.

[48089] Cytochrome c oxidase subunit vb (COX5B, Accession NP_001853.2) is another GAM5346 target gene, herein designated TARGET GENE. COX5B BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by COX5B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COX5B BINDING SITE, designated SEQ ID:15248, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48090] Another function of GAM5346 is therefore inhibition of Cytochrome c oxidase subunit vb (COX5B, Accession NP_001853.2) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COX5B.

[48091] Cytochrome c oxidase subunit viia polypeptide 2 like (COX7A2L, Accession NP_004709.2) is another GAM5346 target gene, herein designated TARGET GENE. COX7A2L BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by COX7A2L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of COX7A2L BINDING SITE, designated SEQ ID:14171, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48092] Another function of GAM5346 is therefore inhibition of Cytochrome c oxidase subunit viia polypeptide 2 like (COX7A2L, Accession NP_004709.2) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COX7A2L.

[48093] Cofactor required for sp1 transcriptional activation, subunit 3, 130kda (CRSP3, Accession NP_004821.2) is another GAM5346 target gene, herein designated TARGET GENE. CRSP3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CRSP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CRSP3 BINDING SITE, designated SEQ ID:19755, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48094] Another function of GAM5346 is therefore inhibition of

Cofactor required for sp1 transcriptional activation, subunit 3, 130kda (CRSP3, Accession NP_004821.2) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CRSP3.

[48095] Crystallin, lambda 1 (CRYL1, Accession NP_057058.1) is another GAM5346 target gene, herein designated TARGET GENE. CRYL1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CRYL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CRYL1 BINDING SITE, designated SEQ ID:18424, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48096] Another function of GAM5346 is therefore inhibition of Crystallin, lambda 1 (CRYL1, Accession NP_057058.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CRYL1.

[48097] Dead/h (asp-glu-ala-asp/his) box polypeptide 11 (chl1-like helicase homolog, s. cerevisiae) (DDX11, Accession NP_085911.1) is another GAM5346 target gene,

herein designated TARGET GENE. DDX11 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DDX11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DDX11 BINDING SITE, designated SEQ ID:13852, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48098] Another function of GAM5346 is therefore inhibition of Dead/h (asp-glu-ala-asp/his) box polypeptide 11 (chl1-like helicase homolog, s. cerevisiae) (DDX11, Accession NP_085911.1), a gene which could be an ATP- dependent DNA- binding helicase and may intervene in cell cycle regulation. Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DDX11.

[48099] The function of DDX11 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.Dead/h (asp-glu-ala-asp/his) box polypeptide 11 (chl1-like helicase homolog, s. cerevisiae) (DDX11, Accession NP_004390.2) is another GAM5346 target gene,

herein designated TARGET GENE. DDX11 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DDX11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DDX11 BINDING SITE, designated SEQ ID:13852, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48100] Another function of GAM5346 is therefore inhibition of Dead/h (asp-glu-ala-asp/his) box polypeptide 11 (chl1-like helicase homolog, s. cerevisiae) (DDX11, Accession NP_004390.2), a gene which could be an ATP- dependent DNA- binding helicase and may intervene in cell cycle regulation. Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DDX11.

[48101] The function of DDX11 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.Dead/h (asp-glu-ala-asp/his) box polypeptide 11 (chl1-like helicase homolog, s. cerevisiae) (DDX11, Accession NP_085913.1) is another GAM5346 target gene,

herein designated TARGET GENE. DDX11 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DDX11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DDX11 BINDING SITE, designated SEQ ID:13852, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48102] Another function of GAM5346 is therefore inhibition of Dead/h (asp-glu-ala-asp/his) box polypeptide 11 (chl1-like helicase homolog, s. cerevisiae) (DDX11, Accession NP_085913.1), a gene which could be an ATP- dependent DNA- binding helicase and may intervene in cell cycle regulation. Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DDX11.

[48103] The function of DDX11 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.DDX56 (Accession NP_061955.1) is another GAM5346 target gene, herein designated TARGET GENE. DDX56 BINDING SITE is a target binding site found in the

3` untranslated region of mRNA encoded by DDX56, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DDX56 BINDING SITE, designated SEQ ID:13267, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48104] Another function of GAM5346 is therefore inhibition of DDX56 (Accession NP_061955.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DDX56.

[48105] DKFZp434E1119 (Accession XP_210937.1) is another GAM5346 target gene, herein designated TARGET GENE. DKFZp434E1119 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp434E1119, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp434E1119 BINDING SITE, designated SEQ ID:3872, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48106] Another function of GAM5346 is therefore inhibition of

DKFZp434E1119 (Accession XP_210937.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp434E1119.

[48107] DKFZP564D166 (Accession NP_056438.1) is another GAM5346 target gene, herein designated TARGET GENE. DKFZP564D166 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DKFZP564D166, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP564D166 BINDING SITE, designated SEQ ID:14703, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48108] Another function of GAM5346 is therefore inhibition of DKFZP564D166 (Accession NP_056438.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP564D166.

[48109] DKFZp761O17121 (Accession NP_115663.1) is another GAM5346 target gene, herein designated TARGET GENE. DKFZp761O17121 BINDING SITE is a target binding site

found in the 5` untranslated region of mRNA encoded by DKFZp761O17121, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761O17121 BINDING SITE, designated SEQ ID:15142, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48110] Another function of GAM5346 is therefore inhibition of DKFZp761O17121 (Accession NP_115663.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761O17121.

[48111] Doublesex and mab-3 related transcription factor 1 (DMRT1, Accession NP_068770.1) is another GAM5346 target gene, herein designated TARGET GENE. DMRT1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DMRT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DMRT1 BINDING SITE, designated SEQ ID:12585, to the nucleotide sequence of GAM5346 RNA, herein designated

GAM RNA, also designated SEQ ID:319.

[48112] Another function of GAM5346 is therefore inhibition of Doublesex and mab-3 related transcription factor 1 (DMRT1, Accession NP_068770.1), a gene which May be involved in male sexual development. Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DMRT1.

[48113] The function of DMRT1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM505.1.Eukaryotic translation elongation factor 1 delta (guanine nucleotide exchange protein) (EEF1D, Accession NP_001951.2) is another GAM5346 target gene, herein designated TARGET GENE. EEF1D BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by EEF1D, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EEF1D BINDING SITE, designated SEQ ID:10991, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48114] Another function of GAM5346 is therefore inhibition of

Eukaryotic translation elongation factor 1 delta (guanine nucleotide exchange protein) (EEF1D, Accession NP_001951.2) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EEF1D.

[48115] Eukaryotic translation initiation factor 4e-like 3 (EIF4EL3, Accession NP_004837.1) is another GAM5346 target gene, herein designated TARGET GENE. EIF4EL3 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by EIF4EL3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EIF4EL3 BINDING SITE, designated SEQ ID:14958, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48116] Another function of GAM5346 is therefore inhibition of Eukaryotic translation initiation factor 4e-like 3 (EIF4EL3, Accession NP_004837.1), a gene which is a cap- binding protein. Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EIF4EL3.

[48117] The function of EIF4EL3 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1713.2.FLJ10204 (Accession NP_060494.1) is another GAM5346 target gene, herein designated TARGET GENE. FLJ10204 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10204, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10204 BINDING SITE, designated SEQ ID:19088, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48118] Another function of GAM5346 is therefore inhibition of FLJ10204 (Accession NP_060494.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10204.

[48119] FLJ11267 (Accession NP_062553.1) is another GAM5346 target gene, herein designated TARGET GENE. FLJ11267 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ11267, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11267 BINDING SITE, designated SEQ ID:5853, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48120] Another function of GAM5346 is therefore inhibition of FLJ11267 (Accession NP_062553.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11267.

[48121] FLJ11724 (Accession XP_044426.1) is another GAM5346 target gene, herein designated TARGET GENE. FLJ11724 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ11724, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11724 BINDING SITE, designated SEQ ID:11865, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48122] Another function of GAM5346 is therefore inhibition of FLJ11724 (Accession XP_044426.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ11724.

[48123] FLJ11806 (Accession NP_079100.1) is another GAM5346 target gene, herein designated TARGET GENE. FLJ11806 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ11806, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11806 BINDING SITE, designated SEQ ID:12794, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48124] Another function of GAM5346 is therefore inhibition of FLJ11806 (Accession NP_079100.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11806.

[48125] FLJ12294 (Accession NP_079376.1) is another GAM5346 target gene, herein designated TARGET GENE. FLJ12294 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12294, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ12294 BINDING SITE, designated SEQ ID:7539, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48126] Another function of GAM5346 is therefore inhibition of FLJ12294 (Accession NP_079376.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12294.

[48127] FLJ12891 (Accession NP_079226.1) is another GAM5346 target gene, herein designated TARGET GENE. FLJ12891 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12891, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12891 BINDING SITE, designated SEQ ID:2301, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48128] Another function of GAM5346 is therefore inhibition of FLJ12891 (Accession NP_079226.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ12891.

[48129] FLJ14001 (Accession NP_078953.2) is another GAM5346 target gene, herein designated TARGET GENE. FLJ14001 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ14001, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14001 BINDING SITE, designated SEQ ID:9178, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48130] Another function of GAM5346 is therefore inhibition of FLJ14001 (Accession NP_078953.2) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14001.

[48131] FLJ14816 (Accession NP_116234.1) is another GAM5346 target gene, herein designated TARGET GENE. FLJ14816 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ14816, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ14816 BINDING SITE, designated SEQ ID:10584, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48132] Another function of GAM5346 is therefore inhibition of FLJ14816 (Accession NP_116234.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14816.

[48133] FLJ20209 (Accession XP_098142.1) is another GAM5346 target gene, herein designated TARGET GENE. FLJ20209 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20209, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20209 BINDING SITE, designated SEQ ID:2433, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48134] Another function of GAM5346 is therefore inhibition of FLJ20209 (Accession XP_098142.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20209.

[48135] FLJ20300 (Accession NP_060223.1) is another GAM5346 target gene, herein designated TARGET GENE. FLJ20300 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20300, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20300 BINDING SITE, designated SEQ ID:6291, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48136] Another function of GAM5346 is therefore inhibition of FLJ20300 (Accession NP_060223.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20300.

[48137] FLJ21272 (Accession NP_079308.1) is another GAM5346 target gene, herein designated TARGET GENE. FLJ21272 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ21272, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ21272 BINDING SITE, designated SEQ ID:15440, to the

nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48138] Another function of GAM5346 is therefore inhibition of FLJ21272 (Accession NP_079308.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ21272.

[48139] FLJ23259 (Accession NP_079003.1) is another GAM5346 target gene, herein designated TARGET GENE. FLJ23259 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ23259, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23259 BINDING SITE, designated SEQ ID:19128, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48140] Another function of GAM5346 is therefore inhibition of FLJ23259 (Accession NP_079003.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23259.

[48141] FLJ23861 (Accession NP_689732.1) is another GAM5346

target gene, herein designated TARGET GENE. FLJ23861 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ23861, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23861 BINDING SITE, designated SEQ ID:11394, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48142] Another function of GAM5346 is therefore inhibition of FLJ23861 (Accession NP_689732.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23861.

[48143] FLJ25359 (Accession NP_653188.1) is another GAM5346 target gene, herein designated TARGET GENE. FLJ25359 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ25359, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ25359 BINDING SITE, designated SEQ ID:16387, to the nucleotide sequence of GAM5346 RNA, herein designated

GAM RNA, also designated SEQ ID:319.

[48144] Another function of GAM5346 is therefore inhibition of FLJ25359 (Accession NP_653188.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ25359.

[48145] FLJ32028 (Accession NP_689893.1) is another GAM5346 target gene, herein designated TARGET GENE. FLJ32028 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32028, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32028 BINDING SITE, designated SEQ ID:5186, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48146] Another function of GAM5346 is therefore inhibition of FLJ32028 (Accession NP_689893.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32028.

[48147] FLJ32940 (Accession NP_653220.1) is another GAM5346 target gene, herein designated TARGET GENE. FLJ32940

BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ32940, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32940 BINDING SITE, designated SEQ ID:9834, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48148] Another function of GAM5346 is therefore inhibition of FLJ32940 (Accession NP_653220.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32940.

[48149] FLJ35728 (Accession NP_689823.1) is another GAM5346 target gene, herein designated TARGET GENE. FLJ35728 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ35728, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ35728 BINDING SITE, designated SEQ ID:14579, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48150] Another function of GAM5346 is therefore inhibition of FLJ35728 (Accession NP_689823.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ35728.

[48151] FLJ35801 (Accession NP_694589.1) is another GAM5346 target gene, herein designated TARGET GENE. FLJ35801 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ35801, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ35801 BINDING SITE, designated SEQ ID:3807, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48152] Another function of GAM5346 is therefore inhibition of FLJ35801 (Accession NP_694589.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ35801.

[48153] FLJ36576 (Accession NP_775793.1) is another GAM5346 target gene, herein designated TARGET GENE. FLJ36576 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by FLJ36576, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ36576 BINDING SITE, designated SEQ ID:11409, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48154] Another function of GAM5346 is therefore inhibition of FLJ36576 (Accession NP_775793.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ36576.

[48155] FLJ37228 (Accession NP_787113.1) is another GAM5346 target gene, herein designated TARGET GENE. FLJ37228 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ37228, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ37228 BINDING SITE, designated SEQ ID:11241, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48156] Another function of GAM5346 is therefore inhibition of

FLJ37228 (Accession NP_787113.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ37228.

[48157] FLJ37307 (Accession NP_848610.1) is another GAM5346 target gene, herein designated TARGET GENE. FLJ37307 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ37307, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ37307 BINDING SITE, designated SEQ ID:12590, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48158] Another function of GAM5346 is therefore inhibition of FLJ37307 (Accession NP_848610.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ37307.

[48159] Fibronectin leucine rich transmembrane protein 2 (FLRT2, Accession NP_037363.1) is another GAM5346 target gene, herein designated TARGET GENE. FLRT2 BINDING SITE is a target binding site found in the 3` untranslated region of

mRNA encoded by FLRT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLRT2 BINDING SITE, designated SEQ ID:11704, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48160] Another function of GAM5346 is therefore inhibition of Fibronectin leucine rich transmembrane protein 2 (FLRT2, Accession NP_037363.1), a gene which may have a function in cell adhesion and/or receptor signaling. Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLRT2.

[48161] The function of FLRT2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.G2 (Accession XP_039515.8) is another GAM5346 target gene, herein designated TARGET GENE. G2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by G2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates

the complementarity of the nucleotide sequences of G2 BINDING SITE, designated SEQ ID:13665, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48162] Another function of GAM5346 is therefore inhibition of G2 (Accession XP_039515.8) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with G2.

[48163] GPR124 (Accession NP_116166.6) is another GAM5346 target gene, herein designated TARGET GENE. GPR124 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GPR124, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPR124 BINDING SITE, designated SEQ ID:6815, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48164] Another function of GAM5346 is therefore inhibition of GPR124 (Accession NP_116166.6) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPR124.

[48165] G-rich rna sequence binding factor 1 (GRSF1, Accession NP_002083.1) is another GAM5346 target gene, herein designated TARGET GENE. GRSF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GRSF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GRSF1 BINDING SITE, designated SEQ ID:17530, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48166] Another function of GAM5346 is therefore inhibition of G-rich rna sequence binding factor 1 (GRSF1, Accession NP_002083.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GRSF1.

[48167] High-mobility group 20a (HMG20A, Accession NP_060670.1) is another GAM5346 target gene, herein designated TARGET GENE. HMG20A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HMG20A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of HMG20A BINDING SITE, designated SEQ ID:1619, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48168] Another function of GAM5346 is therefore inhibition of High-mobility group 20a (HMG20A, Accession NP_060670.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HMG20A.

[48169] Isoleucine-trna synthetase (IARS, Accession NP_002152.1) is another GAM5346 target gene, herein designated TARGET GENE. IARS BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by IARS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IARS BINDING SITE, designated SEQ ID:8969, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48170] Another function of GAM5346 is therefore inhibition of Isoleucine-trna synthetase (IARS, Accession NP_002152.1), a gene which functions in protein biosyn-

thesis. Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IARS.

[48171] The function of IARS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM291.1.Isoleucine-trna synthetase (IARS, Accession NP_038203.1) is another GAM5346 target gene, herein designated TARGET GENE. IARS BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by IARS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IARS BINDING SITE, designated SEQ ID:8969, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48172] Another function of GAM5346 is therefore inhibition of Isoleucine-trna synthetase (IARS, Accession NP_038203.1), a gene which functions in protein biosynthesis. Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IARS.

[48173] The function of IARS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM291.1.Interleukin 23, alpha subunit p19 (IL23A, Accession NP_057668.1) is another GAM5346 target gene, herein designated TARGET GENE. IL23A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IL23A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL23A BINDING SITE, designated SEQ ID:15401, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48174] Another function of GAM5346 is therefore inhibition of Interleukin 23, alpha subunit p19 (IL23A, Accession NP_057668.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL23A.

[48175] Inositol 1,4,5-trisphosphate 3-kinase b (ITPKB, Accession NP_002212.1) is another GAM5346 target gene, herein designated TARGET GENE. ITPKB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA

encoded by ITPKB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ITPKB BINDING SITE, designated SEQ ID:8612, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48176] Another function of GAM5346 is therefore inhibition of Inositol 1,4,5-trisphosphate 3-kinase b (ITPKB, Accession NP_002212.1), a gene which is a type B inositol 1,4,5-triphosphate 3 kinase. Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ITPKB.

[48177] The function of ITPKB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.JMJD1 (Accession NP_060903.2) is another GAM5346 target gene, herein designated TARGET GENE. JMJD1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by JMJD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

JMJD1 BINDING SITE, designated SEQ ID:1010, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48178] Another function of GAM5346 is therefore inhibition of JMJD1 (Accession NP_060903.2) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with JMJD1.

[48179] Potassium voltage-gated channel, shaker-related subfamily, member 3 (KCNA3, Accession NP_002223.2) is another GAM5346 target gene, herein designated TARGET GENE. KCNA3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KCNA3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNA3 BINDING SITE, designated SEQ ID:9276, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48180] Another function of GAM5346 is therefore inhibition of Potassium voltage-gated channel, shaker-related subfamily, member 3 (KCNA3, Accession NP_002223.2) . Accordingly, utilities of GAM5346 include diagnosis, prevention

and treatment of diseases and clinical conditions associated with KCNA3.

[48181] KIAA0218 (Accession NP_055575.1) is another GAM5346 target gene, herein designated TARGET GENE. KIAA0218 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0218, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0218 BINDING SITE, designated SEQ ID:15087, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48182] Another function of GAM5346 is therefore inhibition of KIAA0218 (Accession NP_055575.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0218.

[48183] KIAA0962 (Accession XP_290942.1) is another GAM5346 target gene, herein designated TARGET GENE. KIAA0962 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0962, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of KIAA0962 BINDING SITE, designated SEQ ID:5013, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48184] Another function of GAM5346 is therefore inhibition of KIAA0962 (Accession XP_290942.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0962.

[48185] KIAA1554 (Accession XP_290768.1) is another GAM5346 target gene, herein designated TARGET GENE. KIAA1554 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1554, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1554 BINDING SITE, designated SEQ ID:19516, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48186] Another function of GAM5346 is therefore inhibition of KIAA1554 (Accession XP_290768.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

KIAA1554.

[48187] KIAA1673 (Accession XP_047672.4) is another GAM5346 target gene, herein designated TARGET GENE. KIAA1673 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1673, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1673 BINDING SITE, designated SEQ ID:13140, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48188] Another function of GAM5346 is therefore inhibition of KIAA1673 (Accession XP_047672.4) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1673.

[48189] KIAA1998 (Accession XP_068710.3) is another GAM5346 target gene, herein designated TARGET GENE. KIAA1998 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1998, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

KIAA1998 BINDING SITE, designated SEQ ID:1079, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48190] Another function of GAM5346 is therefore inhibition of KIAA1998 (Accession XP_068710.3) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1998.

[48191] LOC115442 (Accession XP_052510.3) is another GAM5346 target gene, herein designated TARGET GENE. LOC115442 BINDING SITE1 and LOC115442 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC115442, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC115442 BINDING SITE1 and LOC115442 BINDING SITE2, designated SEQ ID:14698 and SEQ ID:16018 respectively, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48192] Another function of GAM5346 is therefore inhibition of LOC115442 (Accession XP_052510.3) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC115442.

[48193] LOC126037 (Accession XP_058967.6) is another GAM5346 target gene, herein designated TARGET GENE. LOC126037 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC126037, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC126037 BINDING SITE, designated SEQ ID:10991, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48194] Another function of GAM5346 is therefore inhibition of LOC126037 (Accession XP_058967.6) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC126037.

[48195] LOC130985 (Accession XP_059490.3) is another GAM5346 target gene, herein designated TARGET GENE. LOC130985 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC130985, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC130985 BINDING SITE, designated SEQ ID:3929, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48196] Another function of GAM5346 is therefore inhibition of LOC130985 (Accession XP_059490.3) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC130985.

[48197] LOC144866 (Accession XP_096699.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC144866 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC144866, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144866 BINDING SITE, designated SEQ ID:780, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48198] Another function of GAM5346 is therefore inhibition of

LOC144866 (Accession XP_096699.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144866.

[48199] LOC145644 (Accession XP_035608.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC145644 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC145644, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145644 BINDING SITE, designated SEQ ID:16433, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48200] Another function of GAM5346 is therefore inhibition of LOC145644 (Accession XP_035608.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145644.

[48201] LOC145786 (Accession XP_096860.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC145786 BINDING SITE is a target binding site found in

the 5` untranslated region of mRNA encoded by LOC145786, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145786 BINDING SITE, designated SEQ ID:2737, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48202] Another function of GAM5346 is therefore inhibition of LOC145786 (Accession XP_096860.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145786.

[48203] LOC145957 (Accession NP_612640.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC145957 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC145957, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145957 BINDING SITE, designated SEQ ID:11305, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:319.

[48204] Another function of GAM5346 is therefore inhibition of LOC145957 (Accession NP_612640.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145957.

[48205] LOC148918 (Accession XP_086361.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC148918 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC148918, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC148918 BINDING SITE, designated SEQ ID:8659, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48206] Another function of GAM5346 is therefore inhibition of LOC148918 (Accession XP_086361.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148918.

[48207] LOC149127 (Accession XP_097584.1) is another

GAM5346 target gene, herein designated TARGET GENE. LOC149127 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC149127, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149127 BINDING SITE, designated SEQ ID:11810, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48208] Another function of GAM5346 is therefore inhibition of LOC149127 (Accession XP_097584.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149127.

[48209] LOC149372 (Accession XP_086509.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC149372 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC149372, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149372 BINDING SITE, desig-

nated SEQ ID:16788, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48210] Another function of GAM5346 is therefore inhibition of LOC149372 (Accession XP_086509.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149372.

[48211] LOC155060 (Accession XP_098650.3) is another GAM5346 target gene, herein designated TARGET GENE. LOC155060 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC155060, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC155060 BINDING SITE, designated SEQ ID:10054, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48212] Another function of GAM5346 is therefore inhibition of LOC155060 (Accession XP_098650.3) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC155060.

[48213] LOC158450 (Accession XP_088580.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC158450 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC158450, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158450 BINDING SITE, designated SEQ ID:1358, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48214] Another function of GAM5346 is therefore inhibition of LOC158450 (Accession XP_088580.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158450.

[48215] LOC196337 (Accession XP_113696.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC196337 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC196337, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC196337 BINDING SITE, designated SEQ ID:3387, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48216] Another function of GAM5346 is therefore inhibition of LOC196337 (Accession XP_113696.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC196337.

[48217] LOC200008 (Accession XP_114089.3) is another GAM5346 target gene, herein designated TARGET GENE. LOC200008 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC200008, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC200008 BINDING SITE, designated SEQ ID:11957, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48218] Another function of GAM5346 is therefore inhibition of LOC200008 (Accession XP_114089.3) . Accordingly, utili-

ties of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC200008.

[48219] LOC202451 (Accession XP_117401.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC202451 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC202451, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC202451 BINDING SITE, designated SEQ ID:2543, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48220] Another function of GAM5346 is therefore inhibition of LOC202451 (Accession XP_117401.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC202451.

[48221] LOC220477 (Accession XP_071675.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC220477 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by

LOC220477, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC220477 BINDING SITE, designated SEQ ID:17554, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48222] Another function of GAM5346 is therefore inhibition of LOC220477 (Accession XP_071675.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC220477.

[48223] LOC254719 (Accession XP_171166.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC254719 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC254719, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC254719 BINDING SITE, designated SEQ ID:17345, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48224] Another function of GAM5346 is therefore inhibition of LOC254719 (Accession XP_171166.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC254719.

[48225] LOC283119 (Accession XP_210895.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC283119 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283119, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283119 BINDING SITE, designated SEQ ID:18560, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48226] Another function of GAM5346 is therefore inhibition of LOC283119 (Accession XP_210895.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283119.

[48227] LOC283387 (Accession XP_211007.1) is another GAM5346 target gene, herein designated TARGET GENE.

LOC283387 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283387, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283387 BINDING SITE, designated SEQ ID:884, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48228] Another function of GAM5346 is therefore inhibition of LOC283387 (Accession XP_211007.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283387.

[48229] LOC283516 (Accession XP_211072.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC283516 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283516, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283516 BINDING SITE, designated SEQ ID:763, to the nucleotide sequence of

GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48230] Another function of GAM5346 is therefore inhibition of LOC283516 (Accession XP_211072.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283516.

[48231] LOC283521 (Accession XP_208705.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC283521 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283521, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283521 BINDING SITE, designated SEQ ID:12590, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48232] Another function of GAM5346 is therefore inhibition of LOC283521 (Accession XP_208705.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283521.

[48233] LOC283887 (Accession XP_211248.2) is another GAM5346 target gene, herein designated TARGET GENE. LOC283887 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283887, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283887 BINDING SITE, designated SEQ ID:6494, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48234] Another function of GAM5346 is therefore inhibition of LOC283887 (Accession XP_211248.2) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283887.

[48235] LOC283925 (Accession XP_208907.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC283925 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283925, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC283925 BINDING SITE, designated SEQ ID:1883, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48236] Another function of GAM5346 is therefore inhibition of LOC283925 (Accession XP_208907.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283925.

[48237] LOC284019 (Accession XP_211302.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC284019 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284019, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284019 BINDING SITE, designated SEQ ID:8913, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48238] Another function of GAM5346 is therefore inhibition of LOC284019 (Accession XP_211302.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC284019.

[48239] LOC284135 (Accession XP_209032.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC284135 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284135, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284135 BINDING SITE, designated SEQ ID:1642, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48240] Another function of GAM5346 is therefore inhibition of LOC284135 (Accession XP_209032.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284135.

[48241] LOC284221 (Accession XP_211392.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC284221 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284221, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284221 BINDING SITE, designated SEQ ID:1752, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48242] Another function of GAM5346 is therefore inhibition of LOC284221 (Accession XP_211392.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284221.

[48243] LOC284262 (Accession XP_211402.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC284262 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284262, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284262 BINDING SITE, designated SEQ ID:1292, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48244] Another function of GAM5346 is therefore inhibition of

LOC284262 (Accession XP_211402.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284262.

[48245] LOC284506 (Accession XP_211498.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC284506 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284506, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284506 BINDING SITE, designated SEQ ID:417, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48246] Another function of GAM5346 is therefore inhibition of LOC284506 (Accession XP_211498.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284506.

[48247] LOC284542 (Accession XP_209254.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC284542 BINDING SITE is a target binding site found in

the 3` untranslated region of mRNA encoded by LOC284542, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284542 BINDING SITE, designated SEQ ID:15471, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48248] Another function of GAM5346 is therefore inhibition of LOC284542 (Accession XP_209254.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284542.

[48249] LOC284561 (Accession XP_211519.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC284561 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284561, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284561 BINDING SITE, designated SEQ ID:9611, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:319.

[48250] Another function of GAM5346 is therefore inhibition of LOC284561 (Accession XP_211519.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284561.

[48251] LOC284751 (Accession XP_211622.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC284751 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284751, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284751 BINDING SITE, designated SEQ ID:10156, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48252] Another function of GAM5346 is therefore inhibition of LOC284751 (Accession XP_211622.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284751.

[48253] LOC284796 (Accession XP_208248.1) is another

GAM5346 target gene, herein designated TARGET GENE. LOC284796 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284796, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284796 BINDING SITE, designated SEQ ID:16414, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48254] Another function of GAM5346 is therefore inhibition of LOC284796 (Accession XP_208248.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284796.

[48255] LOC284899 (Accession XP_211680.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC284899 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284899, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284899 BINDING SITE, desig-

nated SEQ ID:7326, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48256] Another function of GAM5346 is therefore inhibition of LOC284899 (Accession XP_211680.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284899.

[48257] LOC284925 (Accession XP_209414.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC284925 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284925, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284925 BINDING SITE, designated SEQ ID:15142, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48258] Another function of GAM5346 is therefore inhibition of LOC284925 (Accession XP_209414.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC284925.

[48259] LOC285192 (Accession XP_209508.3) is another GAM5346 target gene, herein designated TARGET GENE. LOC285192 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285192, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285192 BINDING SITE, designated SEQ ID:3929, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48260] Another function of GAM5346 is therefore inhibition of LOC285192 (Accession XP_209508.3) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285192.

[48261] LOC285535 (Accession XP_211930.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC285535 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285535, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285535 BINDING SITE, designated SEQ ID:5061, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48262] Another function of GAM5346 is therefore inhibition of LOC285535 (Accession XP_211930.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285535.

[48263] LOC285822 (Accession XP_209777.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC285822 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285822, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285822 BINDING SITE, designated SEQ ID:8268, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48264] Another function of GAM5346 is therefore inhibition of LOC285822 (Accession XP_209777.1) . Accordingly, utili-

ties of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285822.

[48265] LOC285857 (Accession XP_212054.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC285857 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285857, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285857 BINDING SITE, designated SEQ ID:1533, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48266] Another function of GAM5346 is therefore inhibition of LOC285857 (Accession XP_212054.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285857.

[48267] LOC338558 (Accession XP_290465.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC338558 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by

LOC338558, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338558 BINDING SITE, designated SEQ ID:17259, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48268] Another function of GAM5346 is therefore inhibition of LOC338558 (Accession XP_290465.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338558.

[48269] LOC339232 (Accession XP_294874.2) is another GAM5346 target gene, herein designated TARGET GENE. LOC339232 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339232, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339232 BINDING SITE, designated SEQ ID:11810, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48270] Another function of GAM5346 is therefore inhibition of LOC339232 (Accession XP_294874.2) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339232.

[48271] LOC339829 (Accession XP_291028.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC339829 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339829, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339829 BINDING SITE, designated SEQ ID:6647, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48272] Another function of GAM5346 is therefore inhibition of LOC339829 (Accession XP_291028.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339829.

[48273] LOC340074 (Accession XP_295148.1) is another GAM5346 target gene, herein designated TARGET GENE.

LOC340074 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340074, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340074 BINDING SITE, designated SEQ ID:15029, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48274] Another function of GAM5346 is therefore inhibition of LOC340074 (Accession XP_295148.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340074.

[48275] LOC340113 (Accession XP_295157.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC340113 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340113, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340113 BINDING SITE, designated SEQ ID:16181, to the nucleotide sequence of

GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48276] Another function of GAM5346 is therefore inhibition of LOC340113 (Accession XP_295157.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340113.

[48277] LOC343699 (Accession XP_293153.2) is another GAM5346 target gene, herein designated TARGET GENE. LOC343699 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC343699, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC343699 BINDING SITE, designated SEQ ID:11126, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48278] Another function of GAM5346 is therefore inhibition of LOC343699 (Accession XP_293153.2) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC343699.

[48279] LOC346178 (Accession XP_294100.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC346178 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC346178, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC346178 BINDING SITE, designated SEQ ID:11727, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48280] Another function of GAM5346 is therefore inhibition of LOC346178 (Accession XP_294100.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC346178.

[48281] LOC347926 (Accession XP_302628.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC347926 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC347926, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC347926 BINDING SITE, designated SEQ ID:17961, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48282] Another function of GAM5346 is therefore inhibition of LOC347926 (Accession XP_302628.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC347926.

[48283] LOC348174 (Accession XP_300648.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC348174 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348174, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348174 BINDING SITE, designated SEQ ID:1883, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48284] Another function of GAM5346 is therefore inhibition of LOC348174 (Accession XP_300648.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC348174.

[48285] LOC348798 (Accession XP_300845.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC348798 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348798, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348798 BINDING SITE, designated SEQ ID:10026, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48286] Another function of GAM5346 is therefore inhibition of LOC348798 (Accession XP_300845.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348798.

[48287] LOC349288 (Accession XP_300476.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC349288 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC349288, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349288 BINDING SITE, designated SEQ ID:6413, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48288] Another function of GAM5346 is therefore inhibition of LOC349288 (Accession XP_300476.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349288.

[48289] LOC93273 (Accession XP_050184.1) is another GAM5346 target gene, herein designated TARGET GENE. LOC93273 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC93273, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC93273 BINDING SITE, designated SEQ ID:4336, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48290] Another function of GAM5346 is therefore inhibition of LOC93273 (Accession XP_050184.1) . Accordingly, utili-

ties of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC93273.

[48291] MAGEC3 (Accession NP_803251.1) is another GAM5346 target gene, herein designated TARGET GENE. MAGEC3 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MAGEC3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAGEC3 BINDING SITE, designated SEQ ID:17747, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48292] Another function of GAM5346 is therefore inhibition of MAGEC3 (Accession NP_803251.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAGEC3.

[48293] Mitogen-activated protein kinase kinase kinase 7 interacting protein 2 (MAP3K7IP2, Accession NP_055908.1) is another GAM5346 target gene, herein designated TARGET GENE. MAP3K7IP2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts

of mRNA encoded by MAP3K7IP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAP3K7IP2 BINDING SITE, designated SEQ ID:1518, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48294] Another function of GAM5346 is therefore inhibition of Mitogen-activated protein kinase kinase kinase 7 interacting protein 2 (MAP3K7IP2, Accession NP_055908.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAP3K7IP2.

[48295] Mitogen-activated protein kinase kinase kinase 7 interacting protein 2 (MAP3K7IP2, Accession NP_663317.1) is another GAM5346 target gene, herein designated TARGET GENE. MAP3K7IP2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAP3K7IP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAP3K7IP2 BINDING SITE, designated SEQ ID:1518, to the nucleotide

sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48296] Another function of GAM5346 is therefore inhibition of Mitogen-activated protein kinase kinase kinase 7 interacting protein 2 (MAP3K7IP2, Accession NP_663317.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAP3K7IP2.

[48297] Mcm6 minichromosome maintenance deficient 6 (mis5 homolog, s. pombe) (s. cerevisiae) (MCM6, Accession NP_005906.2) is another GAM5346 target gene, herein designated TARGET GENE. MCM6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MCM6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MCM6 BINDING SITE, designated SEQ ID:7000, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48298] Another function of GAM5346 is therefore inhibition of Mcm6 minichromosome maintenance deficient 6 (mis5 homolog, s. pombe) (s. cerevisiae) (MCM6, Accession

NP_005906.2) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MCM6.

[48299] Methyl cpg binding protein 2 (rett syndrome) (MECP2, Accession NP_004983.1) is another GAM5346 target gene, herein designated TARGET GENE. MECP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MECP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MECP2 BINDING SITE, designated SEQ ID:17727, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48300] Another function of GAM5346 is therefore inhibition of Methyl cpg binding protein 2 (rett syndrome) (MECP2, Accession NP_004983.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MECP2.

[48301] MGC13198 (Accession NP_116079.1) is another GAM5346 target gene, herein designated TARGET GENE. MGC13198 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC13198, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC13198 BINDING SITE, designated SEQ ID:14308, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48302] Another function of GAM5346 is therefore inhibition of MGC13198 (Accession NP_116079.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC13198.

[48303] MGC16385 (Accession NP_659476.1) is another GAM5346 target gene, herein designated TARGET GENE. MGC16385 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC16385, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC16385 BINDING SITE, designated SEQ ID:14308, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48304] Another function of GAM5346 is therefore inhibition of MGC16385 (Accession NP_659476.1) . Accordingly, utili-

ties of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC16385.

[48305] MGC34761 (Accession NP_775890.1) is another GAM5346 target gene, herein designated TARGET GENE. MGC34761 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC34761, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC34761 BINDING SITE, designated SEQ ID:1883, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48306] Another function of GAM5346 is therefore inhibition of MGC34761 (Accession NP_775890.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC34761.

[48307] MGC45726 (Accession NP_689777.1) is another GAM5346 target gene, herein designated TARGET GENE. MGC45726 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC45726, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC45726 BINDING SITE, designated SEQ ID:10845, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48308] Another function of GAM5346 is therefore inhibition of MGC45726 (Accession NP_689777.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC45726.

[48309] MGC5528 (Accession NP_076999.1) is another GAM5346 target gene, herein designated TARGET GENE. MGC5528 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC5528, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC5528 BINDING SITE, designated SEQ ID:600, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48310] Another function of GAM5346 is therefore inhibition of MGC5528 (Accession NP_076999.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with MGC5528.

[48311] MI-ER1 (Accession NP_065999.1) is another GAM5346 target gene, herein designated TARGET GENE. MI-ER1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MI-ER1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MI-ER1 BINDING SITE, designated SEQ ID:3518, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48312] Another function of GAM5346 is therefore inhibition of MI-ER1 (Accession NP_065999.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MI-ER1.

[48313] Membrane metallo-endopeptidase (neutral endopeptidase, enkephalinase, calla, cd10) (MME, Accession NP_009219.1) is another GAM5346 target gene, herein designated TARGET GENE. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING

SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MME BINDING SITE, designated SEQ ID:4799, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48314] Another function of GAM5346 is therefore inhibition of Membrane metallo-endopeptidase (neutral endopeptidase, enkephalinase, calla, cd10) (MME, Accession NP_009219.1), a gene which is thermolysin- like specificity. and therefore is associated with Acute lymphocytic leukemia. Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of Acute lymphocytic leukemia, and of other diseases and clinical conditions associated with MME.

[48315] The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.Membrane metallo-endopeptidase (neutral endopeptidase, enkephalinase, calla, cd10) (MME, Accession NP_009220.1) is another GAM5346 target gene, herein designated TARGET GENE. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MME BINDING SITE, designated SEQ ID:4799, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48316] Another function of GAM5346 is therefore inhibition of Membrane metallo-endopeptidase (neutral endopeptidase, enkephalinase, calla, cd10) (MME, Accession NP_009220.1), a gene which is thermolysin- like specificity. and therefore is associated with Acute lymphocytic leukemia. Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of Acute lymphocytic leukemia, and of other diseases and clinical conditions associated with MME.

[48317] The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.Membrane metallo-endopeptidase (neutral endopeptidase, enkephalinase, calla, cd10) (MME, Accession NP_009218.1) is another GAM5346 target gene, herein designated TARGET GENE. MME BINDING SITE is a target binding site found in the 3` untranslated region of

multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MME BINDING SITE, designated SEQ ID:4799, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48318] Another function of GAM5346 is therefore inhibition of Membrane metallo-endopeptidase (neutral endopeptidase, enkephalinase, calla, cd10) (MME, Accession NP_009218.1), a gene which is thermolysin- like specificity. and therefore is associated with Acute lymphocytic leukemia. Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of Acute lymphocytic leukemia, and of other diseases and clinical conditions associated with MME.

[48319] The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.Membrane metallo-endopeptidase (neutral endopeptidase, enkephalinase, calla, cd10) (MME, Accession NP_000893.1) is another GAM5346 target gene, herein designated TARGET GENE. MME BINDING SITE is a

target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MME BINDING SITE, designated SEQ ID:4799, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48320] Another function of GAM5346 is therefore inhibition of Membrane metallo-endopeptidase (neutral endopeptidase, enkephalinase, calla, cd10) (MME, Accession NP_000893.1), a gene which is thermolysin- like specificity. and therefore is associated with Acute lymphocytic leukemia. Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of Acute lymphocytic leukemia, and of other diseases and clinical conditions associated with MME.

[48321] The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.Myogenic factor 5 (MYF5, Accession NP_005584.1) is another GAM5346 target gene, herein designated TARGET GENE. MYF5 BINDING SITE is a target

binding site found in the 3` untranslated region of mRNA encoded by MYF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MYF5 BINDING SITE, designated SEQ ID:4931, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48322] Another function of GAM5346 is therefore inhibition of Myogenic factor 5 (MYF5, Accession NP_005584.1), a gene which is involved in muscle differentiation and induces fibroblasts to differentiate into myoblasts. Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MYF5.

[48323] The function of MYF5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1906.1.Notch homolog 2 (drosophila) (NOTCH2, Accession NP_077719.2) is another GAM5346 target gene, herein designated TARGET GENE. NOTCH2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NOTCH2, corresponding to a target

binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NOTCH2 BINDING SITE, designated SEQ ID:5941, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48324] Another function of GAM5346 is therefore inhibition of Notch homolog 2 (drosophila) (NOTCH2, Accession NP_077719.2), a gene which is moderately similar to a region of murine Notch1 and contains an ankyrin repeat. Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NOTCH2.

[48325] The function of NOTCH2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.NSE1 (Accession NP_660158.1) is another GAM5346 target gene, herein designated TARGET GENE. NSE1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by NSE1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of NSE1 BINDING SITE, designated SEQ ID:7984, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48326] Another function of GAM5346 is therefore inhibition of NSE1 (Accession NP_660158.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NSE1.

[48327] NYD-SP14 (Accession NP_114162.1) is another GAM5346 target gene, herein designated TARGET GENE. NYD-SP14 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by NYD-SP14, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NYD-SP14 BINDING SITE, designated SEQ ID:17669, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48328] Another function of GAM5346 is therefore inhibition of NYD-SP14 (Accession NP_114162.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NYD-SP14.

[48329] Orthodenticle homolog 3 (drosophila) (OTX3, Accession NP_757379.1) is another GAM5346 target gene, herein designated TARGET GENE. OTX3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by OTX3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OTX3 BINDING SITE, designated SEQ ID:7260, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48330] Another function of GAM5346 is therefore inhibition of Orthodenticle homolog 3 (drosophila) (OTX3, Accession NP_757379.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OTX3.

[48331] Orthodenticle homolog 3 (drosophila) (OTX3, Accession NP_671725.1) is another GAM5346 target gene, herein designated TARGET GENE. OTX3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by OTX3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the

complementarity of the nucleotide sequences of OTX3 BINDING SITE, designated SEQ ID:7260, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48332] Another function of GAM5346 is therefore inhibition of Orthodenticle homolog 3 (drosophila) (OTX3, Accession NP_671725.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OTX3.

[48333] Pantothenate kinase 2 (hallervorden-spatz syndrome) (PANK2, Accession NP_705903.1) is another GAM5346 target gene, herein designated TARGET GENE. PANK2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PANK2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PANK2 BINDING SITE, designated SEQ ID:15989, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48334] Another function of GAM5346 is therefore inhibition of Pantothenate kinase 2 (hallervorden-spatz syndrome)

(PANK2, Accession NP_705903.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PANK2.

[48335] Proteasome (prosome, macropain) 26s subunit, non-atpase, 8 (PSMD8, Accession NP_002803.1) is another GAM5346 target gene, herein designated TARGET GENE. PSMD8 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PSMD8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PSMD8 BINDING SITE, designated SEQ ID:19154, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48336] Another function of GAM5346 is therefore inhibition of Proteasome (prosome, macropain) 26s subunit, non-atpase, 8 (PSMD8, Accession NP_002803.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PSMD8.

[48337] Polypyrimidine tract binding protein 1 (PTBP1, Accession NP_002810.1) is another GAM5346 target gene, herein designated TARGET GENE. PTBP1 BINDING SITE is a target

binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PTBP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTBP1 BINDING SITE, designated SEQ ID:18181, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48338] Another function of GAM5346 is therefore inhibition of Polypyrimidine tract binding protein 1 (PTBP1, Accession NP_002810.1), a gene which is required for pre- mRNA splicing, and acts via the protein degradation ubiquitin-proteasome pathway. Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTBP1.

[48339] The function of PTBP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.1.Polypyrimidine tract binding protein 1 (PTBP1, Accession NP_114367.1) is another GAM5346 target gene, herein designated TARGET GENE. PTBP1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by

PTBP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTBP1 BINDING SITE, designated SEQ ID:18181, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48340] Another function of GAM5346 is therefore inhibition of Polypyrimidine tract binding protein 1 (PTBP1, Accession NP_114367.1), a gene which is required for pre- mRNA splicing, and acts via the protein degradation ubiquitin-proteasome pathway. Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTBP1.

[48341] The function of PTBP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.1.Polypyrimidine tract binding protein 1 (PTBP1, Accession NP_114368.1) is another GAM5346 target gene, herein designated TARGET GENE. PTBP1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PTBP1, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTBP1 BINDING SITE, designated SEQ ID:18181, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48342] Another function of GAM5346 is therefore inhibition of Polypyrimidine tract binding protein 1 (PTBP1, Accession NP_114368.1), a gene which is required for pre- mRNA splicing, and acts via the protein degradation ubiquitin-proteasome pathway. Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTBP1.

[48343] The function of PTBP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.1.Polypyrimidine tract binding protein 1 (PTBP1, Accession NP_787041.1) is another GAM5346 target gene, herein designated TARGET GENE. PTBP1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PTBP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTBP1 BINDING SITE, designated SEQ ID:18181, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48344] Another function of GAM5346 is therefore inhibition of Polypyrimidine tract binding protein 1 (PTBP1, Accession NP_787041.1), a gene which is required for pre- mRNA splicing, and acts via the protein degradation ubiquitin-proteasome pathway. Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTBP1.

[48345] The function of PTBP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.1.Prostaglandin i2 (prostacyclin) synthase (PTGIS, Accession NP_000952.1) is another GAM5346 target gene, herein designated TARGET GENE. PTGIS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PTGIS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTGIS BIND-

ING SITE, designated SEQ ID:9392, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48346] Another function of GAM5346 is therefore inhibition of Prostaglandin i2 (prostacyclin) synthase (PTGIS, Accession NP_000952.1), a gene which catalyzes the isomerization of prostaglandin h2 to prostacyclin (= prostaglandin i2). Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTGIS.

[48347] The function of PTGIS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.SH3YL1 (Accession NP_056492.1) is another GAM5346 target gene, herein designated TARGET GENE. SH3YL1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SH3YL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SH3YL1 BINDING SITE, designated SEQ ID:16719, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48348] Another function of GAM5346 is therefore inhibition of SH3YL1 (Accession NP_056492.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SH3YL1.

[48349] Signal-regulatory protein beta 2 (SIRPB2, Accession NP_061026.1) is another GAM5346 target gene, herein designated TARGET GENE. SIRPB2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by SIRPB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SIRPB2 BINDING SITE, designated SEQ ID:17134, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48350] Another function of GAM5346 is therefore inhibition of Signal-regulatory protein beta 2 (SIRPB2, Accession NP_061026.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SIRPB2.

[48351] Signal-regulatory protein beta 2 (SIRPB2, Accession NP_543006.1) is another GAM5346 target gene, herein designated TARGET GENE. SIRPB2 BINDING SITE is a target

binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by SIRPB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SIRPB2 BINDING SITE, designated SEQ ID:17134, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48352] Another function of GAM5346 is therefore inhibition of Signal-regulatory protein beta 2 (SIRPB2, Accession NP_543006.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SIRPB2.

[48353] Telomeric repeat binding factor 2 (TERF2, Accession NP_005643.1) is another GAM5346 target gene, herein designated TARGET GENE. TERF2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TERF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TERF2 BINDING SITE, designated SEQ ID:2418, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ

ID:319.

[48354] Another function of GAM5346 is therefore inhibition of Telomeric repeat binding factor 2 (TERF2, Accession NP_005643.1), a gene which plays a key role in the protective activity of telomeres. Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TERF2.

[48355] The function of TERF2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM133.2.TRAD (Accession NP_008995.1) is another GAM5346 target gene, herein designated TARGET GENE. TRAD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRAD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRAD BINDING SITE, designated SEQ ID:2049, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48356] Another function of GAM5346 is therefore inhibition of TRAD (Accession NP_008995.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with TRAD.

[48357] Ubiquitin specific protease 24 (USP24, Accession XP_165973.3) is another GAM5346 target gene, herein designated TARGET GENE. USP24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by USP24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of USP24 BINDING SITE, designated SEQ ID:17338, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48358] Another function of GAM5346 is therefore inhibition of Ubiquitin specific protease 24 (USP24, Accession XP_165973.3) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with USP24.

[48359] Zinc finger protein 254 (ZNF254, Accession NP_004867.1) is another GAM5346 target gene, herein designated TARGET GENE. ZNF254 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF254, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF254 BINDING SITE, designated SEQ ID:9378, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48360] Another function of GAM5346 is therefore inhibition of Zinc finger protein 254 (ZNF254, Accession NP_004867.1) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF254.

[48361] Zinc finger protein 255 (ZNF255, Accession NP_005765.1) is another GAM5346 target gene, herein designated TARGET GENE. ZNF255 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ZNF255, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF255 BINDING SITE, designated SEQ ID:2601, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48362] Another function of GAM5346 is therefore inhibition of Zinc finger protein 255 (ZNF255, Accession NP_005765.1)

. Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF255.

[48363] ZNF431 (Accession XP_086098.2) is another GAM5346 target gene, herein designated TARGET GENE. ZNF431 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF431, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF431 BINDING SITE, designated SEQ ID:9162, to the nucleotide sequence of GAM5346 RNA, herein designated GAM RNA, also designated SEQ ID:319.

[48364] Another function of GAM5346 is therefore inhibition of ZNF431 (Accession XP_086098.2) . Accordingly, utilities of GAM5346 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF431.

[48365]

[48366] Fig. 8 further provides a conceptual description of a novel bioinformatically detected of the present invention, referred to here as Genomic Address Messenger 5385 (GAM5385), which modulates expression of respective target genes thereof, the function and utility of which tar-

get genes is known in the art.

[48367] GAM5385 is a novel bioinformatically detected regulatory, non protein coding, micro RNA (miRNA) gene. The method by which GAM5385 was detected is described hereinabove with reference to Figs. 8-15.

[48368] GAM5385 gene, herein designated GAM GENE, and GAM5385 target gene, herein designated TARGET GENE, are human genes contained in the human genome.

[48369] GAM5385 gene encodes a GAM5385 precursor RNA, herein designated GAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, GAM5385 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of GAM5385 precursor RNA is designated SEQ ID:22, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:22 is located at position 35621433 relative to chromosome 3.

[48370] GAM5385 precursor RNA folds onto itself, forming GAM5385 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence

of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[48371] GAM5385 precursor RNA folds onto itself, forming GAM5385 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[48372] Nucleotide sequence of GAM5385 precursor RNA, designated SEQ-ID: 22, and a schematic representation of a predicted secondary folding of GAM5385 folded precursor RNA are further described with reference to Table 2, hereby incorporated by reference.

[48373] An enzyme complex designated DICER COMPLEX, `dices` the GAM5385 folded precursor RNA into GAM5385 RNA, herein designated GAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex

comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy Group: A) nucleotide sequence of GAM5385 RNA is designated SEQ ID:218, and is provided hereinbelow with references to the sequence listing part and Table 3, hereby incorporated by reference.

[48374] GAM5385 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM5385 target RNA, herein designated GAM TARGET RNA. GAM5385 target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[48375] GAM5385 RNA, herein designated GAM RNA, binds complementarily to one or more target binding sites located in untranslated regions of GAM5385 target RNA, herein designated GAM TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of GAM5385 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the target binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated

that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limiting GAM5385 RNA may have a different number of target binding sites in untranslated regions of a GAM5385 target RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3`UTR region, this is meant as an example only these target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[48376] The complementary binding of GAM5385 RNA, herein designated GAM RNA, to target binding sites on GAM5385 target RNA, herein designated GAM TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM5385 target RNA into GAM5385 target protein, herein designated GAM TARGET PROTEIN. GAM target protein is therefore outlined by a broken line.

[48377] It is appreciated that GAM5385 target gene, herein designated TARGET GENE, in fact represents a plurality of GAM5385 target genes. The mRNA of each one of this plurality of GAM5385 target genes comprises one or more target binding sites, each having a nucleotide sequence which is at least partly complementary to GAM5385 RNA, herein designated GAM RNA, and which when bound by

GAM5385 RNA causes inhibition of translation of respective one or more GAM5385 target proteins.

[48378] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 8 with specific reference to translational inhibition exerted by GAM5385 gene, herein designated GAM GENE, on one or more GAM5385 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., Perspective: Glimpses of a tiny RNA world, Science 294,779 (2001)).

[48379] It is appreciated that specific functions and accordingly utilities of GAM5385 correlate with, and may be deduced from, the identity of the target genes which GAM5385 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[48380]

[48381]

[48382] Actin binding lim protein 1 (ABLIM1, Accession NP_006710.2) is a GAM5385 target gene, herein designated TARGET GENE. ABLIM1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ABLIM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABLIM1 BINDING SITE, designated SEQ ID:16103, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48383] A function of GAM5385 is therefore inhibition of Actin binding lim protein 1 (ABLIM1, Accession NP_006710.2) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABLIM1.

[48384] Actin binding lim protein 1 (ABLIM1, Accession NP_006711.2) is another GAM5385 target gene, herein designated TARGET GENE. ABLIM1 BINDING SITE is a target binding site found in the 3` untranslated region of multi-

ple transcripts of mRNA encoded by ABLIM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABLIM1 BINDING SITE, designated SEQ ID:16103, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48385] Another function of GAM5385 is therefore inhibition of Actin binding lim protein 1 (ABLIM1, Accession NP_006711.2) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABLIM1.

[48386] Actin binding lim protein 1 (ABLIM1, Accession NP_002304.2) is another GAM5385 target gene, herein designated TARGET GENE. ABLIM1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ABLIM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABLIM1 BINDING SITE, designated SEQ ID:16103, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48387] Another function of GAM5385 is therefore inhibition of Actin binding lim protein 1 (ABLIM1, Accession NP_002304.2) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABLIM1.

[48388] Acetyl-coenzyme a acyltransferase 2 (mitochondrial 3-oxoacyl-coenzyme a thiolase) (ACAA2, Accession NP_006102.1) is another GAM5385 target gene, herein designated TARGET GENE. ACAA2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ACAA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ACAA2 BINDING SITE, designated SEQ ID:10451, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48389] Another function of GAM5385 is therefore inhibition of Acetyl-coenzyme a acyltransferase 2 (mitochondrial 3-oxoacyl-coenzyme a thiolase) (ACAA2, Accession NP_006102.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ACAA2.

[48390] AD-020 (Accession NP_064526.1) is another GAM5385 target gene, herein designated TARGET GENE. AD-020 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by AD-020, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AD-020 BINDING SITE, designated SEQ ID:16382, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48391] Another function of GAM5385 is therefore inhibition of AD-020 (Accession NP_064526.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AD-020.

[48392] Arachidonate 15-lipoxygenase, second type (ALOX15B, Accession NP_001132.1) is another GAM5385 target gene, herein designated TARGET GENE. ALOX15B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ALOX15B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ALOX15B

BINDING SITE, designated SEQ ID:5527, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48393] Another function of GAM5385 is therefore inhibition of Arachidonate 15-lipoxygenase, second type (ALOX15B, Accession NP_001132.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ALOX15B.

[48394] Ap1 gamma subunit binding protein 1 (AP1GBP1, Accession NP_542117.1) is another GAM5385 target gene, herein designated TARGET GENE. AP1GBP1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by AP1GBP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AP1GBP1 BINDING SITE, designated SEQ ID:14123, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48395] Another function of GAM5385 is therefore inhibition of Ap1 gamma subunit binding protein 1 (AP1GBP1, Accession NP_542117.1) . Accordingly, utilities of GAM5385 in-

clude diagnosis, prevention and treatment of diseases and clinical conditions associated with AP1GBP1.

[48396] Ap1 gamma subunit binding protein 1 (AP1GBP1, Accession NP_009178.2) is another GAM5385 target gene, herein designated TARGET GENE. AP1GBP1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by AP1GBP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AP1GBP1 BINDING SITE, designated SEQ ID:14123, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48397] Another function of GAM5385 is therefore inhibition of Ap1 gamma subunit binding protein 1 (AP1GBP1, Accession NP_009178.2) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AP1GBP1.

[48398] Ap1 gamma subunit binding protein 1 (AP1GBP1, Accession NP_542118.1) is another GAM5385 target gene, herein designated TARGET GENE. AP1GBP1 BINDING SITE is a target binding site found in the 3` untranslated re-

gion of multiple transcripts of mRNA encoded by AP1GBP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AP1GBP1 BINDING SITE, designated SEQ ID:14123, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48399] Another function of GAM5385 is therefore inhibition of Ap1 gamma subunit binding protein 1 (AP1GBP1, Accession NP_542118.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AP1GBP1.

[48400] Aprataxin (APTX, Accession NP_060162.1) is another GAM5385 target gene, herein designated TARGET GENE. APTX BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by APTX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APTX BINDING SITE, designated SEQ ID:9973, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ

ID:218.

[48401] Another function of GAM5385 is therefore inhibition of Aprataxin (APTX, Accession NP_060162.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APTX.

[48402] Aprataxin (APTX, Accession NP_778241.1) is another GAM5385 target gene, herein designated TARGET GENE. APTX BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by APTX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APTX BINDING SITE, designated SEQ ID:9973, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48403] Another function of GAM5385 is therefore inhibition of Aprataxin (APTX, Accession NP_778241.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APTX.

[48404] Ras homolog gene family, member e (ARHE, Accession

NP_005159.1) is another GAM5385 target gene, herein designated TARGET GENE. ARHE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARHE BINDING SITE, designated SEQ ID:5435, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48405] Another function of GAM5385 is therefore inhibition of Ras homolog gene family, member e (ARHE, Accession NP_005159.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARHE.

[48406] Rho guanine nucleotide exchange factor (gef) 4 (ARHGEF4, Accession NP_056135.2) is another GAM5385 target gene, herein designated TARGET GENE. ARHGEF4 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ARHGEF4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of ARHGEF4 BINDING SITE, designated SEQ ID:15522, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48407] Another function of GAM5385 is therefore inhibition of Rho guanine nucleotide exchange factor (gef) 4 (ARHGEF4, Accession NP_056135.2) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARHGEF4.

[48408] Rho guanine nucleotide exchange factor (gef) 4 (ARHGEF4, Accession NP_127462.1) is another GAM5385 target gene, herein designated TARGET GENE. ARHGEF4 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ARHGEF4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARHGEF4 BINDING SITE, designated SEQ ID:15522, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48409] Another function of GAM5385 is therefore inhibition of Rho guanine nucleotide exchange factor (gef) 4 (ARHGEF4,

Accession NP_127462.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARHGEF4.

[48410] ARL8 (Accession NP_848930.1) is another GAM5385 target gene, herein designated TARGET GENE. ARL8 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ARL8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARL8 BINDING SITE, designated SEQ ID:13890, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48411] Another function of GAM5385 is therefore inhibition of ARL8 (Accession NP_848930.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARL8.

[48412] ARL8 (Accession XP_167671.1) is another GAM5385 target gene, herein designated TARGET GENE. ARL8 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ARL8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4

illustrates the complementarity of the nucleotide sequences of ARL8 BINDING SITE, designated SEQ ID:13890, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48413] Another function of GAM5385 is therefore inhibition of ARL8 (Accession XP_167671.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARL8.

[48414] Attractin (ATRN, Accession NP_647537.1) is another GAM5385 target gene, herein designated TARGET GENE. ATRN BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ATRN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATRN BINDING SITE, designated SEQ ID:14810, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48415] Another function of GAM5385 is therefore inhibition of Attractin (ATRN, Accession NP_647537.1), a gene which is involved in the initial immune cell clustering during inflammatory response. Accordingly, utilities of GAM5385

include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATRN.

[48416] The function of ATRN and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.Barren homolog (drosophila) (BRRN1, Accession NP_056156.2) is another GAM5385 target gene, herein designated TARGET GENE. BRRN1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BRRN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BRRN1 BINDING SITE, designated SEQ ID:8848, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48417] Another function of GAM5385 is therefore inhibition of Barren homolog (drosophila) (BRRN1, Accession NP_056156.2) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BRRN1.

[48418] Chromosome 20 open reading frame 158 (C20orf158, Accession NP_689515.1) is another GAM5385 target gene,

herein designated TARGET GENE. C20orf158 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C20orf158, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf158 BINDING SITE, designated SEQ ID:1219, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48419] Another function of GAM5385 is therefore inhibition of Chromosome 20 open reading frame 158 (C20orf158, Accession NP_689515.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf158.

[48420] Chromosome 20 open reading frame 174 (C20orf174, Accession XP_066058.2) is another GAM5385 target gene, herein designated TARGET GENE. C20orf174 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C20orf174, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf174 BINDING SITE, designated SEQ ID:13482, to the nucleotide

sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48421] Another function of GAM5385 is therefore inhibition of Chromosome 20 open reading frame 174 (C20orf174, Accession XP_066058.2) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf174.

[48422] Chromosome 21 open reading frame 93 (C21orf93, Accession NP_660162.1) is another GAM5385 target gene, herein designated TARGET GENE. C21orf93 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C21orf93, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C21orf93 BINDING SITE, designated SEQ ID:4794, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48423] Another function of GAM5385 is therefore inhibition of Chromosome 21 open reading frame 93 (C21orf93, Accession NP_660162.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C21orf93.

[48424] Carcinoembryonic antigen-related cell adhesion molecule 8 (CEACAM8, Accession NP_001807.2) is another GAM5385 target gene, herein designated TARGET GENE. CEACAM8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CEACAM8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CEACAM8 BINDING SITE, designated SEQ ID:3579, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48425] Another function of GAM5385 is therefore inhibition of Carcinoembryonic antigen-related cell adhesion molecule 8 (CEACAM8, Accession NP_001807.2) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CEACAM8.

[48426] CG012 (Accession XP_096710.1) is another GAM5385 target gene, herein designated TARGET GENE. CG012 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CG012, corresponding to a target binding site such as BINDING SITE I, BINDING

SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CG012 BINDING SITE, designated SEQ ID:19634, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48427] Another function of GAM5385 is therefore inhibition of CG012 (Accession XP_096710.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CG012.

[48428] Cytokine inducible sh2-containing protein (CISH, Accession NP_659508.1) is another GAM5385 target gene, herein designated TARGET GENE. CISH BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CISH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CISH BINDING SITE, designated SEQ ID:2516, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48429] Another function of GAM5385 is therefore inhibition of Cytokine inducible sh2-containing protein (CISH, Accession NP_659508.1), a gene which intervenes in the nega-

tive regulation of cytokines. Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CISH.

[48430] The function of CISH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.Cytokine inducible sh2-containing protein (CISH, Accession NP_037456.4) is another GAM5385 target gene, herein designated TARGET GENE. CISH BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CISH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CISH BINDING SITE, designated SEQ ID:2516, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48431] Another function of GAM5385 is therefore inhibition of Cytokine inducible sh2-containing protein (CISH, Accession NP_037456.4), a gene which intervenes in the negative regulation of cytokines. Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CISH.

[48432] The function of CISH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.CLONE24945 (Accession NP_056498.1) is another GAM5385 target gene, herein designated TARGET GENE. CLONE24945 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CLONE24945, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLONE24945 BINDING SITE, designated SEQ ID:19577, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48433] Another function of GAM5385 is therefore inhibition of CLONE24945 (Accession NP_056498.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLONE24945.

[48434] Colony stimulating factor 1 (macrophage) (CSF1, Accession NP_757350.1) is another GAM5385 target gene, herein designated TARGET GENE. CSF1 BINDING SITE is a target binding site found in the 3` untranslated region of

multiple transcripts of mRNA encoded by CSF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CSF1 BINDING SITE, designated SEQ ID:13158, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48435] Another function of GAM5385 is therefore inhibition of Colony stimulating factor 1 (macrophage) (CSF1, Accession NP_757350.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CSF1.

[48436] Colony stimulating factor 1 (macrophage) (CSF1, Accession NP_000748.3) is another GAM5385 target gene, herein designated TARGET GENE. CSF1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CSF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CSF1 BINDING SITE, designated SEQ ID:13158, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48437] Another function of GAM5385 is therefore inhibition of Colony stimulating factor 1 (macrophage) (CSF1, Accession NP_000748.3) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CSF1.

[48438] D-aspartate oxidase (DDO, Accession NP_004023.1) is another GAM5385 target gene, herein designated TARGET GENE. DDO BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DDO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DDO BINDING SITE, designated SEQ ID:6520, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48439] Another function of GAM5385 is therefore inhibition of D-aspartate oxidase (DDO, Accession NP_004023.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DDO.

[48440] D-aspartate oxidase (DDO, Accession NP_003640.1) is another GAM5385 target gene, herein designated TARGET

GENE. DDO BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DDO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DDO BINDING SITE, designated SEQ ID:6520, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48441] Another function of GAM5385 is therefore inhibition of D-aspartate oxidase (DDO, Accession NP_003640.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DDO.

[48442] Disrupted in schizophrenia 1 (DISC1, Accession NP_061132.1) is another GAM5385 target gene, herein designated TARGET GENE. DISC1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DISC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DISC1 BINDING SITE, designated SEQ ID:8442, to the nucleotide sequence of GAM5385

RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48443] Another function of GAM5385 is therefore inhibition of Disrupted in schizophrenia 1 (DISC1, Accession NP_061132.1), a gene which has globular N- terminal domain(s) and a helical C- terminal domain. and therefore may be associated with Schizophrenia . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of Schizophrenia ., and of other diseases and clinical conditions associated with DISC1.

[48444] The function of DISC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM116.1.DKFZP564D166 (Accession NP_056438.1) is another GAM5385 target gene, herein designated TARGET GENE. DKFZP564D166 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by DKFZP564D166, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP564D166 BINDING SITE, designated SEQ ID:775, to the nucleotide sequence of GAM5385 RNA, herein designated

GAM RNA, also designated SEQ ID:218.

[48445] Another function of GAM5385 is therefore inhibition of DKFZP564D166 (Accession NP_056438.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP564D166.

[48446] DKFZP586A0522 (Accession NP_054752.1) is another GAM5385 target gene, herein designated TARGET GENE. DKFZP586A0522 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP586A0522, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP586A0522 BINDING SITE, designated SEQ ID:12685, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48447] Another function of GAM5385 is therefore inhibition of DKFZP586A0522 (Accession NP_054752.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP586A0522.

[48448] Dnaj (hsp40) homolog, subfamily c, member 5 (DNAJC5,

Accession XP_028966.2) is another GAM5385 target gene, herein designated TARGET GENE. DNAJC5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DNAJC5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DNAJC5 BINDING SITE, designated SEQ ID:5877, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48449] Another function of GAM5385 is therefore inhibition of Dnaj (hsp40) homolog, subfamily c, member 5 (DNAJC5, Accession XP_028966.2) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DNAJC5.

[48450] DOT1L (Accession NP_115871.1) is another GAM5385 target gene, herein designated TARGET GENE. DOT1L BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DOT1L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DOT1L BINDING SITE, designated SEQ ID:13923, to the nucleotide

sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48451] Another function of GAM5385 is therefore inhibition of DOT1L (Accession NP_115871.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DOT1L.

[48452] Dual specificity phosphatase 16 (DUSP16, Accession XP_039106.1) is another GAM5385 target gene, herein designated TARGET GENE. DUSP16 BINDING SITE1 and DUSP16 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DUSP16, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DUSP16 BINDING SITE1 and DUSP16 BINDING SITE2, designated SEQ ID:19356 and SEQ ID:10606 respectively, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48453] Another function of GAM5385 is therefore inhibition of Dual specificity phosphatase 16 (DUSP16, Accession XP_039106.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DUSP16.

[48454] Dual-specificity tyrosine-(y)-phosphorylation regulated kinase 2 (DYRK2, Accession NP_003574.1) is another GAM5385 target gene, herein designated TARGET GENE. DYRK2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DYRK2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DYRK2 BINDING SITE, designated SEQ ID:19011, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48455] Another function of GAM5385 is therefore inhibition of Dual-specificity tyrosine-(y)-phosphorylation regulated kinase 2 (DYRK2, Accession NP_003574.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DYRK2.

[48456] Dual-specificity tyrosine-(y)-phosphorylation regulated kinase 2 (DYRK2, Accession NP_006473.1) is another GAM5385 target gene, herein designated TARGET GENE. DYRK2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA

encoded by DYRK2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DYRK2 BINDING SITE, designated SEQ ID:19011, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48457] Another function of GAM5385 is therefore inhibition of Dual-specificity tyrosine-(y)-phosphorylation regulated kinase 2 (DYRK2, Accession NP_006473.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DYRK2.

[48458] Egf-like-domain, multiple 4 (EGFL4, Accession XP_290821.1) is another GAM5385 target gene, herein designated TARGET GENE. EGFL4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by EGFL4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EGFL4 BINDING SITE, designated SEQ ID:14183, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ

ID:218.

[48459] Another function of GAM5385 is therefore inhibition of Egf-like-domain, multiple 4 (EGFL4, Accession XP_290821.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EGFL4.

[48460] Erythrocyte membrane protein band 4.9 (dematin) (EPB49, Accession NP_001969.1) is another GAM5385 target gene, herein designated TARGET GENE. EPB49 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by EPB49, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EPB49 BINDING SITE, designated SEQ ID:11878, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48461] Another function of GAM5385 is therefore inhibition of Erythrocyte membrane protein band 4.9 (dematin) (EPB49, Accession NP_001969.1), a gene which is an actin-bundling protein. Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EPB49.

[48462] The function of EPB49 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.ERG-1 (Accession NP_071317.2) is another GAM5385 target gene, herein designated TARGET GENE. ERG-1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ERG-1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ERG-1 BINDING SITE, designated SEQ ID:13141, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48463] Another function of GAM5385 is therefore inhibition of ERG-1 (Accession NP_071317.2) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ERG-1.

[48464] Fibulin 1 (FBLN1, Accession NP_006478.1) is another GAM5385 target gene, herein designated TARGET GENE. FBLN1 BINDING SITE1 and FBLN1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by FBLN1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE

II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FBLN1 BINDING SITE1 and FBLN1 BINDING SITE2, designated SEQ ID:12051 and SEQ ID:16278 respectively, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48465] Another function of GAM5385 is therefore inhibition of Fibulin 1 (FBLN1, Accession NP_006478.1), a gene which secreted glycoprotein; has EGF- like repeats, similar to anaphylatoxins C3a, C4a, and C5a. Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FBLN1.

[48466] The function of FBLN1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM179.1.Fc fragment of igg, high affinity ia, receptor for (cd64) (FCGR1A, Accession NP_000557.1) is another GAM5385 target gene, herein designated TARGET GENE. FCGR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FCGR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide se-

quences of FCGR1A BINDING SITE, designated SEQ ID:11092, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48467] Another function of GAM5385 is therefore inhibition of Fc fragment of igg, high affinity ia, receptor for (cd64) (FCGR1A, Accession NP_000557.1), a gene which binds to the fc region of immunoglobulins gamma. high affinity receptor. and therefore may be associated with Igg receptor i, phagocytic, familial deficiency of. Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of Igg receptor i, phagocytic, familial deficiency of, and of other diseases and clinical conditions associated with FCGR1A.

[48468] The function of FCGR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM206.1.Fibroblast growth factor receptor 1 (fms-related tyrosine kinase 2, pfeiffer syndrome) (FGFR1, Accession NP_075599.1) is another GAM5385 target gene, herein designated TARGET GENE. FGFR1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by FGFR1, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGFR1 BINDING SITE, designated SEQ ID:4651, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48469] Another function of GAM5385 is therefore inhibition of Fibroblast growth factor receptor 1 (fms-related tyrosine kinase 2, pfeiffer syndrome) (FGFR1, Accession NP_075599.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGFR1.

[48470] Fibroblast growth factor receptor 1 (fms-related tyrosine kinase 2, pfeiffer syndrome) (FGFR1, Accession NP_075596.1) is another GAM5385 target gene, herein designated TARGET GENE. FGFR1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by FGFR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGFR1 BINDING SITE, designated SEQ ID:4651, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48471] Another function of GAM5385 is therefore inhibition of Fibroblast growth factor receptor 1 (fms-related tyrosine kinase 2, pfeiffer syndrome) (FGFR1, Accession NP_075596.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGFR1.

[48472] Fibroblast growth factor receptor 1 (fms-related tyrosine kinase 2, pfeiffer syndrome) (FGFR1, Accession NP_075593.1) is another GAM5385 target gene, herein designated TARGET GENE. FGFR1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by FGFR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGFR1 BINDING SITE, designated SEQ ID:4651, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48473] Another function of GAM5385 is therefore inhibition of Fibroblast growth factor receptor 1 (fms-related tyrosine kinase 2, pfeiffer syndrome) (FGFR1, Accession NP_075593.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with FGFR1.

[48474] Fibroblast growth factor receptor 1 (fms-related tyrosine kinase 2, pfeiffer syndrome) (FGFR1, Accession NP_075595.1) is another GAM5385 target gene, herein designated TARGET GENE. FGFR1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by FGFR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGFR1 BINDING SITE, designated SEQ ID:4651, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48475] Another function of GAM5385 is therefore inhibition of Fibroblast growth factor receptor 1 (fms-related tyrosine kinase 2, pfeiffer syndrome) (FGFR1, Accession NP_075595.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGFR1.

[48476] Fibroblast growth factor receptor 1 (fms-related tyrosine kinase 2, pfeiffer syndrome) (FGFR1, Accession NP_000595.1) is another GAM5385 target gene, herein designated TARGET GENE. FGFR1 BINDING SITE is a target

binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by FGFR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGFR1 BINDING SITE, designated SEQ ID:4651, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48477] Another function of GAM5385 is therefore inhibition of Fibroblast growth factor receptor 1 (fms-related tyrosine kinase 2, pfeiffer syndrome) (FGFR1, Accession NP_000595.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGFR1.

[48478] Fibroblast growth factor receptor 1 (fms-related tyrosine kinase 2, pfeiffer syndrome) (FGFR1, Accession NP_056934.2) is another GAM5385 target gene, herein designated TARGET GENE. FGFR1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by FGFR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGFR1

BINDING SITE, designated SEQ ID:4651, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48479] Another function of GAM5385 is therefore inhibition of Fibroblast growth factor receptor 1 (fms-related tyrosine kinase 2, pfeiffer syndrome) (FGFR1, Accession NP_056934.2) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGFR1.

[48480] Fibroblast growth factor receptor 1 (fms-related tyrosine kinase 2, pfeiffer syndrome) (FGFR1, Accession NP_075594.1) is another GAM5385 target gene, herein designated TARGET GENE. FGFR1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by FGFR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGFR1 BINDING SITE, designated SEQ ID:4651, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48481] Another function of GAM5385 is therefore inhibition of Fibroblast growth factor receptor 1 (fms-related tyrosine

kinase 2, pfeiffer syndrome) (FGFR1, Accession NP_075594.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGFR1.

[48482] Fibroblast growth factor receptor 1 (fms-related tyrosine kinase 2, pfeiffer syndrome) (FGFR1, Accession NP_075598.1) is another GAM5385 target gene, herein designated TARGET GENE. FGFR1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by FGFR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGFR1 BINDING SITE, designated SEQ ID:4651, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48483] Another function of GAM5385 is therefore inhibition of Fibroblast growth factor receptor 1 (fms-related tyrosine kinase 2, pfeiffer syndrome) (FGFR1, Accession NP_075598.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGFR1.

[48484] Fibroblast growth factor receptor 1 (fms-related tyrosine

kinase 2, pfeiffer syndrome) (FGFR1, Accession NP_075597.1) is another GAM5385 target gene, herein designated TARGET GENE. FGFR1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by FGFR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGFR1 BINDING SITE, designated SEQ ID:4651, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48485] Another function of GAM5385 is therefore inhibition of Fibroblast growth factor receptor 1 (fms-related tyrosine kinase 2, pfeiffer syndrome) (FGFR1, Accession NP_075597.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGFR1.

[48486] FLJ10420 (Accession NP_060560.1) is another GAM5385 target gene, herein designated TARGET GENE. FLJ10420 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10420, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ10420 BINDING SITE, designated SEQ ID:14824, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48487] Another function of GAM5385 is therefore inhibition of FLJ10420 (Accession NP_060560.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10420.

[48488] FLJ10706 (Accession NP_060656.1) is another GAM5385 target gene, herein designated TARGET GENE. FLJ10706 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ10706, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10706 BINDING SITE, designated SEQ ID:11748, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48489] Another function of GAM5385 is therefore inhibition of FLJ10706 (Accession NP_060656.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ10706.

[48490] FLJ10916 (Accession NP_060741.1) is another GAM5385 target gene, herein designated TARGET GENE. FLJ10916 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ10916, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10916 BINDING SITE, designated SEQ ID:13403, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48491] Another function of GAM5385 is therefore inhibition of FLJ10916 (Accession NP_060741.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10916.

[48492] FLJ11800 (Accession NP_079250.1) is another GAM5385 target gene, herein designated TARGET GENE. FLJ11800 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ11800, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ11800 BINDING SITE, designated SEQ ID:1416, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48493] Another function of GAM5385 is therefore inhibition of FLJ11800 (Accession NP_079250.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11800.

[48494] FLJ20184 (Accession NP_060170.1) is another GAM5385 target gene, herein designated TARGET GENE. FLJ20184 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20184, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20184 BINDING SITE, designated SEQ ID:17813, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48495] Another function of GAM5385 is therefore inhibition of FLJ20184 (Accession NP_060170.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20184.

[48496] FLJ20464 (Accession NP_060304.1) is another GAM5385 target gene, herein designated TARGET GENE. FLJ20464 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20464, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20464 BINDING SITE, designated SEQ ID:17685, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48497] Another function of GAM5385 is therefore inhibition of FLJ20464 (Accession NP_060304.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20464.

[48498] FLJ22494 (Accession NP_079091.1) is another GAM5385 target gene, herein designated TARGET GENE. FLJ22494 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ22494, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22494 BINDING SITE, designated SEQ ID:4622, to the

nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48499] Another function of GAM5385 is therefore inhibition of FLJ22494 (Accession NP_079091.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22494.

[48500] FLJ32112 (Accession NP_694580.1) is another GAM5385 target gene, herein designated TARGET GENE. FLJ32112 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32112, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32112 BINDING SITE, designated SEQ ID:10311, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48501] Another function of GAM5385 is therefore inhibition of FLJ32112 (Accession NP_694580.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32112.

[48502] FLJ32115 (Accession NP_689534.1) is another GAM5385

target gene, herein designated TARGET GENE. FLJ32115 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32115, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32115 BINDING SITE, designated SEQ ID:6946, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48503] Another function of GAM5385 is therefore inhibition of FLJ32115 (Accession NP_689534.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32115.

[48504] Ftsj homolog 2 (e. coli) (FTSJ2, Accession NP_803191.1) is another GAM5385 target gene, herein designated TARGET GENE. FTSJ2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FTSJ2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FTSJ2 BINDING SITE, designated SEQ ID:3879, to the nucleotide sequence of

GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48505] Another function of GAM5385 is therefore inhibition of Ftsj homolog 2 (e. coli) (FTSJ2, Accession NP_803191.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FTSJ2.

[48506] G2 (Accession XP_039515.8) is another GAM5385 target gene, herein designated TARGET GENE. G2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by G2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of G2 BINDING SITE, designated SEQ ID:15665, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48507] Another function of GAM5385 is therefore inhibition of G2 (Accession XP_039515.8) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with G2.

[48508] Glutamic pyruvate transaminase (alanine aminotransferase) 2 (GPT2, Accession NP_597700.1) is another

GAM5385 target gene, herein designated TARGET GENE. GPT2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GPT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPT2 BINDING SITE, designated SEQ ID:12001, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48509] Another function of GAM5385 is therefore inhibition of Glutamic pyruvate transaminase (alanine aminotransferase) 2 (GPT2, Accession NP_597700.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPT2.

[48510] Glyoxylate reductase/hydroxypyruvate reductase (GRHPR, Accession NP_036335.1) is another GAM5385 target gene, herein designated TARGET GENE. GRHPR BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by GRHPR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GRHPR BINDING

SITE, designated SEQ ID:3593, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48511] Another function of GAM5385 is therefore inhibition of Glyoxylate reductase/hydroxypyruvate reductase (GRHPR, Accession NP_036335.1), a gene which has widespread tissue expression and has a role in metabolism. Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GRHPR.

[48512] The function of GRHPR has been established by previous studies. Cramer et al. (1999) and Rumsby and Cregeen (1999) independently identified a glyoxylate reductase/ hydroxypyruvate reductase (GRHPR; EC 1.1.1.79) cDNA clone from a human liver EST library. The GRHPR gene encodes a predicted 328- amino acid protein with a mass of 35,563 Da. By transient transfection of the cDNA clone into COS cells, Cramer et al. (1999) verified that GRHPR encodes an enzyme with hydroxypyruvate reductase, glyoxylate reductase, and D- glycerate dehydrogenase enzymatic activities. Database analysis of human ESTs revealed widespread tissue expression, indicating that the enzyme may have a role in metabolism. Cramer et al. (1999) de-

termined that the human GRHPR gene spans approximately 9 kb and is composed of 9 exons and 8 introns. In 2 pairs of sibs from 2 unrelated families with type II hyperoxaluria (OMIM Ref. No. 260000), Cramer et al. (1999) identified a 1- bp deletion in the GRHPR gene (103delG; 604296.0001) by SSCP analysis. All 4 patients were homozygous for the same mutation. Webster et al. (2000) identified 5 other mutations in patients with type II hyperoxaluria. Ten of 11 patients that they had genotyped were homozygous for 1 of the 6 known mutations. In the case of two- thirds of the patients, the parents were related. Genotyping also showed the possible presence of a founder effect for the 2 most common mutations: 103delG and arg99 to ter (604296.0002).

[48513]

[48514] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[48515] Cramer, S. D.; Ferree, P. M.; Lin, K.; Milliner, D. S.; Holmes, R. P. : The gene encoding hydroxypyruvate reductase (GRHPR) is mutated in patients with primary hyperoxaluria type II. Hum. Molec. Genet. 8: 2063- 2069, 1999. ; and

[48516] Webster, K. E.; Ferree, P. M.; Holmes, R. P.; Cramer, S. D. :

Identification of missense, nonsense, and deletion mutations in the GRHPR gene in patients with primary hyperoxaluria type.

[48517] Further studies establishing the function and utilities of GRHPR are found in John Hopkins OMIM database record ID 604296, and in cited publications listed in Table 5, which are hereby incorporated by reference.Glutamate receptor, ionotropic, delta 1 (GRID1, Accession XP_043613.8) is another GAM5385 target gene, herein designated TARGET GENE. GRID1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GRID1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GRID1 BINDING SITE, designated SEQ ID:9369, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48518] Another function of GAM5385 is therefore inhibition of Glutamate receptor, ionotropic, delta 1 (GRID1, Accession XP_043613.8) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GRID1.

[48519] H-plk (Accession NP_056936.1) is another GAM5385 target gene, herein designated TARGET GENE. H-plk BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by H-plk, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of H-plk BINDING SITE, designated SEQ ID:8719, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48520] Another function of GAM5385 is therefore inhibition of H-plk (Accession NP_056936.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with H-plk.

[48521] HGC6.2 (Accession NP_055171.1) is another GAM5385 target gene, herein designated TARGET GENE. HGC6.2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HGC6.2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HGC6.2 BINDING SITE, designated SEQ ID:11193, to the nucleotide sequence of GAM5385 RNA, herein designated

GAM RNA, also designated SEQ ID:218.

[48522] Another function of GAM5385 is therefore inhibition of HGC6.2 (Accession NP_055171.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HGC6.2.

[48523] Hla-g histocompatibility antigen, class i, g (HLA-G, Accession NP_002118.1) is another GAM5385 target gene, herein designated TARGET GENE. HLA-G BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HLA-G, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HLA-G BINDING SITE, designated SEQ ID:17163, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48524] Another function of GAM5385 is therefore inhibition of Hla-g histocompatibility antigen, class i, g (HLA-G, Accession NP_002118.1), a gene which involved in the presentation of foreign antigens to the immune system. Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associ-

ated with HLA-G.

[48525] The function of HLA-G and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM504.1.Interferon regulatory factor 4 (IRF4, Accession NP_002451.1) is another GAM5385 target gene, herein designated TARGET GENE. IRF4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IRF4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IRF4 BINDING SITE, designated SEQ ID:2090, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48526] Another function of GAM5385 is therefore inhibition of Interferon regulatory factor 4 (IRF4, Accession NP_002451.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IRF4.

[48527] Integrin, alpha l (antigen cd11a (p180), lymphocyte function-associated antigen 1; alpha polypeptide) (ITGAL, Accession NP_002200.1) is another GAM5385 target gene,

herein designated TARGET GENE. ITGAL BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ITGAL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ITGAL BINDING SITE, designated SEQ ID:16142, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48528] Another function of GAM5385 is therefore inhibition of Integrin, alpha l (antigen cd11a (p180), lymphocyte function-associated antigen 1; alpha polypeptide) (ITGAL, Accession NP_002200.1), a gene which s a receptor for icam1, icam2, icam3 and icam4. it is involved in a variety of immune phenomena including leukocyte- endothelial cell interaction, cytotoxic t- cell mediated killing, and antibody dependent killing by granulocytes and monocytes. Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ITGAL.

[48529] The function of ITGAL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM148.1.KIAA0317 (Accession NP_055636.1) is another GAM5385 target gene, herein designated TARGET GENE. KIAA0317 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0317, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0317 BINDING SITE, designated SEQ ID:14991, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48530] Another function of GAM5385 is therefore inhibition of KIAA0317 (Accession NP_055636.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0317.

[48531] KIAA0352 (Accession NP_055645.1) is another GAM5385 target gene, herein designated TARGET GENE. KIAA0352 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0352, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

KIAA0352 BINDING SITE, designated SEQ ID:18577, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48532] Another function of GAM5385 is therefore inhibition of KIAA0352 (Accession NP_055645.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0352.

[48533] KIAA0514 (Accession NP_055511.1) is another GAM5385 target gene, herein designated TARGET GENE. KIAA0514 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0514, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0514 BINDING SITE, designated SEQ ID:1534, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48534] Another function of GAM5385 is therefore inhibition of KIAA0514 (Accession NP_055511.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0514.

[48535] KIAA0721 (Accession NP_067680.2) is another GAM5385 target gene, herein designated TARGET GENE. KIAA0721 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0721, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0721 BINDING SITE, designated SEQ ID:4456, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48536] Another function of GAM5385 is therefore inhibition of KIAA0721 (Accession NP_067680.2) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0721.

[48537] KIAA0876 (Accession XP_290852.1) is another GAM5385 target gene, herein designated TARGET GENE. KIAA0876 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0876, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0876 BINDING SITE, designated SEQ ID:10335, to the

nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48538] Another function of GAM5385 is therefore inhibition of KIAA0876 (Accession XP_290852.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0876.

[48539] KIAA0972 (Accession NP_055745.1) is another GAM5385 target gene, herein designated TARGET GENE. KIAA0972 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0972, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0972 BINDING SITE, designated SEQ ID:10280, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48540] Another function of GAM5385 is therefore inhibition of KIAA0972 (Accession NP_055745.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0972.

[48541] KIAA1754 (Accession NP_203755.1) is another GAM5385

target gene, herein designated TARGET GENE. KIAA1754 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1754, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1754 BINDING SITE, designated SEQ ID:14851, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48542] Another function of GAM5385 is therefore inhibition of KIAA1754 (Accession NP_203755.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1754.

[48543] KIAA1904 (Accession XP_056282.1) is another GAM5385 target gene, herein designated TARGET GENE. KIAA1904 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1904, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1904 BINDING SITE, designated SEQ ID:19375, to the nucleotide sequence of GAM5385 RNA, herein designated

GAM RNA, also designated SEQ ID:218.

[48544] Another function of GAM5385 is therefore inhibition of KIAA1904 (Accession XP_056282.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1904.

[48545] KIDINS220 (Accession XP_291015.1) is another GAM5385 target gene, herein designated TARGET GENE. KIDINS220 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIDINS220, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIDINS220 BINDING SITE, designated SEQ ID:2942, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48546] Another function of GAM5385 is therefore inhibition of KIDINS220 (Accession XP_291015.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIDINS220.

[48547] Lectin, galactoside-binding, soluble, 3 (galectin 3) (LGALS3, Accession NP_002297.1) is another GAM5385

target gene, herein designated TARGET GENE. LGALS3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LGALS3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LGALS3 BINDING SITE, designated SEQ ID:506, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48548] Another function of GAM5385 is therefore inhibition of Lectin, galactoside-binding, soluble, 3 (galectin 3) (LGALS3, Accession NP_002297.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LGALS3.

[48549] Lim domain only 4 (LMO4, Accession NP_006760.1) is another GAM5385 target gene, herein designated TARGET GENE. LMO4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LMO4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LMO4 BINDING SITE, designated SEQ ID:3198,

to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48550] Another function of GAM5385 is therefore inhibition of Lim domain only 4 (LMO4, Accession NP_006760.1), a gene which promotes myogenic differentiation. Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LMO4.

[48551] The function of LMO4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM467.2.LOC113612 (Accession XP_054492.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC113612 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC113612, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC113612 BINDING SITE, designated SEQ ID:821, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48552] Another function of GAM5385 is therefore inhibition of

LOC113612 (Accession XP_054492.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC113612.

[48553] LOC126917 (Accession XP_059091.2) is another GAM5385 target gene, herein designated TARGET GENE. LOC126917 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC126917, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC126917 BINDING SITE, designated SEQ ID:2569, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48554] Another function of GAM5385 is therefore inhibition of LOC126917 (Accession XP_059091.2) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC126917.

[48555] LOC127262 (Accession XP_072073.5) is another GAM5385 target gene, herein designated TARGET GENE. LOC127262 BINDING SITE is a target binding site found in

the 3` untranslated region of mRNA encoded by LOC127262, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC127262 BINDING SITE, designated SEQ ID:14394, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48556] Another function of GAM5385 is therefore inhibition of LOC127262 (Accession XP_072073.5) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC127262.

[48557] LOC128239 (Accession XP_059223.4) is another GAM5385 target gene, herein designated TARGET GENE. LOC128239 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC128239, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC128239 BINDING SITE, designated SEQ ID:1443, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:218.

[48558] Another function of GAM5385 is therefore inhibition of LOC128239 (Accession XP_059223.4) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC128239.

[48559] LOC130633 (Accession XP_059463.2) is another GAM5385 target gene, herein designated TARGET GENE. LOC130633 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC130633, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC130633 BINDING SITE, designated SEQ ID:17789, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48560] Another function of GAM5385 is therefore inhibition of LOC130633 (Accession XP_059463.2) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC130633.

[48561] LOC135521 (Accession XP_059776.1) is another

GAM5385 target gene, herein designated TARGET GENE. LOC135521 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC135521, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC135521 BINDING SITE, designated SEQ ID:18796, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48562] Another function of GAM5385 is therefore inhibition of LOC135521 (Accession XP_059776.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC135521.

[48563] LOC143381 (Accession XP_084501.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC143381 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC143381, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC143381 BINDING SITE, desig-

nated SEQ ID:9647, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48564] Another function of GAM5385 is therefore inhibition of LOC143381 (Accession XP_084501.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC143381.

[48565] LOC144467 (Accession NP_612482.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC144467 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC144467, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144467 BINDING SITE, designated SEQ ID:16762, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48566] Another function of GAM5385 is therefore inhibition of LOC144467 (Accession NP_612482.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC144467.

[48567] LOC144678 (Accession XP_096656.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC144678 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC144678, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144678 BINDING SITE, designated SEQ ID:18404, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48568] Another function of GAM5385 is therefore inhibition of LOC144678 (Accession XP_096656.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144678.

[48569] LOC145980 (Accession XP_096914.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC145980 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC145980, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145980 BINDING SITE, designated SEQ ID:16415, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48570] Another function of GAM5385 is therefore inhibition of LOC145980 (Accession XP_096914.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145980.

[48571] LOC147808 (Accession XP_097313.2) is another GAM5385 target gene, herein designated TARGET GENE. LOC147808 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC147808, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147808 BINDING SITE, designated SEQ ID:8092, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48572] Another function of GAM5385 is therefore inhibition of LOC147808 (Accession XP_097313.2) . Accordingly, utili-

ties of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147808.

[48573] LOC148418 (Accession XP_086188.6) is another GAM5385 target gene, herein designated TARGET GENE. LOC148418 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC148418, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC148418 BINDING SITE, designated SEQ ID:14739, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48574] Another function of GAM5385 is therefore inhibition of LOC148418 (Accession XP_086188.6) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148418.

[48575] LOC148823 (Accession NP_660321.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC148823 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by

LOC148823, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC148823 BINDING SITE, designated SEQ ID:7024, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48576] Another function of GAM5385 is therefore inhibition of LOC148823 (Accession NP_660321.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148823.

[48577] LOC150527 (Accession XP_086942.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC150527 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC150527, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150527 BINDING SITE, designated SEQ ID:2809, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48578] Another function of GAM5385 is therefore inhibition of LOC150527 (Accession XP_086942.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150527.

[48579] LOC152790 (Accession XP_098264.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC152790 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC152790, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152790 BINDING SITE, designated SEQ ID:6839, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48580] Another function of GAM5385 is therefore inhibition of LOC152790 (Accession XP_098264.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152790.

[48581] LOC153146 (Accession XP_098319.1) is another GAM5385 target gene, herein designated TARGET GENE.

LOC153146 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC153146, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC153146 BINDING SITE, designated SEQ ID:7502, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48582] Another function of GAM5385 is therefore inhibition of LOC153146 (Accession XP_098319.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153146.

[48583] LOC158381 (Accession XP_048461.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC158381 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC158381, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158381 BINDING SITE, designated SEQ ID:5669, to the nucleotide sequence of

GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48584] Another function of GAM5385 is therefore inhibition of LOC158381 (Accession XP_048461.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158381.

[48585] LOC200169 (Accession XP_211599.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC200169 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by LOC200169, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC200169 BINDING SITE, designated SEQ ID:5297, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48586] Another function of GAM5385 is therefore inhibition of LOC200169 (Accession XP_211599.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC200169.

[48587] LOC202551 (Accession XP_011448.4) is another GAM5385 target gene, herein designated TARGET GENE. LOC202551 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC202551, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC202551 BINDING SITE, designated SEQ ID:16316, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48588] Another function of GAM5385 is therefore inhibition of LOC202551 (Accession XP_011448.4) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC202551.

[48589] LOC203249 (Accession XP_116805.2) is another GAM5385 target gene, herein designated TARGET GENE. LOC203249 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC203249, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC203249 BINDING SITE, designated SEQ ID:6033, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48590] Another function of GAM5385 is therefore inhibition of LOC203249 (Accession XP_116805.2) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC203249.

[48591] LOC219690 (Accession XP_167572.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC219690 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC219690, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC219690 BINDING SITE, designated SEQ ID:14755, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48592] Another function of GAM5385 is therefore inhibition of LOC219690 (Accession XP_167572.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC219690.

[48593] LOC255870 (Accession XP_170628.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC255870 BINDING SITE1 and LOC255870 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC255870, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC255870 BINDING SITE1 and LOC255870 BINDING SITE2, designated SEQ ID:17784 and SEQ ID:8949 respectively, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48594] Another function of GAM5385 is therefore inhibition of LOC255870 (Accession XP_170628.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255870.

[48595] LOC283167 (Accession XP_210921.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC283167 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

LOC283167, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283167 BINDING SITE, designated SEQ ID:6144, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48596] Another function of GAM5385 is therefore inhibition of LOC283167 (Accession XP_210921.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283167.

[48597] LOC283293 (Accession XP_210962.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC283293 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283293, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283293 BINDING SITE, designated SEQ ID:4599, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48598] Another function of GAM5385 is therefore inhibition of LOC283293 (Accession XP_210962.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283293.

[48599] LOC283465 (Accession XP_208686.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC283465 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283465, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283465 BINDING SITE, designated SEQ ID:1830, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48600] Another function of GAM5385 is therefore inhibition of LOC283465 (Accession XP_208686.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283465.

[48601] LOC283484 (Accession XP_211053.1) is another GAM5385 target gene, herein designated TARGET GENE.

LOC283484 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283484, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283484 BINDING SITE, designated SEQ ID:3455, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48602] Another function of GAM5385 is therefore inhibition of LOC283484 (Accession XP_211053.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283484.

[48603] LOC283661 (Accession XP_208102.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC283661 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283661, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283661 BINDING SITE, designated SEQ ID:1336, to the nucleotide sequence of

GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48604] Another function of GAM5385 is therefore inhibition of LOC283661 (Accession XP_208102.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283661.

[48605] LOC284048 (Accession XP_208152.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC284048 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284048, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284048 BINDING SITE, designated SEQ ID:1416, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48606] Another function of GAM5385 is therefore inhibition of LOC284048 (Accession XP_208152.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284048.

[48607] LOC284101 (Accession XP_209019.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC284101 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284101, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284101 BINDING SITE, designated SEQ ID:6084, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48608] Another function of GAM5385 is therefore inhibition of LOC284101 (Accession XP_209019.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284101.

[48609] LOC284158 (Accession XP_209041.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC284158 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284158, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC284158 BINDING SITE, designated SEQ ID:17928, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48610] Another function of GAM5385 is therefore inhibition of LOC284158 (Accession XP_209041.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284158.

[48611] LOC284263 (Accession XP_211400.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC284263 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284263, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284263 BINDING SITE, designated SEQ ID:10396, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48612] Another function of GAM5385 is therefore inhibition of LOC284263 (Accession XP_211400.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC284263.

[48613] LOC284555 (Accession XP_211518.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC284555 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284555, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284555 BINDING SITE, designated SEQ ID:5552, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48614] Another function of GAM5385 is therefore inhibition of LOC284555 (Accession XP_211518.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284555.

[48615] LOC284737 (Accession XP_211612.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC284737 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284737, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284737 BINDING SITE, designated SEQ ID:6441, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48616] Another function of GAM5385 is therefore inhibition of LOC284737 (Accession XP_211612.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284737.

[48617] LOC284759 (Accession XP_209363.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC284759 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284759, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284759 BINDING SITE, designated SEQ ID:10735, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48618] Another function of GAM5385 is therefore inhibition of

LOC284759 (Accession XP_209363.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284759.

[48619] LOC284898 (Accession XP_211685.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC284898 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284898, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284898 BINDING SITE, designated SEQ ID:13073, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48620] Another function of GAM5385 is therefore inhibition of LOC284898 (Accession XP_211685.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284898.

[48621] LOC338825 (Accession XP_294723.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC338825 BINDING SITE is a target binding site found in

the 5` untranslated region of mRNA encoded by LOC338825, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338825 BINDING SITE, designated SEQ ID:12400, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48622] Another function of GAM5385 is therefore inhibition of LOC338825 (Accession XP_294723.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338825.

[48623] LOC339216 (Accession XP_290762.2) is another GAM5385 target gene, herein designated TARGET GENE. LOC339216 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339216, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339216 BINDING SITE, designated SEQ ID:6084, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:218.

[48624] Another function of GAM5385 is therefore inhibition of LOC339216 (Accession XP_290762.2) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339216.

[48625] LOC339282 (Accession XP_294900.2) is another GAM5385 target gene, herein designated TARGET GENE. LOC339282 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339282, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339282 BINDING SITE, designated SEQ ID:6084, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48626] Another function of GAM5385 is therefore inhibition of LOC339282 (Accession XP_294900.2) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339282.

[48627] LOC340178 (Accession XP_295181.1) is another

GAM5385 target gene, herein designated TARGET GENE. LOC340178 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC340178, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340178 BINDING SITE, designated SEQ ID:3108, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48628] Another function of GAM5385 is therefore inhibition of LOC340178 (Accession XP_295181.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340178.

[48629] LOC341036 (Accession XP_295967.2) is another GAM5385 target gene, herein designated TARGET GENE. LOC341036 BINDING SITE1 and LOC341036 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC341036, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC341036

BINDING SITE1 and LOC341036 BINDING SITE2, designated SEQ ID:2544 and SEQ ID:4152 respectively, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48630] Another function of GAM5385 is therefore inhibition of LOC341036 (Accession XP_295967.2) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC341036.

[48631] LOC341640 (Accession XP_292193.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC341640 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC341640, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC341640 BINDING SITE, designated SEQ ID:8348, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48632] Another function of GAM5385 is therefore inhibition of LOC341640 (Accession XP_292193.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC341640.

[48633] LOC343265 (Accession XP_291488.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC343265 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC343265, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC343265 BINDING SITE, designated SEQ ID:5095, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48634] Another function of GAM5385 is therefore inhibition of LOC343265 (Accession XP_291488.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC343265.

[48635] LOC348529 (Accession XP_302813.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC348529 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348529, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348529 BINDING SITE, designated SEQ ID:18900, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48636] Another function of GAM5385 is therefore inhibition of LOC348529 (Accession XP_302813.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348529.

[48637] LOC348734 (Accession XP_211718.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC348734 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348734, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348734 BINDING SITE, designated SEQ ID:2809, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48638] Another function of GAM5385 is therefore inhibition of

LOC348734 (Accession XP_211718.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348734.

[48639] LOC351012 (Accession XP_304617.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC351012 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC351012, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC351012 BINDING SITE, designated SEQ ID:18415, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48640] Another function of GAM5385 is therefore inhibition of LOC351012 (Accession XP_304617.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC351012.

[48641] LOC352051 (Accession XP_305365.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC352051 BINDING SITE is a target binding site found in

the 5` untranslated region of mRNA encoded by LOC352051, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC352051 BINDING SITE, designated SEQ ID:1884, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48642] Another function of GAM5385 is therefore inhibition of LOC352051 (Accession XP_305365.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC352051.

[48643] LOC55908 (Accession NP_061157.2) is another GAM5385 target gene, herein designated TARGET GENE. LOC55908 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC55908, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC55908 BINDING SITE, designated SEQ ID:6986, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48644] Another function of GAM5385 is therefore inhibition of LOC55908 (Accession NP_061157.2) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC55908.

[48645] LOC90719 (Accession XP_033704.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC90719 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC90719, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90719 BINDING SITE, designated SEQ ID:17254, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48646] Another function of GAM5385 is therefore inhibition of LOC90719 (Accession XP_033704.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90719.

[48647] LOC91947 (Accession XP_041721.2) is another GAM5385 target gene, herein designated TARGET GENE. LOC91947 BINDING SITE1 and LOC91947 BINDING SITE2 are target

binding sites found in untranslated regions of mRNA encoded by LOC91947, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC91947 BINDING SITE1 and LOC91947 BINDING SITE2, designated SEQ ID:7137 and SEQ ID:13311 respectively, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48648] Another function of GAM5385 is therefore inhibition of LOC91947 (Accession XP_041721.2) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91947.

[48649] LOC96597 (Accession XP_039922.1) is another GAM5385 target gene, herein designated TARGET GENE. LOC96597 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC96597, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC96597 BINDING SITE, designated SEQ ID:9062, to the nucleotide sequence of GAM5385 RNA, herein designated

GAM RNA, also designated SEQ ID:218.

[48650] Another function of GAM5385 is therefore inhibition of LOC96597 (Accession XP_039922.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC96597.

[48651] Loss of heterozygosity, 11, chromosomal region 2, gene a (LOH11CR2A, Accession NP_055437.1) is another GAM5385 target gene, herein designated TARGET GENE. LOH11CR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOH11CR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOH11CR2A BINDING SITE, designated SEQ ID:14358, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48652] Another function of GAM5385 is therefore inhibition of Loss of heterozygosity, 11, chromosomal region 2, gene a (LOH11CR2A, Accession NP_055437.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOH11CR2A.

[48653] Mads box transcription enhancer factor 2, polypeptide b (myocyte enhancer factor 2b) (MEF2B, Accession NP_005910.1) is another GAM5385 target gene, herein designated TARGET GENE. MEF2B BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MEF2B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MEF2B BINDING SITE, designated SEQ ID:13472, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48654] Another function of GAM5385 is therefore inhibition of Mads box transcription enhancer factor 2, polypeptide b (myocyte enhancer factor 2b) (MEF2B, Accession NP_005910.1), a gene which binds a consensus sequence that regulates transcription. Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MEF2B.

[48655] The function of MEF2B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM31.1.MGC11061 (Accession NP_115688.1) is another GAM5385 target gene, herein designated TARGET GENE. MGC11061 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC11061, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC11061 BINDING SITE, designated SEQ ID:10669, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48656] Another function of GAM5385 is therefore inhibition of MGC11061 (Accession NP_115688.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC11061.

[48657] MGC18216 (Accession NP_689665.1) is another GAM5385 target gene, herein designated TARGET GENE. MGC18216 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC18216, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

MGC18216 BINDING SITE, designated SEQ ID:8207, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48658] Another function of GAM5385 is therefore inhibition of MGC18216 (Accession NP_689665.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC18216.

[48659] MGC34713 (Accession NP_775936.1) is another GAM5385 target gene, herein designated TARGET GENE. MGC34713 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC34713, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC34713 BINDING SITE, designated SEQ ID:10134, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48660] Another function of GAM5385 is therefore inhibition of MGC34713 (Accession NP_775936.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC34713.

[48661] Nuclear receptor subfamily 2, group f, member 2 (NR2F2, Accession NP_066285.1) is another GAM5385 target gene, herein designated TARGET GENE. NR2F2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NR2F2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NR2F2 BINDING SITE, designated SEQ ID:11718, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48662] Another function of GAM5385 is therefore inhibition of Nuclear receptor subfamily 2, group f, member 2 (NR2F2, Accession NP_066285.1), a gene which is the regulation of the apolipoprotein ai gene transcription. Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NR2F2.

[48663] The function of NR2F2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM386.1.NY-REN-25 (Accession XP_027116.6) is another GAM5385 target gene, herein designated TARGET

GENE. NY-REN-25 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NY-REN-25, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NY-REN-25 BINDING SITE, designated SEQ ID:974, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48664] Another function of GAM5385 is therefore inhibition of NY-REN-25 (Accession XP_027116.6) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NY-REN-25.

[48665] NY-REN-41 (Accession NP_542385.1) is another GAM5385 target gene, herein designated TARGET GENE. NY-REN-41 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NY-REN-41, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NY-REN-41 BINDING SITE, designated SEQ ID:4623, to the nucleotide sequence of

GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48666] Another function of GAM5385 is therefore inhibition of NY-REN-41 (Accession NP_542385.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NY-REN-41.

[48667] Oxysterol binding protein-like 10 (OSBPL10, Accession NP_060254.2) is another GAM5385 target gene, herein designated TARGET GENE. OSBPL10 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OSBPL10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OSBPL10 BINDING SITE, designated SEQ ID:2040, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48668] Another function of GAM5385 is therefore inhibition of Oxysterol binding protein-like 10 (OSBPL10, Accession NP_060254.2) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OSBPL10.

[48669] Paired box gene 7 (PAX7, Accession NP_002575.1) is another GAM5385 target gene, herein designated TARGET GENE. PAX7 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PAX7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PAX7 BINDING SITE, designated SEQ ID:16405, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48670] Another function of GAM5385 is therefore inhibition of Paired box gene 7 (PAX7, Accession NP_002575.1), a gene which involves in myogenesis and therefore is associated with Rhabdomyosarcoma- 2. Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of Rhabdomyosarcoma- 2, and of other diseases and clinical conditions associated with PAX7.

[48671] The function of PAX7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM94.1.Paired box gene 7 (PAX7, Accession NP_039236.1) is another GAM5385 target gene, herein

designated TARGET GENE. PAX7 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PAX7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PAX7 BINDING SITE, designated SEQ ID:16405, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48672] Another function of GAM5385 is therefore inhibition of Paired box gene 7 (PAX7, Accession NP_039236.1), a gene which involves in myogenesis and therefore is associated with Rhabdomyosarcoma- 2. Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of Rhabdomyosarcoma- 2, and of other diseases and clinical conditions associated with PAX7.

[48673] The function of PAX7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM94.1.Phosphoglycerate dehydrogenase (PHGDH, Accession NP_006614.2) is another GAM5385 target gene, herein designated TARGET GENE. PHGDH BINDING SITE is a target binding site found in the 3` untranslated region

of mRNA encoded by PHGDH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PHGDH BINDING SITE, designated SEQ ID:14461, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48674] Another function of GAM5385 is therefore inhibition of Phosphoglycerate dehydrogenase (PHGDH, Accession NP_006614.2) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PHGDH.

[48675] Pleckstrin homology domain containing, family a (phosphoinositide binding specific) member 4 (PLEKHA4, Accession NP_065955.1) is another GAM5385 target gene, herein designated TARGET GENE. PLEKHA4 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PLEKHA4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PLEKHA4 BINDING SITE, designated SEQ ID:6785, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA,

also designated SEQ ID:218.

[48676] Another function of GAM5385 is therefore inhibition of Pleckstrin homology domain containing, family a (phosphoinositide binding specific) member 4 (PLEKHA4, Accession NP_065955.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PLEKHA4.

[48677] Pro-melanin-concentrating hormone-like 1 (PMCHL1, Accession NP_114093.1) is another GAM5385 target gene, herein designated TARGET GENE. PMCHL1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PMCHL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PMCHL1 BINDING SITE, designated SEQ ID:10293, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48678] Another function of GAM5385 is therefore inhibition of Pro-melanin-concentrating hormone-like 1 (PMCHL1, Accession NP_114093.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PMCHL1.

[48679] Pro-melanin-concentrating hormone-like 2 (PMCHL2, Accession NP_114094.1) is another GAM5385 target gene, herein designated TARGET GENE. PMCHL2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PMCHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PMCHL2 BINDING SITE, designated SEQ ID:3755, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48680] Another function of GAM5385 is therefore inhibition of Pro-melanin-concentrating hormone-like 2 (PMCHL2, Accession NP_114094.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PMCHL2.

[48681] Protein tyrosine phosphatase, non-receptor type 9 (PTPN9, Accession NP_002824.1) is another GAM5385 target gene, herein designated TARGET GENE. PTPN9 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PTPN9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of PTPN9 BINDING SITE, designated SEQ ID:13095, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48682] Another function of GAM5385 is therefore inhibition of Protein tyrosine phosphatase, non-receptor type 9 (PTPN9, Accession NP_002824.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTPN9.

[48683] Ras, dexamethasone-induced 1 (RASD1, Accession NP_057168.1) is another GAM5385 target gene, herein designated TARGET GENE. RASD1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RASD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RASD1 BINDING SITE, designated SEQ ID:9061, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48684] Another function of GAM5385 is therefore inhibition of Ras, dexamethasone-induced 1 (RASD1, Accession NP_057168.1), a gene which is a novel physiologic NO ef-

fector. Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RASD1.

[48685] The function of RASD1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM842.2.Regulator of g-protein signalling 2, 24kda (RGS2, Accession NP_002914.1) is another GAM5385 target gene, herein designated TARGET GENE. RGS2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RGS2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RGS2 BINDING SITE, designated SEQ ID:19470, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48686] Another function of GAM5385 is therefore inhibition of Regulator of g-protein signalling 2, 24kda (RGS2, Accession NP_002914.1), a gene which inhibits signal transduction by increasing the gtpase activity of g protein thereby driving them into their inactive gdp- bound form. and therefore may be associated with Rieger syndrome. Ac-

cordingly, utilities of GAM5385 include diagnosis, prevention and treatment of Rieger syndrome, and of other diseases and clinical conditions associated with RGS2.

[48687] The function of RGS2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM374.2.Regulator of g-protein signalling 6 (RGS6, Accession NP_004287.3) is another GAM5385 target gene, herein designated TARGET GENE. RGS6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RGS6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RGS6 BINDING SITE, designated SEQ ID:19481, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48688] Another function of GAM5385 is therefore inhibition of Regulator of g-protein signalling 6 (RGS6, Accession NP_004287.3) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RGS6.

[48689] RIS (Accession NP_057647.1) is another GAM5385 target

gene, herein designated TARGET GENE. RIS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RIS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RIS BINDING SITE, designated SEQ ID:6292, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48690] Another function of GAM5385 is therefore inhibition of RIS (Accession NP_057647.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RIS.

[48691] S100A15 (Accession NP_789793.1) is another GAM5385 target gene, herein designated TARGET GENE. S100A15 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by S100A15, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of S100A15 BINDING SITE, designated SEQ ID:5854, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48692] Another function of GAM5385 is therefore inhibition of S100A15 (Accession NP_789793.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with S100A15.

[48693] Secretory carrier membrane protein 3 (SCAMP3, Accession NP_443069.1) is another GAM5385 target gene, herein designated TARGET GENE. SCAMP3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SCAMP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SCAMP3 BINDING SITE, designated SEQ ID:12492, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48694] Another function of GAM5385 is therefore inhibition of Secretory carrier membrane protein 3 (SCAMP3, Accession NP_443069.1), a gene which functions in post- golgi recycling pathways and acts as a recycling carrier to the cell surface. Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCAMP3.

[48695] The function of SCAMP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM610.1.Secretory carrier membrane protein 3 (SCAMP3, Accession NP_005689.2) is another GAM5385 target gene, herein designated TARGET GENE. SCAMP3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SCAMP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SCAMP3 BINDING SITE, designated SEQ ID:12492, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48696] Another function of GAM5385 is therefore inhibition of Secretory carrier membrane protein 3 (SCAMP3, Accession NP_005689.2), a gene which functions in post- golgi recycling pathways and acts as a recycling carrier to the cell surface. Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCAMP3.

[48697] The function of SCAMP3 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM610.1.SEC61A1 (Accession NP_037468.1) is another GAM5385 target gene, herein designated TARGET GENE. SEC61A1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SEC61A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SEC61A1 BINDING SITE, designated SEQ ID:9945, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48698] Another function of GAM5385 is therefore inhibition of SEC61A1 (Accession NP_037468.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SEC61A1.

[48699] Selenoprotein x, 1 (SEPX1, Accession NP_057416.1) is another GAM5385 target gene, herein designated TARGET GENE. SEPX1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SEPX1, corresponding to a target binding site such as BINDING

SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SEPX1 BINDING SITE, designated SEQ ID:5607, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48700] Another function of GAM5385 is therefore inhibition of Selenoprotein x, 1 (SEPX1, Accession NP_057416.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SEPX1.

[48701] Serine (or cysteine) proteinase inhibitor, clade i (neuroserpin), member 2 (SERPINI2, Accession NP_006208.1) is another GAM5385 target gene, herein designated TARGET GENE. SERPINI2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SERPINI2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SERPINI2 BINDING SITE, designated SEQ ID:7346, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48702] Another function of GAM5385 is therefore inhibition of

Serine (or cysteine) proteinase inhibitor, clade i (neuroserpin), member 2 (SERPINI2, Accession NP_006208.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SERPINI2.

[48703] Solute carrier family 21 (organic anion transporter), member 14 (SLC21A14, Accession NP_059131.1) is another GAM5385 target gene, herein designated TARGET GENE. SLC21A14 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SLC21A14, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC21A14 BINDING SITE, designated SEQ ID:6067, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48704] Another function of GAM5385 is therefore inhibition of Solute carrier family 21 (organic anion transporter), member 14 (SLC21A14, Accession NP_059131.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC21A14.

[48705] SLC37A3 (Accession NP_115671.1) is another GAM5385 target gene, herein designated TARGET GENE. SLC37A3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC37A3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC37A3 BINDING SITE, designated SEQ ID:18317, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48706] Another function of GAM5385 is therefore inhibition of SLC37A3 (Accession NP_115671.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC37A3.

[48707] Tbc1 domain family, member 4 (TBC1D4, Accession NP_055647.1) is another GAM5385 target gene, herein designated TARGET GENE. TBC1D4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TBC1D4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TBC1D4 BINDING

SITE, designated SEQ ID:20148, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48708] Another function of GAM5385 is therefore inhibition of Tbc1 domain family, member 4 (TBC1D4, Accession NP_055647.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TBC1D4.

[48709] TLP19 (Accession NP_056997.1) is another GAM5385 target gene, herein designated TARGET GENE. TLP19 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TLP19, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TLP19 BINDING SITE, designated SEQ ID:12082, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48710] Another function of GAM5385 is therefore inhibition of TLP19 (Accession NP_056997.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TLP19.

[48711] TRIM43 (Accession NP_620155.1) is another GAM5385

target gene, herein designated TARGET GENE. TRIM43 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRIM43, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRIM43 BINDING SITE, designated SEQ ID:17789, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48712] Another function of GAM5385 is therefore inhibition of TRIM43 (Accession NP_620155.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRIM43.

[48713] Tubby homolog (mouse) (TUB, Accession NP_003311.2) is another GAM5385 target gene, herein designated TARGET GENE. TUB BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TUB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TUB BINDING SITE, designated SEQ ID:20119, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:218.

[48714] Another function of GAM5385 is therefore inhibition of Tubby homolog (mouse) (TUB, Accession NP_003311.2) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TUB.

[48715] Tubby homolog (mouse) (TUB, Accession NP_813977.1) is another GAM5385 target gene, herein designated TARGET GENE. TUB BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TUB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TUB BINDING SITE, designated SEQ ID:20119, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48716] Another function of GAM5385 is therefore inhibition of Tubby homolog (mouse) (TUB, Accession NP_813977.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TUB.

[48717] Ubiquitin-like 3 (UBL3, Accession NP_009037.1) is an-

other GAM5385 target gene, herein designated TARGET GENE. UBL3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UBL3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UBL3 BINDING SITE, designated SEQ ID:17405, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48718] Another function of GAM5385 is therefore inhibition of Ubiquitin-like 3 (UBL3, Accession NP_009037.1), a gene which appears to have a diverse range of cellular functions. Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UBL3.

[48719] The function of UBL3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.1.UPF2 (Accession NP_542166.1) is another GAM5385 target gene, herein designated TARGET GENE. UPF2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by UPF2, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UPF2 BINDING SITE, designated SEQ ID:17322, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48720] Another function of GAM5385 is therefore inhibition of UPF2 (Accession NP_542166.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UPF2.

[48721] UPF2 (Accession NP_056357.1) is another GAM5385 target gene, herein designated TARGET GENE. UPF2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by UPF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UPF2 BINDING SITE, designated SEQ ID:17322, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48722] Another function of GAM5385 is therefore inhibition of UPF2 (Accession NP_056357.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with UPF2.

[48723] Ubiquitin specific protease 15 (USP15, Accession NP_006304.1) is another GAM5385 target gene, herein designated TARGET GENE. USP15 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by USP15, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of USP15 BINDING SITE, designated SEQ ID:7999, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48724] Another function of GAM5385 is therefore inhibition of Ubiquitin specific protease 15 (USP15, Accession NP_006304.1) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with USP15.

[48725] XT3 (Accession NP_071800.1) is another GAM5385 target gene, herein designated TARGET GENE. XT3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by XT3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4

illustrates the complementarity of the nucleotide sequences of XT3 BINDING SITE, designated SEQ ID:9855, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48726] Another function of GAM5385 is therefore inhibition of XT3 (Accession NP_071800.1), a gene which is a Kidney-specific orphan transporter. Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with XT3.

[48727] The function of XT3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.1.XT3 (Accession NP_064593.1) is another GAM5385 target gene, herein designated TARGET GENE. XT3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by XT3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of XT3 BINDING SITE, designated SEQ ID:9855, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48728] Another function of GAM5385 is therefore inhibition of

XT3 (Accession NP_064593.1), a gene which is a Kidney-specific orphan transporter. Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with XT3.

[48729] The function of XT3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.1.Zinc finger protein 272 (ZNF272, Accession XP_030227.3) is another GAM5385 target gene, herein designated TARGET GENE. ZNF272 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF272, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF272 BINDING SITE, designated SEQ ID:19140, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48730] Another function of GAM5385 is therefore inhibition of Zinc finger protein 272 (ZNF272, Accession XP_030227.3) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF272.

[48731] ZNF463 (Accession NP_061025.3) is another GAM5385 target gene, herein designated TARGET GENE. ZNF463 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ZNF463, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF463 BINDING SITE, designated SEQ ID:1764, to the nucleotide sequence of GAM5385 RNA, herein designated GAM RNA, also designated SEQ ID:218.

[48732] Another function of GAM5385 is therefore inhibition of ZNF463 (Accession NP_061025.3) . Accordingly, utilities of GAM5385 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF463.

[48733]

[48734] Fig. 8 further provides a conceptual description of a novel bioinformatically detected of the present invention, referred to here as Genomic Address Messenger 7052 (GAM7052), which modulates expression of respective target genes thereof, the function and utility of which target genes is known in the art.

[48735] GAM7052 is a novel bioinformatically detected regulatory,

non protein coding, micro RNA (miRNA) gene. The method by which GAM7052 was detected is described hereinabove with reference to Figs. 8-15.

[48736] GAM7052 gene, herein designated GAM GENE, and GAM7052 target gene, herein designated TARGET GENE, are human genes contained in the human genome.

[48737] GAM7052 gene encodes a GAM7052 precursor RNA, herein designated GAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, GAM7052 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of GAM7052 precursor RNA is designated SEQ ID:10, and is provided hereinbelow with reference to the sequence listing part.

[48738] GAM7052 precursor RNA folds onto itself, forming GAM7052 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[48739] GAM7052 precursor RNA folds onto itself, forming GAM7052 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[48740] Nucleotide sequence of GAM7052 precursor RNA, designated SEQ-ID: 10, and a schematic representation of a predicted secondary folding of GAM7052 folded precursor RNA are further described with reference to Table 2, hereby incorporated by reference.

[48741] An enzyme complex designated DICER COMPLEX, `dices` the GAM7052 folded precursor RNA into GAM7052 RNA, herein designated GAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy Group: C) nucleotide sequence of GAM7052 RNA is desig-

nated SEQ ID:296, and is provided hereinbelow with references to the sequence listing part and Table 3, hereby incorporated by reference.

[48742] GAM7052 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM7052 target RNA, herein designated GAM TARGET RNA. GAM7052 target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[48743] GAM7052 RNA, herein designated GAM RNA, binds complementarily to one or more target binding sites located in untranslated regions of GAM7052 target RNA, herein designated GAM TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of GAM7052 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the target binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limiting GAM7052 RNA may have a different number of target

binding sites in untranslated regions of a GAM7052 target RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3`UTR region, this is meant as an example only these target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[48744] The complementary binding of GAM7052 RNA, herein designated GAM RNA, to target binding sites on GAM7052 target RNA, herein designated GAM TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM7052 target RNA into GAM7052 target protein, herein designated GAM TARGET PROTEIN. GAM target protein is therefore outlined by a broken line.

[48745] It is appreciated that GAM7052 target gene, herein designated TARGET GENE, in fact represents a plurality of GAM7052 target genes. The mRNA of each one of this plurality of GAM7052 target genes comprises one or more target binding sites, each having a nucleotide sequence which is at least partly complementary to GAM7052 RNA, herein designated GAM RNA, and which when bound by GAM7052 RNA causes inhibition of translation of respective one or more GAM7052 target proteins.

[48746] It is further appreciated by one skilled in the art that the

mode of translational inhibition illustrated by Fig. 8 with specific reference to translational inhibition exerted by GAM7052 gene, herein designated GAM GENE, on one or more GAM7052 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., Perspective: Glimpses of a tiny RNA world, Science 294,779 (2001)).

[48747] It is appreciated that specific functions and accordingly utilities of GAM7052 correlate with, and may be deduced from, the identity of the target genes which GAM7052 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[48748]

[48749]

[48750] (Accession NP_054819.1) is a GAM7052 target gene, herein designated TARGET GENE. BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BINDING SITE, designated SEQ ID:17475, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48751] A function of GAM7052 is therefore inhibition of (Accession NP_054819.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with .

[48752] Alpha-1-b glycoprotein (A1BG, Accession NP_570602.2) is another GAM7052 target gene, herein designated TARGET GENE. A1BG BINDING SITE1 through A1BG BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by A1BG, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of A1BG BINDING SITE1 through A1BG BINDING SITE3, designated SEQ

ID:4738, SEQ ID:19222 and SEQ ID:1831 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48753] Another function of GAM7052 is therefore inhibition of Alpha-1-b glycoprotein (A1BG, Accession NP_570602.2), a gene which a plasma protein of unknown function. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with A1BG.

[48754] The function of A1BG and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.A2BP1 (Accession NP_665898.1) is another GAM7052 target gene, herein designated TARGET GENE. A2BP1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by A2BP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of A2BP1 BINDING SITE, designated SEQ ID:11694, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48755] Another function of GAM7052 is therefore inhibition of A2BP1 (Accession NP_665898.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with A2BP1.

[48756] A2BP1 (Accession NP_665900.1) is another GAM7052 target gene, herein designated TARGET GENE. A2BP1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by A2BP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of A2BP1 BINDING SITE, designated SEQ ID:11694, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48757] Another function of GAM7052 is therefore inhibition of A2BP1 (Accession NP_665900.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with A2BP1.

[48758] A2BP1 (Accession NP_665899.1) is another GAM7052 target gene, herein designated TARGET GENE. A2BP1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by

A2BP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of A2BP1 BINDING SITE, designated SEQ ID:11694, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48759] Another function of GAM7052 is therefore inhibition of A2BP1 (Accession NP_665899.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with A2BP1.

[48760] A2BP1 (Accession NP_061193.2) is another GAM7052 target gene, herein designated TARGET GENE. A2BP1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by A2BP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of A2BP1 BINDING SITE, designated SEQ ID:11694, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48761] Another function of GAM7052 is therefore inhibition of

A2BP1 (Accession NP_061193.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with A2BP1.

[48762] Atp-binding cassette, sub-family b (mdr/tap), member 5 (ABCB5, Accession XP_291215.1) is another GAM7052 target gene, herein designated TARGET GENE. ABCB5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ABCB5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABCB5 BINDING SITE, designated SEQ ID:15685, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48763] Another function of GAM7052 is therefore inhibition of Atp-binding cassette, sub-family b (mdr/tap), member 5 (ABCB5, Accession XP_291215.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABCB5.

[48764] Ankyrin repeat and btb (poz) domain containing 1 (ABTB1, Accession NP_115937.1) is another GAM7052 target gene, herein designated TARGET GENE. ABTB1 BINDING SITE is a target binding site found in the 5` untranslated region of

multiple transcripts of mRNA encoded by ABTB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABTB1 BINDING SITE, designated SEQ ID:17325, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48765] Another function of GAM7052 is therefore inhibition of Ankyrin repeat and btb (poz) domain containing 1 (ABTB1, Accession NP_115937.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABTB1.

[48766] A disintegrin-like and metalloprotease (reprolysin type) with thrombospondin type 1 motif, 4 (ADAMTS4, Accession NP_005090.1) is another GAM7052 target gene, herein designated TARGET GENE. ADAMTS4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADAMTS4 BINDING SITE, designated SEQ ID:6395, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA,

also designated SEQ ID:296.

[48767] Another function of GAM7052 is therefore inhibition of A disintegrin-like and metalloprotease (reprolysin type) with thrombospondin type 1 motif, 4 (ADAMTS4, Accession NP_005090.1), a gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADAMTS4.

[48768] The function of ADAMTS4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Adenylate cyclase 6 (ADCY6, Accession NP_056085.1) is another GAM7052 target gene, herein designated TARGET GENE. ADCY6 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by ADCY6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADCY6 BINDING SITE, designated SEQ ID:20175, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48769] Another function of GAM7052 is therefore inhibition of Adenylate cyclase 6 (ADCY6, Accession NP_056085.1), a gene which this a membrane- bound, ca(2+)- inhibitable adenylyl cyclase (by similarity). Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADCY6.

[48770] The function of ADCY6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM67.2.Atp/gtp binding protein 1 (AGTPBP1, Accession NP_056054.1) is another GAM7052 target gene, herein designated TARGET GENE. AGTPBP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by AGTPBP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AGTPBP1 BINDING SITE, designated SEQ ID:16343, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48771] Another function of GAM7052 is therefore inhibition of Atp/gtp binding protein 1 (AGTPBP1, Accession NP_056054.1), a gene which a zinc carboxypeptidase .

Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AGTPBP1.

[48772] The function of AGTPBP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM480.1.Aldo-keto reductase family 1, member a1 (aldehyde reductase) (AKR1A1, Accession NP_006057.1) is another GAM7052 target gene, herein designated TARGET GENE. AKR1A1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by AKR1A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AKR1A1 BINDING SITE, designated SEQ ID:18726, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48773] Another function of GAM7052 is therefore inhibition of Aldo-keto reductase family 1, member a1 (aldehyde reductase) (AKR1A1, Accession NP_006057.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with AKR1A1.

[48774] Aldehyde dehydrogenase 1 family, member b1 (ALDH1B1, Accession NP_000683.3) is another GAM7052 target gene, herein designated TARGET GENE. ALDH1B1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ALDH1B1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ALDH1B1 BINDING SITE, designated SEQ ID:17862, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48775] Another function of GAM7052 is therefore inhibition of Aldehyde dehydrogenase 1 family, member b1 (ALDH1B1, Accession NP_000683.3) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ALDH1B1.

[48776] Arachidonate 15-lipoxygenase (ALOX15, Accession NP_001131.1) is another GAM7052 target gene, herein designated TARGET GENE. ALOX15 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ALOX15, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ALOX15 BINDING SITE, designated SEQ ID:11095, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48777] Another function of GAM7052 is therefore inhibition of Arachidonate 15-lipoxygenase (ALOX15, Accession NP_001131.1), a gene which converts arachidonic acid to 15s- hydroperoxyeicosatetraenoic acid. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ALOX15.

[48778] The function of ALOX15 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.AP1S3 (Accession XP_291023.1) is another GAM7052 target gene, herein designated TARGET GENE. AP1S3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by AP1S3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AP1S3 BINDING SITE, designated

SEQ ID:809, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48779] Another function of GAM7052 is therefore inhibition of AP1S3 (Accession XP_291023.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AP1S3.

[48780] Adaptor-related protein complex 3, sigma 2 subunit (AP3S2, Accession NP_005820.1) is another GAM7052 target gene, herein designated TARGET GENE. AP3S2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by AP3S2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AP3S2 BINDING SITE, designated SEQ ID:6157, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48781] Another function of GAM7052 is therefore inhibition of Adaptor-related protein complex 3, sigma 2 subunit (AP3S2, Accession NP_005820.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AP3S2.

[48782] Amyloid beta precursor protein (cytoplasmic tail) binding

protein 2 (APPBP2, Accession NP_006371.2) is another GAM7052 target gene, herein designated TARGET GENE. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APPBP2 BINDING SITE, designated SEQ ID:14578, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48783] Another function of GAM7052 is therefore inhibition of Amyloid beta precursor protein (cytoplasmic tail) binding protein 2 (APPBP2, Accession NP_006371.2), a gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore may be associated with Alzheimer's disease. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of Alzheimer's disease, and of other diseases and clinical conditions associated with APPBP2.

[48784] The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Aprataxin (APTX, Accession NP_060162.1) is

another GAM7052 target gene, herein designated TARGET GENE. APTX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by APTX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APTX BINDING SITE, designated SEQ ID:2203, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48785] Another function of GAM7052 is therefore inhibition of Aprataxin (APTX, Accession NP_060162.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APTX.

[48786] Aprataxin (APTX, Accession NP_778239.1) is another GAM7052 target gene, herein designated TARGET GENE. APTX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by APTX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APTX BINDING SITE, designated

SEQ ID:2203, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48787] Another function of GAM7052 is therefore inhibition of Aprataxin (APTX, Accession NP_778239.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APTX.

[48788] Aprataxin (APTX, Accession NP_778243.1) is another GAM7052 target gene, herein designated TARGET GENE. APTX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by APTX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APTX BINDING SITE, designated SEQ ID:2203, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48789] Another function of GAM7052 is therefore inhibition of Aprataxin (APTX, Accession NP_778243.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with APTX.

[48790] Aprataxin (APTX, Accession NP_778242.1) is another GAM7052 target gene, herein designated TARGET GENE. APTX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by APTX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APTX BINDING SITE, designated SEQ ID:2203, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48791] Another function of GAM7052 is therefore inhibition of Aprataxin (APTX, Accession NP_778242.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APTX.

[48792] Aprataxin (APTX, Accession NP_778241.1) is another GAM7052 target gene, herein designated TARGET GENE. APTX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by APTX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APTX BINDING SITE, designated SEQ ID:2203, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48793] Another function of GAM7052 is therefore inhibition of Aprataxin (APTX, Accession NP_778241.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APTX.

[48794] Aquaporin 6, kidney specific (AQP6, Accession NP_001643.1) is another GAM7052 target gene, herein designated TARGET GENE. AQP6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by AQP6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AQP6 BINDING SITE, designated SEQ ID:11163, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48795] Another function of GAM7052 is therefore inhibition of Aquaporin 6, kidney specific (AQP6, Accession

NP_001643.1), a gene which participates in distinct physiologic function such as glomerular filtration, tubular endocytosis, and acid- base metabolism. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AQP6.

[48796] The function of AQP6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM51.1.Aquaporin 6, kidney specific (AQP6, Accession NP_445738.1) is another GAM7052 target gene, herein designated TARGET GENE. AQP6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by AQP6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AQP6 BINDING SITE, designated SEQ ID:11163, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48797] Another function of GAM7052 is therefore inhibition of Aquaporin 6, kidney specific (AQP6, Accession NP_445738.1), a gene which participates in distinct physi-

ologic function such as glomerular filtration, tubular endocytosis, and acid- base metabolism. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AQP6.

[48798] The function of AQP6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM51.1.Archain 1 (ARCN1, Accession NP_001646.2) is another GAM7052 target gene, herein designated TARGET GENE. ARCN1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARCN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARCN1 BINDING SITE, designated SEQ ID:14158, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48799] Another function of GAM7052 is therefore inhibition of Archain 1 (ARCN1, Accession NP_001646.2), a gene which plays a fundamental role in eukaryotic cell biology. Accordingly, utilities of GAM7052 include diagnosis, preven-

tion and treatment of diseases and clinical conditions associated with ARCN1.

[48800] The function of ARCN1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Ras homolog gene family, member f (in filopodia) (ARHF, Accession NP_061907.1) is another GAM7052 target gene, herein designated TARGET GENE. ARHF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARHF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARHF BINDING SITE, designated SEQ ID:13834, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48801] Another function of GAM7052 is therefore inhibition of Ras homolog gene family, member f (in filopodia) (ARHF, Accession NP_061907.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARHF.

[48802] Rho gtpase activating protein 1 (ARHGAP1, Accession NP_004299.1) is another GAM7052 target gene, herein

designated TARGET GENE. ARHGAP1 BINDING SITE1 and ARHGAP1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by ARHGAP1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARHGAP1 BINDING SITE1 and ARHGAP1 BINDING SITE2, designated SEQ ID:13952 and SEQ ID:15853 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48803] Another function of GAM7052 is therefore inhibition of Rho gtpase activating protein 1 (ARHGAP1, Accession NP_004299.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARHGAP1.

[48804] ARPP-19 (Accession NP_006619.1) is another GAM7052 target gene, herein designated TARGET GENE. ARPP-19 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARPP-19, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARPP-19 BINDING SITE, designated SEQ ID:4389, to the

nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48805] Another function of GAM7052 is therefore inhibition of ARPP-19 (Accession NP_006619.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARPP-19.

[48806] Ankyrin repeat and socs box-containing 16 (ASB16, Accession NP_543139.4) is another GAM7052 target gene, herein designated TARGET GENE. ASB16 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ASB16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ASB16 BINDING SITE, designated SEQ ID:10273, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48807] Another function of GAM7052 is therefore inhibition of Ankyrin repeat and socs box-containing 16 (ASB16, Accession NP_543139.4) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ASB16.

[48808] Ankyrin repeat and socs box-containing 6 (ASB6, Accession NP_821066.1) is another GAM7052 target gene, herein designated TARGET GENE. ASB6 BINDING SITE1 and ASB6 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by ASB6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ASB6 BINDING SITE1 and ASB6 BINDING SITE2, designated SEQ ID:9847 and SEQ ID:13406 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48809] Another function of GAM7052 is therefore inhibition of Ankyrin repeat and socs box-containing 6 (ASB6, Accession NP_821066.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ASB6.

[48810] Ankyrin repeat and socs box-containing 6 (ASB6, Accession NP_060343.1) is another GAM7052 target gene, herein designated TARGET GENE. ASB6 BINDING SITE1 and ASB6 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA en-

coded by ASB6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ASB6 BINDING SITE1 and ASB6 BINDING SITE2, designated SEQ ID:9847 and SEQ ID:13406 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48811] Another function of GAM7052 is therefore inhibition of Ankyrin repeat and socs box-containing 6 (ASB6, Accession NP_060343.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ASB6.

[48812] ASE-1 (Accession NP_036231.1) is another GAM7052 target gene, herein designated TARGET GENE. ASE-1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ASE-1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ASE-1 BINDING SITE, designated SEQ ID:6396, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48813] Another function of GAM7052 is therefore inhibition of ASE-1 (Accession NP_036231.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ASE-1.

[48814] Atpase, (na+)/k+ transporting, beta 4 polypeptide (ATP1B4, Accession NP_036201.1) is another GAM7052 target gene, herein designated TARGET GENE. ATP1B4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ATP1B4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATP1B4 BINDING SITE, designated SEQ ID:11229, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48815] Another function of GAM7052 is therefore inhibition of Atpase, (na+)/k+ transporting, beta 4 polypeptide (ATP1B4, Accession NP_036201.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP1B4.

[48816] Atpase, h+ transporting, lysosomal 38kda, v0 subunit d isoform 2 (ATP6V0D2, Accession NP_689778.1) is another

GAM7052 target gene, herein designated TARGET GENE. ATP6V0D2 BINDING SITE1 and ATP6V0D2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by ATP6V0D2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATP6V0D2 BINDING SITE1 and ATP6V0D2 BINDING SITE2, designated SEQ ID:6393 and SEQ ID:14828 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48817] Another function of GAM7052 is therefore inhibition of Atpase, h+ transporting, lysosomal 38kda, v0 subunit d isoform 2 (ATP6V0D2, Accession NP_689778.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP6V0D2.

[48818] ATP6V1A (Accession NP_001681.2) is another GAM7052 target gene, herein designated TARGET GENE. ATP6V1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ATP6V1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of ATP6V1A BINDING SITE, designated SEQ ID:16885, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48819] Another function of GAM7052 is therefore inhibition of ATP6V1A (Accession NP_001681.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP6V1A.

[48820] Atpase, cu++ transporting, alpha polypeptide (menkes syndrome) (ATP7A, Accession NP_000043.1) is another GAM7052 target gene, herein designated TARGET GENE. ATP7A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ATP7A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATP7A BINDING SITE, designated SEQ ID:3639, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48821] Another function of GAM7052 is therefore inhibition of Atpase, cu++ transporting, alpha polypeptide (menkes syndrome) (ATP7A, Accession NP_000043.1) . Accord-

ingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP7A.

[48822] Atpase, class i, type 8b, member 2 (ATP8B2, Accession XP_290875.1) is another GAM7052 target gene, herein designated TARGET GENE. ATP8B2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ATP8B2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATP8B2 BINDING SITE, designated SEQ ID:11229, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48823] Another function of GAM7052 is therefore inhibition of Atpase, class i, type 8b, member 2 (ATP8B2, Accession XP_290875.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP8B2.

[48824] Axl receptor tyrosine kinase (AXL, Accession NP_068713.2) is another GAM7052 target gene, herein designated TARGET GENE. AXL BINDING SITE is a target binding site found in the 3` untranslated region of multi-

ple transcripts of mRNA encoded by AXL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AXL BINDING SITE, designated SEQ ID:9692, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48825] Another function of GAM7052 is therefore inhibition of Axl receptor tyrosine kinase (AXL, Accession NP_068713.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AXL.

[48826] Axl receptor tyrosine kinase (AXL, Accession NP_001690.2) is another GAM7052 target gene, herein designated TARGET GENE. AXL BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by AXL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AXL BINDING SITE, designated SEQ ID:9692, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48827] Another function of GAM7052 is therefore inhibition of Axl receptor tyrosine kinase (AXL, Accession NP_001690.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AXL.

[48828] Udp-gal:betaglcnac beta 1,3-galactosyltransferase, polypeptide 5 (B3GALT5, Accession NP_149360.1) is another GAM7052 target gene, herein designated TARGET GENE. B3GALT5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by B3GALT5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of B3GALT5 BINDING SITE, designated SEQ ID:7881, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48829] Another function of GAM7052 is therefore inhibition of Udp-gal:betaglcnac beta 1,3-galactosyltransferase, polypeptide 5 (B3GALT5, Accession NP_149360.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with B3GALT5.

[48830] Udp-gal:betaglcnac beta 1,3-galactosyltransferase, polypeptide 5 (B3GALT5, Accession NP_149363.1) is another GAM7052 target gene, herein designated TARGET GENE. B3GALT5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by B3GALT5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of B3GALT5 BINDING SITE, designated SEQ ID:7881, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48831] Another function of GAM7052 is therefore inhibition of Udp-gal:betaglcnac beta 1,3-galactosyltransferase, polypeptide 5 (B3GALT5, Accession NP_149363.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with B3GALT5.

[48832] Udp-gal:betaglcnac beta 1,3-galactosyltransferase, polypeptide 5 (B3GALT5, Accession NP_149361.1) is another GAM7052 target gene, herein designated TARGET GENE. B3GALT5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts

of mRNA encoded by B3GALT5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of B3GALT5 BINDING SITE, designated SEQ ID:7881, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48833] Another function of GAM7052 is therefore inhibition of Udp-gal:betaglcnac beta 1,3-galactosyltransferase, polypeptide 5 (B3GALT5, Accession NP_149361.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with B3GALT5.

[48834] Udp-gal:betaglcnac beta 1,3-galactosyltransferase, polypeptide 5 (B3GALT5, Accession NP_149362.1) is another GAM7052 target gene, herein designated TARGET GENE. B3GALT5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by B3GALT5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of B3GALT5 BINDING SITE, designated SEQ ID:7881, to the nucleotide se-

quence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48835] Another function of GAM7052 is therefore inhibition of Udp-gal:betaglcnac beta 1,3-galactosyltransferase, polypeptide 5 (B3GALT5, Accession NP_149362.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with B3GALT5.

[48836] Udp-gal:betaglcnac beta 1,3-galactosyltransferase, polypeptide 5 (B3GALT5, Accession NP_006048.1) is another GAM7052 target gene, herein designated TARGET GENE. B3GALT5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by B3GALT5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of B3GALT5 BINDING SITE, designated SEQ ID:7881, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48837] Another function of GAM7052 is therefore inhibition of Udp-gal:betaglcnac beta 1,3-galactosyltransferase, polypeptide 5 (B3GALT5, Accession NP_006048.1) . Ac-

cordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with B3GALT5.

[48838] Bcl2-associated athanogene 5 (BAG5, Accession NP_004864.1) is another GAM7052 target gene, herein designated TARGET GENE. BAG5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BAG5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BAG5 BINDING SITE, designated SEQ ID:19275, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48839] Another function of GAM7052 is therefore inhibition of Bcl2-associated athanogene 5 (BAG5, Accession NP_004864.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BAG5.

[48840] BCAP31 (Accession NP_005736.2) is another GAM7052 target gene, herein designated TARGET GENE. BCAP31 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BCAP31, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BCAP31 BINDING SITE, designated SEQ ID:13785, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48841] Another function of GAM7052 is therefore inhibition of BCAP31 (Accession NP_005736.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BCAP31.

[48842] BCLG (Accession NP_110393.1) is another GAM7052 target gene, herein designated TARGET GENE. BCLG BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by BCLG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BCLG BINDING SITE, designated SEQ ID:10887, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48843] Another function of GAM7052 is therefore inhibition of BCLG (Accession NP_110393.1) . Accordingly, utilities of

GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BCLG.

[48844] BCLG (Accession NP_620048.1) is another GAM7052 target gene, herein designated TARGET GENE. BCLG BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by BCLG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BCLG BINDING SITE, designated SEQ ID:10887, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48845] Another function of GAM7052 is therefore inhibition of BCLG (Accession NP_620048.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BCLG.

[48846] BM-002 (Accession NP_057701.1) is another GAM7052 target gene, herein designated TARGET GENE. BM-002 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BM-002, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

BM-002 BINDING SITE, designated SEQ ID:9516, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48847] Another function of GAM7052 is therefore inhibition of BM-002 (Accession NP_057701.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BM-002.

[48848] Breast cancer 1, early onset (BRCA1, Accession NP_009237.1) is another GAM7052 target gene, herein designated TARGET GENE. BRCA1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BRCA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BRCA1 BINDING SITE, designated SEQ ID:19804, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48849] Another function of GAM7052 is therefore inhibition of Breast cancer 1, early onset (BRCA1, Accession NP_009237.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with BRCA1.

[48850] BRIP1 (Accession NP_114432.1) is another GAM7052 target gene, herein designated TARGET GENE. BRIP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BRIP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BRIP1 BINDING SITE, designated SEQ ID:16280, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48851] Another function of GAM7052 is therefore inhibition of BRIP1 (Accession NP_114432.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BRIP1.

[48852] BXDC1 (Accession XP_166303.1) is another GAM7052 target gene, herein designated TARGET GENE. BXDC1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BXDC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BXDC1 BINDING SITE, designated SEQ ID:10897, to the nucleotide

sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48853] Another function of GAM7052 is therefore inhibition of BXDC1 (Accession XP_166303.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BXDC1.

[48854] C19orf9 (Accession XP_290171.1) is another GAM7052 target gene, herein designated TARGET GENE. C19orf9 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by C19orf9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C19orf9 BINDING SITE, designated SEQ ID:7215, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48855] Another function of GAM7052 is therefore inhibition of C19orf9 (Accession XP_290171.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C19orf9.

[48856] C1q and tumor necrosis factor related protein 6 (C1QTNF6, Accession NP_114116.2) is another GAM7052

target gene, herein designated TARGET GENE. C1QTNF6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C1QTNF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C1QTNF6 BINDING SITE, designated SEQ ID:13966, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48857] Another function of GAM7052 is therefore inhibition of C1q and tumor necrosis factor related protein 6 (C1QTNF6, Accession NP_114116.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1QTNF6.

[48858] Chromosome 20 open reading frame 161 (C20orf161, Accession NP_690857.1) is another GAM7052 target gene, herein designated TARGET GENE. C20orf161 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by C20orf161, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of C20orf161 BINDING SITE, designated SEQ ID:16361, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48859] Another function of GAM7052 is therefore inhibition of Chromosome 20 open reading frame 161 (C20orf161, Accession NP_690857.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf161.

[48860] Chromosome 20 open reading frame 161 (C20orf161, Accession NP_219489.1) is another GAM7052 target gene, herein designated TARGET GENE. C20orf161 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by C20orf161, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf161 BINDING SITE, designated SEQ ID:16361, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48861] Another function of GAM7052 is therefore inhibition of Chromosome 20 open reading frame 161 (C20orf161, Ac-

cession NP_219489.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf161.

[48862] C4orf9 (Accession XP_035572.1) is another GAM7052 target gene, herein designated TARGET GENE. C4orf9 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C4orf9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C4orf9 BINDING SITE, designated SEQ ID:4343, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48863] Another function of GAM7052 is therefore inhibition of C4orf9 (Accession XP_035572.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C4orf9.

[48864] C6orf141 (Accession NP_699175.1) is another GAM7052 target gene, herein designated TARGET GENE. C6orf141 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C6orf141, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of C6orf141 BINDING SITE, designated SEQ ID:17672, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48865] Another function of GAM7052 is therefore inhibition of C6orf141 (Accession NP_699175.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C6orf141.

[48866] C6orf57 (Accession NP_660310.1) is another GAM7052 target gene, herein designated TARGET GENE. C6orf57 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C6orf57, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C6orf57 BINDING SITE, designated SEQ ID:5864, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48867] Another function of GAM7052 is therefore inhibition of C6orf57 (Accession NP_660310.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

C6orf57.

[48868] Chromosome 8 open reading frame 12 (C8orf12, Accession NP_473358.1) is another GAM7052 target gene, herein designated TARGET GENE. C8orf12 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by C8orf12, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C8orf12 BINDING SITE, designated SEQ ID:8627, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48869] Another function of GAM7052 is therefore inhibition of Chromosome 8 open reading frame 12 (C8orf12, Accession NP_473358.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C8orf12.

[48870] Chromosome 9 open reading frame 9 (C9orf9, Accession NP_061829.2) is another GAM7052 target gene, herein designated TARGET GENE. C9orf9 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C9orf9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C9orf9 BINDING SITE, designated SEQ ID:16870, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48871] Another function of GAM7052 is therefore inhibition of Chromosome 9 open reading frame 9 (C9orf9, Accession NP_061829.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C9orf9.

[48872] Calcium channel, voltage-dependent, gamma subunit 6 (CACNG6, Accession NP_665814.1) is another GAM7052 target gene, herein designated TARGET GENE. CACNG6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CACNG6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CACNG6 BINDING SITE, designated SEQ ID:10214, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48873] Another function of GAM7052 is therefore inhibition of

Calcium channel, voltage-dependent, gamma subunit 6 (CACNG6, Accession NP_665814.1), a gene which plays a role in excitation- contraction coupling. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CACNG6.

[48874] The function of CACNG6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.Calcium channel, voltage-dependent, gamma subunit 6 (CACNG6, Accession NP_665813.1) is another GAM7052 target gene, herein designated TARGET GENE. CACNG6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CACNG6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CACNG6 BINDING SITE, designated SEQ ID:10214, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48875] Another function of GAM7052 is therefore inhibition of Calcium channel, voltage-dependent, gamma subunit 6

(CACNG6, Accession NP_665813.1), a gene which plays a role in excitation- contraction coupling. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CACNG6.

[48876] The function of CACNG6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.Calcium channel, voltage-dependent, gamma subunit 6 (CACNG6, Accession NP_114103.2) is another GAM7052 target gene, herein designated TARGET GENE. CACNG6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CACNG6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CACNG6 BINDING SITE, designated SEQ ID:10214, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48877] Another function of GAM7052 is therefore inhibition of Calcium channel, voltage-dependent, gamma subunit 6 (CACNG6, Accession NP_114103.2), a gene which plays a

role in excitation- contraction coupling. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CACNG6.

[48878] The function of CACNG6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.Calcium modulating ligand (CAMLG, Accession NP_001736.1) is another GAM7052 target gene, herein designated TARGET GENE. CAMLG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAMLG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAMLG BINDING SITE, designated SEQ ID:2107, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48879] Another function of GAM7052 is therefore inhibition of Calcium modulating ligand (CAMLG, Accession NP_001736.1), a gene which is likely involved in the mobilization of calcium as a result of the tcr/cd3 complex interaction. Accordingly, utilities of GAM7052 include diag-

nosis, prevention and treatment of diseases and clinical conditions associated with CAMLG.

[48880] The function of CAMLG and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.CAPRI (Accession NP_008920.3) is another GAM7052 target gene, herein designated TARGET GENE. CAPRI BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAPRI, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAPRI BINDING SITE, designated SEQ ID:7042, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48881] Another function of GAM7052 is therefore inhibition of CAPRI (Accession NP_008920.3) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAPRI.

[48882] Caspase recruitment domain family, member 6 (CARD6, Accession NP_115976.2) is another GAM7052 target gene, herein designated TARGET GENE. CARD6 BINDING SITE is a target binding site found in the 3` untranslated region of

mRNA encoded by CARD6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CARD6 BINDING SITE, designated SEQ ID:2824, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48883] Another function of GAM7052 is therefore inhibition of Caspase recruitment domain family, member 6 (CARD6, Accession NP_115976.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CARD6.

[48884] Core-binding factor, runt domain, alpha subunit 2; translocated to, 2 (CBFA2T2, Accession NP_005084.1) is another GAM7052 target gene, herein designated TARGET GENE. CBFA2T2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CBFA2T2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CBFA2T2 BINDING SITE, designated SEQ ID:1249, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA,

also designated SEQ ID:296.

[48885] Another function of GAM7052 is therefore inhibition of Core-binding factor, runt domain, alpha subunit 2; translocated to, 2 (CBFA2T2, Accession NP_005084.1), a gene which is a putative transcription factor. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CBFA2T2.

[48886] The function of CBFA2T2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.1.Core-binding factor, runt domain, alpha subunit 2; translocated to, 2 (CBFA2T2, Accession NP_787060.1) is another GAM7052 target gene, herein designated TARGET GENE. CBFA2T2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CBFA2T2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CBFA2T2 BINDING SITE, designated SEQ ID:1249, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48887] Another function of GAM7052 is therefore inhibition of Core-binding factor, runt domain, alpha subunit 2; translocated to, 2 (CBFA2T2, Accession NP_787060.1), a gene which is a putative transcription factor. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CBFA2T2.

[48888] The function of CBFA2T2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.1.Chemokine (c-c motif) ligand 16 (CCL16, Accession NP_004581.1) is another GAM7052 target gene, herein designated TARGET GENE. CCL16 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CCL16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCL16 BINDING SITE, designated SEQ ID:12626, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48889] Another function of GAM7052 is therefore inhibition of Chemokine (c-c motif) ligand 16 (CCL16, Accession

NP_004581.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCL16.

[48890] Chemokine (c-c motif) ligand 22 (CCL22, Accession NP_002981.2) is another GAM7052 target gene, herein designated TARGET GENE. CCL22 BINDING SITE1 and CCL22 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CCL22, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCL22 BINDING SITE1 and CCL22 BINDING SITE2, designated SEQ ID:6967 and SEQ ID:13638 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48891] Another function of GAM7052 is therefore inhibition of Chemokine (c-c motif) ligand 22 (CCL22, Accession NP_002981.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCL22.

[48892] Chemokine (c-c motif) ligand 28 (CCL28, Accession NP_062820.1) is another GAM7052 target gene, herein designated TARGET GENE. CCL28 BINDING SITE is a target

binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CCL28, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCL28 BINDING SITE, designated SEQ ID:5390, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48893] Another function of GAM7052 is therefore inhibition of Chemokine (c-c motif) ligand 28 (CCL28, Accession NP_062820.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCL28.

[48894] Cyclin f (CCNF, Accession NP_001752.1) is another GAM7052 target gene, herein designated TARGET GENE. CCNF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CCNF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCNF BINDING SITE, designated SEQ ID:8016, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48895] Another function of GAM7052 is therefore inhibition of Cyclin f (CCNF, Accession NP_001752.1), a gene which likely to be involved in the control of the cell cycle during s phase and g2. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCNF.

[48896] The function of CCNF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.CCNL2 (Accession NP_112199.1) is another GAM7052 target gene, herein designated TARGET GENE. CCNL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CCNL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCNL2 BINDING SITE, designated SEQ ID:8702, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48897] Another function of GAM7052 is therefore inhibition of CCNL2 (Accession NP_112199.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCNL2.

[48898] Cd24 antigen (small cell lung carcinoma cluster 4 antigen) (CD24, Accession NP_037362.1) is another GAM7052 target gene, herein designated TARGET GENE. CD24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CD24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CD24 BINDING SITE, designated SEQ ID:12740, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48899] Another function of GAM7052 is therefore inhibition of Cd24 antigen (small cell lung carcinoma cluster 4 antigen) (CD24, Accession NP_037362.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CD24.

[48900] Cdc14 cell division cycle 14 homolog b (s. cerevisiae) (CDC14B, Accession NP_201589.1) is another GAM7052 target gene, herein designated TARGET GENE. CDC14B BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CDC14B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDC14B BINDING SITE, designated SEQ ID:8433, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48901] Another function of GAM7052 is therefore inhibition of Cdc14 cell division cycle 14 homolog b (s. cerevisiae) (CDC14B, Accession NP_201589.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDC14B.

[48902] Cell division cycle 2-like 2 (CDC2L2, Accession NP_296370.1) is another GAM7052 target gene, herein designated TARGET GENE. CDC2L2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CDC2L2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDC2L2 BINDING SITE, designated SEQ ID:14683, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48903] Another function of GAM7052 is therefore inhibition of

Cell division cycle 2-like 2 (CDC2L2, Accession NP_296370.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDC2L2.

[48904] Cdc6 cell division cycle 6 homolog (s. cerevisiae) (CDC6, Accession NP_001245.1) is another GAM7052 target gene, herein designated TARGET GENE. CDC6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CDC6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDC6 BINDING SITE, designated SEQ ID:2823, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48905] Another function of GAM7052 is therefore inhibition of Cdc6 cell division cycle 6 homolog (s. cerevisiae) (CDC6, Accession NP_001245.1), a gene which is a component of the origin recognition complex (orc) that binds origins of replication. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDC6.

[48906] The function of CDC6 and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Cadherin 1, type 1, e-cadherin (epithelial) (CDH1, Accession NP_004351.1) is another GAM7052 target gene, herein designated TARGET GENE. CDH1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CDH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDH1 BINDING SITE, designated SEQ ID:15641, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48907] Another function of GAM7052 is therefore inhibition of Cadherin 1, type 1, e-cadherin (epithelial) (CDH1, Accession NP_004351.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDH1.

[48908] Cadherin 11, type 2, ob-cadherin (osteoblast) (CDH11, Accession NP_387513.1) is another GAM7052 target gene, herein designated TARGET GENE. CDH11 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CDH11, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDH11 BINDING SITE, designated SEQ ID:7516, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48909] Another function of GAM7052 is therefore inhibition of Cadherin 11, type 2, ob-cadherin (osteoblast) (CDH11, Accession NP_387513.1), a gene which plays an role in development and maintenance of tissues. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDH11.

[48910] The function of CDH11 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM206.1.Carcinoembryonic antigen-related cell adhesion molecule 8 (CEACAM8, Accession NP_001807.2) is another GAM7052 target gene, herein designated TARGET GENE. CEACAM8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CEACAM8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CEACAM8 BINDING SITE, designated SEQ ID:9995, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48911] Another function of GAM7052 is therefore inhibition of Carcinoembryonic antigen-related cell adhesion molecule 8 (CEACAM8, Accession NP_001807.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CEACAM8.

[48912] Cat eye syndrome chromosome region, candidate 1 (CECR1, Accession NP_059120.2) is another GAM7052 target gene, herein designated TARGET GENE. CECR1 BINDING SITE1 and CECR1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CECR1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CECR1 BINDING SITE1 and CECR1 BINDING SITE2, designated SEQ ID:5536 and SEQ ID:5536 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA,

also designated SEQ ID:296.

[48913] Another function of GAM7052 is therefore inhibition of Cat eye syndrome chromosome region, candidate 1 (CECR1, Accession NP_059120.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CECR1.

[48914] Cat eye syndrome chromosome region, candidate 1 (CECR1, Accession NP_059120.2) is another GAM7052 target gene, herein designated TARGET GENE. CECR1 BINDING SITE1 and CECR1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CECR1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CECR1 BINDING SITE1 and CECR1 BINDING SITE2, designated SEQ ID:16723 and SEQ ID:16723 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48915] Another function of GAM7052 is therefore inhibition of Cat eye syndrome chromosome region, candidate 1 (CECR1, Accession NP_059120.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with CECR1.

[48916] CGI-14 (Accession NP_057028.2) is another GAM7052 target gene, herein designated TARGET GENE. CGI-14 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CGI-14, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CGI-14 BINDING SITE, designated SEQ ID:17011, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48917] Another function of GAM7052 is therefore inhibition of CGI-14 (Accession NP_057028.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CGI-14.

[48918] CGI-18 (Accession NP_057031.1) is another GAM7052 target gene, herein designated TARGET GENE. CGI-18 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CGI-18, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CGI-18 BINDING SITE, designated SEQ ID:16885, to the

nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48919] Another function of GAM7052 is therefore inhibition of CGI-18 (Accession NP_057031.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CGI-18.

[48920] Chromatin accessibility complex 1 (CHRAC1, Accession NP_059140.1) is another GAM7052 target gene, herein designated TARGET GENE. CHRAC1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CHRAC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CHRAC1 BINDING SITE, designated SEQ ID:8325, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48921] Another function of GAM7052 is therefore inhibition of Chromatin accessibility complex 1 (CHRAC1, Accession NP_059140.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CHRAC1.

[48922] Cholinergic receptor, nicotinic, beta polypeptide 4

(CHRNB4, Accession NP_000741.1) is another GAM7052 target gene, herein designated TARGET GENE. CHRNB4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CHRNB4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CHRNB4 BINDING SITE, designated SEQ ID:13754, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48923] Another function of GAM7052 is therefore inhibition of Cholinergic receptor, nicotinic, beta polypeptide 4 (CHRNB4, Accession NP_000741.1), a gene which mediates fast signal transmission at synapses. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CHRNB4.

[48924] The function of CHRNB4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM76.1.Carbohydrate (chondroitin) synthase 1 (CHSY1, Accession NP_055733.2) is another GAM7052 target gene, herein designated TARGET GENE. CHSY1

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CHSY1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CHSY1 BINDING SITE, designated SEQ ID:9811, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48925] Another function of GAM7052 is therefore inhibition of Carbohydrate (chondroitin) synthase 1 (CHSY1, Accession NP_055733.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CHSY1.

[48926] Cold autoinflammatory syndrome 1 (CIAS1, Accession NP_004886.2) is another GAM7052 target gene, herein designated TARGET GENE. CIAS1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CIAS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CIAS1 BINDING SITE, designated SEQ ID:12643, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ

ID:296.

[48927] Another function of GAM7052 is therefore inhibition of Cold autoinflammatory syndrome 1 (CIAS1, Accession NP_004886.2), a gene which may mediate protein- protein interactions; contains a leucine rich repeat and therefore may be associated with Familial cold autoinflammatory syndrome, muckle- wells syndrome. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of Familial cold autoinflammatory syndrome, muckle- wells syndrome, and of other diseases and clinical conditions associated with CIAS1.

[48928] The function of CIAS1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM90.1.CIP29 (Accession NP_115740.3) is another GAM7052 target gene, herein designated TARGET GENE. CIP29 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CIP29, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CIP29 BINDING SITE, designated SEQ ID:11229, to the nucleotide sequence of GAM7052 RNA, herein designated

GAM RNA, also designated SEQ ID:296.

[48929] Another function of GAM7052 is therefore inhibition of CIP29 (Accession NP_115740.3) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CIP29.

[48930] C-type (calcium dependent, carbohydrate-recognition domain) lectin, superfamily member 12 (CLECSF12, Accession NP_072092.2) is another GAM7052 target gene, herein designated TARGET GENE. CLECSF12 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CLECSF12, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLECSF12 BINDING SITE, designated SEQ ID:10135, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48931] Another function of GAM7052 is therefore inhibition of C-type (calcium dependent, carbohydrate-recognition domain) lectin, superfamily member 12 (CLECSF12, Accession NP_072092.2), a gene which is a pattern- recognition receptor . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical

conditions associated with CLECSF12.

[48932] The function of CLECSF12 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.Ceroid-lipofuscinosis, neuronal 8 (epilepsy, progressive with mental retardation) (CLN8, Accession NP_061764.2) is another GAM7052 target gene, herein designated TARGET GENE. CLN8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CLN8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLN8 BINDING SITE, designated SEQ ID:3696, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48933] Another function of GAM7052 is therefore inhibition of Ceroid-lipofuscinosis, neuronal 8 (epilepsy, progressive with mental retardation) (CLN8, Accession NP_061764.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLN8.

[48934] cPLA2delta (Accession NP_828848.1) is another GAM7052 target gene, herein designated TARGET GENE. cPLA2delta BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by cPLA2delta, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of cPLA2delta BINDING SITE, designated SEQ ID:10898, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48935] Another function of GAM7052 is therefore inhibition of cPLA2delta (Accession NP_828848.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with cPLA2delta.

[48936] cPLA2delta (Accession XP_208820.2) is another GAM7052

target gene, herein designated TARGET GENE. cPLA2delta BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by cPLA2delta, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of cPLA2delta BINDING SITE, designated SEQ ID:10898, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48937] Another function of GAM7052 is therefore inhibition of cPLA2delta (Accession XP_208820.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with cPLA2delta.

[48938] Cleavage and polyadenylation specific factor 2, 100kda (CPSF2, Accession XP_029311.2) is another GAM7052 target gene, herein designated TARGET GENE. CPSF2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CPSF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CPSF2

BINDING SITE, designated SEQ ID:16291, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48939] Another function of GAM7052 is therefore inhibition of Cleavage and polyadenylation specific factor 2, 100kda (CPSF2, Accession XP_029311.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CPSF2.

[48940] Cytokine receptor-like factor 3 (CRLF3, Accession NP_057070.2) is another GAM7052 target gene, herein designated TARGET GENE. CRLF3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CRLF3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CRLF3 BINDING SITE, designated SEQ ID:10228, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48941] Another function of GAM7052 is therefore inhibition of Cytokine receptor-like factor 3 (CRLF3, Accession NP_057070.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with CRLF3.

[48942] Cofactor required for sp1 transcriptional activation, subunit 6, 77kda (CRSP6, Accession NP_004259.3) is another GAM7052 target gene, herein designated TARGET GENE. CRSP6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CRSP6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CRSP6 BINDING SITE, designated SEQ ID:5118, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48943] Another function of GAM7052 is therefore inhibition of Cofactor required for sp1 transcriptional activation, subunit 6, 77kda (CRSP6, Accession NP_004259.3), a gene which is required for Sp1 mediated transcriptional activation with TAF(II)s. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CRSP6.

[48944] The function of CRSP6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.CTEN (Accession NP_116254.3) is another

GAM7052 target gene, herein designated TARGET GENE. CTEN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTEN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CTEN BINDING SITE, designated SEQ ID:4888, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48945] Another function of GAM7052 is therefore inhibition of CTEN (Accession NP_116254.3) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CTEN.

[48946] CYCS (Accession NP_061820.1) is another GAM7052 target gene, herein designated TARGET GENE. CYCS BINDING SITE1 and CYCS BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CYCS, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYCS BINDING SITE1 and CYCS BINDING SITE2, designated SEQ ID:18745 and SEQ ID:6532 respectively, to the nucleotide sequence of GAM7052 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:296.

[48947] Another function of GAM7052 is therefore inhibition of CYCS (Accession NP_061820.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYCS.

[48948] Cylicin, basic protein of sperm head cytoskeleton 2 (CYLC2, Accession NP_001331.1) is another GAM7052 target gene, herein designated TARGET GENE. CYLC2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CYLC2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYLC2 BINDING SITE, designated SEQ ID:13498, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48949] Another function of GAM7052 is therefore inhibition of Cylicin, basic protein of sperm head cytoskeleton 2 (CYLC2, Accession NP_001331.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYLC2.

[48950] CYP24A1 (Accession NP_000773.1) is another GAM7052 target gene, herein designated TARGET GENE. CYP24A1

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CYP24A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYP24A1 BINDING SITE, designated SEQ ID:5450, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48951] Another function of GAM7052 is therefore inhibition of CYP24A1 (Accession NP_000773.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYP24A1.

[48952] Cytochrome p450, subfamily iib (phenobarbital-inducible), polypeptide 6 (CYP2B6, Accession NP_000758.1) is another GAM7052 target gene, herein designated TARGET GENE. CYP2B6 BINDING SITE1 and CYP2B6 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CYP2B6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYP2B6 BINDING SITE1 and CYP2B6 BINDING

SITE2, designated SEQ ID:14638 and SEQ ID:14013 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48953] Another function of GAM7052 is therefore inhibition of Cytochrome p450, subfamily iib (phenobarbital-inducible), polypeptide 6 (CYP2B6, Accession NP_000758.1), a gene which oxidizes a variety of structurally unrelated compounds, including steroids, fatty acids, and xenobiotics. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYP2B6.

[48954] The function of CYP2B6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Cytochrome p450, subfamily viiib (sterol 12-alpha-hydroxylase), polypeptide 1 (CYP8B1, Accession NP_004382.1) is another GAM7052 target gene, herein designated TARGET GENE. CYP8B1 BINDING SITE1 and CYP8B1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CYP8B1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

CYP8B1 BINDING SITE1 and CYP8B1 BINDING SITE2, designated SEQ ID:5688 and SEQ ID:14961 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48955] Another function of GAM7052 is therefore inhibition of Cytochrome p450, subfamily viiib (sterol 12-alpha-hydroxylase), polypeptide 1 (CYP8B1, Accession NP_004382.1), a gene which functions in bile acid biosynthesis. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYP8B1.

[48956] The function of CYP8B1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_835365.1) is another GAM7052 target gene, herein designated TARGET GENE. DCX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DCX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DCX BINDING SITE, designated SEQ

ID:5712, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48957] Another function of GAM7052 is therefore inhibition of Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_835365.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DCX.

[48958] Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_000546.2) is another GAM7052 target gene, herein designated TARGET GENE. DCX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DCX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DCX BINDING SITE, designated SEQ ID:5712, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48959] Another function of GAM7052 is therefore inhibition of Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_000546.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DCX.

[48960] Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_835366.1) is another GAM7052 target gene, herein designated TARGET GENE. DCX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DCX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DCX BINDING SITE, designated SEQ ID:5712, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48961] Another function of GAM7052 is therefore inhibition of Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_835366.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DCX.

[48962] Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_835364.1) is another GAM7052 target gene, herein designated TARGET GENE. DCX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DCX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4

illustrates the complementarity of the nucleotide sequences of DCX BINDING SITE, designated SEQ ID:5712, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48963] Another function of GAM7052 is therefore inhibition of Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_835364.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DCX.

[48964] Dna fragmentation factor, 40kda, beta polypeptide (caspase-activated dnase) (DFFB, Accession NP_004393.1) is another GAM7052 target gene, herein designated TARGET GENE. DFFB BINDING SITE1 and DFFB BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DFFB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DFFB BINDING SITE1 and DFFB BINDING SITE2, designated SEQ ID:12740 and SEQ ID:16722 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48965] Another function of GAM7052 is therefore inhibition of

Dna fragmentation factor, 40kda, beta polypeptide (caspase-activated dnase) (DFFB, Accession NP_004393.1), a gene which induces DNA fragmentation and chromatin condensation during apoptosis. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DFFB.

[48966] The function of DFFB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.DKFZp434C0923 (Accession NP_060068.1) is another GAM7052 target gene, herein designated TARGET GENE. DKFZp434C0923 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp434C0923, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp434C0923 BINDING SITE, designated SEQ ID:8218, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48967] Another function of GAM7052 is therefore inhibition of DKFZp434C0923 (Accession NP_060068.1) . Accordingly,

utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp434C0923.

[48968] DKFZP434D146 (Accession NP_056410.2) is another GAM7052 target gene, herein designated TARGET GENE. DKFZP434D146 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP434D146, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434D146 BINDING SITE, designated SEQ ID:2840, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48969] Another function of GAM7052 is therefore inhibition of DKFZP434D146 (Accession NP_056410.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434D146.

[48970] DKFZP434F0318 (Accession NP_110444.1) is another GAM7052 target gene, herein designated TARGET GENE. DKFZP434F0318 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

DKFZP434F0318, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434F0318 BINDING SITE, designated SEQ ID:5215, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48971] Another function of GAM7052 is therefore inhibition of DKFZP434F0318 (Accession NP_110444.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434F0318.

[48972] DKFZp547A023 (Accession NP_061174.1) is another GAM7052 target gene, herein designated TARGET GENE. DKFZp547A023 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp547A023, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp547A023 BINDING SITE, designated SEQ ID:15974, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48973] Another function of GAM7052 is therefore inhibition of DKFZp547A023 (Accession NP_061174.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp547A023.

[48974] DKFZP564G092 (Accession NP_056416.1) is another GAM7052 target gene, herein designated TARGET GENE. DKFZP564G092 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by DKFZP564G092, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP564G092 BINDING SITE, designated SEQ ID:11229, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48975] Another function of GAM7052 is therefore inhibition of DKFZP564G092 (Accession NP_056416.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP564G092.

[48976] DKFZP564O0523 (Accession NP_115496.1) is another GAM7052 target gene, herein designated TARGET GENE.

DKFZP564O0523 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP564O0523, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP564O0523 BINDING SITE, designated SEQ ID:19558, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48977] Another function of GAM7052 is therefore inhibition of DKFZP564O0523 (Accession NP_115496.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP564O0523.

[48978] DKFZP566I1024 (Accession NP_056226.1) is another GAM7052 target gene, herein designated TARGET GENE. DKFZP566I1024 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP566I1024, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP566I1024 BINDING SITE, designated SEQ ID:9433, to the nucleotide sequence of

GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48979] Another function of GAM7052 is therefore inhibition of DKFZP566I1024 (Accession NP_056226.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP566I1024.

[48980] DKFZP586D0919 (Accession NP_056248.1) is another GAM7052 target gene, herein designated TARGET GENE. DKFZP586D0919 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP586D0919, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP586D0919 BINDING SITE, designated SEQ ID:9678, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48981] Another function of GAM7052 is therefore inhibition of DKFZP586D0919 (Accession NP_056248.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP586D0919.

[48982] DKFZp586I1420 (Accession NP_689960.1) is another GAM7052 target gene, herein designated TARGET GENE. DKFZp586I1420 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp586I1420, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp586I1420 BINDING SITE, designated SEQ ID:3745, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48983] Another function of GAM7052 is therefore inhibition of DKFZp586I1420 (Accession NP_689960.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp586I1420.

[48984] DKFZP586M1120 (Accession NP_112584.1) is another GAM7052 target gene, herein designated TARGET GENE. DKFZP586M1120 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP586M1120, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of DKFZP586M1120 BINDING SITE, designated SEQ ID:3746, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48985] Another function of GAM7052 is therefore inhibition of DKFZP586M1120 (Accession NP_112584.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP586M1120.

[48986] DKFZp667B1218 (Accession NP_808881.1) is another GAM7052 target gene, herein designated TARGET GENE. DKFZp667B1218 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp667B1218, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp667B1218 BINDING SITE, designated SEQ ID:7365, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48987] Another function of GAM7052 is therefore inhibition of DKFZp667B1218 (Accession NP_808881.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with DKFZp667B1218.

[48988] DKFZp761B107 (Accession NP_775734.1) is another GAM7052 target gene, herein designated TARGET GENE. DKFZp761B107 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp761B107, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761B107 BINDING SITE, designated SEQ ID:14917, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48989] Another function of GAM7052 is therefore inhibition of DKFZp761B107 (Accession NP_775734.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761B107.

[48990] DKFZp761B128 (Accession NP_689650.1) is another GAM7052 target gene, herein designated TARGET GENE. DKFZp761B128 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by DKFZp761B128, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761B128 BINDING SITE, designated SEQ ID:3467, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48991] Another function of GAM7052 is therefore inhibition of DKFZp761B128 (Accession NP_689650.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761B128.

[48992] DKFZp761H039 (Accession NP_061181.1) is another GAM7052 target gene, herein designated TARGET GENE. DKFZp761H039 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp761H039, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761H039 BINDING SITE, designated SEQ ID:3638, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48993] Another function of GAM7052 is therefore inhibition of

DKFZp761H039 (Accession NP_061181.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761H039.

[48994] DKFZp761P1121 (Accession NP_690870.1) is another GAM7052 target gene, herein designated TARGET GENE. DKFZp761P1121 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp761P1121, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761P1121 BINDING SITE, designated SEQ ID:6533, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48995] Another function of GAM7052 is therefore inhibition of DKFZp761P1121 (Accession NP_690870.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761P1121.

[48996] DKFZp762L0311 (Accession NP_061189.2) is another GAM7052 target gene, herein designated TARGET GENE. DKFZp762L0311 BINDING SITE is a target binding site

found in the 3` untranslated region of mRNA encoded by DKFZp762L0311, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp762L0311 BINDING SITE, designated SEQ ID:13279, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48997] Another function of GAM7052 is therefore inhibition of DKFZp762L0311 (Accession NP_061189.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp762L0311.

[48998] DLAD (Accession NP_490649.1) is another GAM7052 target gene, herein designated TARGET GENE. DLAD BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by DLAD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DLAD BINDING SITE, designated SEQ ID:10031, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[48999] Another function of GAM7052 is therefore inhibition of DLAD (Accession NP_490649.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DLAD.

[49000] Dihydrolipoamide s-succinyltransferase (e2 component of 2-oxo-glutarate complex) (DLST, Accession NP_001924.2) is another GAM7052 target gene, herein designated TARGET GENE. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DLST BINDING SITE, designated SEQ ID:9118, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49001] Another function of GAM7052 is therefore inhibition of Dihydrolipoamide s-succinyltransferase (e2 component of 2-oxo-glutarate complex) (DLST, Accession NP_001924.2), a gene which catalyzes the oxidative decarboxylation of alpha- keto acids. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DLST.

[49002] The function of DLST and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM507.1.Desmocollin 3 (DSC3, Accession NP_077741.1) is another GAM7052 target gene, herein designated TARGET GENE. DSC3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DSC3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DSC3 BINDING SITE, designated SEQ ID:9847, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49003] Another function of GAM7052 is therefore inhibition of Desmocollin 3 (DSC3, Accession NP_077741.1), a gene which is a component of intercellular desmosome junctions. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DSC3.

[49004] The function of DSC3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Desmocollin 3 (DSC3, Accession

NP_001932.1) is another GAM7052 target gene, herein designated TARGET GENE. DSC3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DSC3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DSC3 BINDING SITE, designated SEQ ID:9847, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49005] Another function of GAM7052 is therefore inhibition of Desmocollin 3 (DSC3, Accession NP_001932.1), a gene which is a component of intercellular desmosome junctions. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DSC3.

[49006] The function of DSC3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Dual-specificity tyrosine-(y)-phosphorylation regulated kinase 1a (DYRK1A, Accession NP_567824.1) is another GAM7052 target gene, herein designated TARGET GENE. DYRK1A BINDING SITE is a target binding site found

in the 5` untranslated region of multiple transcripts of mRNA encoded by DYRK1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DYRK1A BINDING SITE, designated SEQ ID:17441, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49007] Another function of GAM7052 is therefore inhibition of Dual-specificity tyrosine-(y)-phosphorylation regulated kinase 1a (DYRK1A, Accession NP_567824.1), a gene which regulates cell proliferation and may be involved in brain development . and therefore may be associated with Down syndrome. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of Down syndrome, and of other diseases and clinical conditions associated with DYRK1A.

[49008] The function of DYRK1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.EDEM (Accession NP_055489.1) is another GAM7052 target gene, herein designated TARGET GENE. EDEM BINDING SITE is a target binding site found in the 3`

untranslated region of mRNA encoded by EDEM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EDEM BINDING SITE, designated SEQ ID:12749, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49009] Another function of GAM7052 is therefore inhibition of EDEM (Accession NP_055489.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EDEM.

[49010] EEF2K (Accession NP_037434.1) is another GAM7052 target gene, herein designated TARGET GENE. EEF2K BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by EEF2K, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EEF2K BINDING SITE, designated SEQ ID:13359, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49011] Another function of GAM7052 is therefore inhibition of EEF2K (Accession NP_037434.1), a gene which phospho-

rylates serine or threonine on the eukaryotic elongation factor- 2 and therefore may be associated with Systemic lupus erythematosus and cancer. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of Systemic lupus erythematosus and cancer, and of other diseases and clinical conditions associated with EEF2K.

[49012] The function of EEF2K and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Early growth response 1 (EGR1, Accession NP_001955.1) is another GAM7052 target gene, herein designated TARGET GENE. EGR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by EGR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EGR1 BINDING SITE, designated SEQ ID:10941, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49013] Another function of GAM7052 is therefore inhibition of Early growth response 1 (EGR1, Accession NP_001955.1) . Accordingly, utilities of GAM7052 include diagnosis, pre-

vention and treatment of diseases and clinical conditions associated with EGR1.

[49014] Eh-domain containing 2 (EHD2, Accession NP_055416.2) is another GAM7052 target gene, herein designated TARGET GENE. EHD2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by EHD2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EHD2 BINDING SITE, designated SEQ ID:10698, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49015] Another function of GAM7052 is therefore inhibition of Eh-domain containing 2 (EHD2, Accession NP_055416.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EHD2.

[49016] ELP3 (Accession NP_060561.3) is another GAM7052 target gene, herein designated TARGET GENE. ELP3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ELP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of ELP3 BINDING SITE, designated SEQ ID:8011, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49017] Another function of GAM7052 is therefore inhibition of ELP3 (Accession NP_060561.3) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ELP3.

[49018] Endothelial cell-specific molecule 1 (ESM1, Accession NP_008967.1) is another GAM7052 target gene, herein designated TARGET GENE. ESM1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ESM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ESM1 BINDING SITE, designated SEQ ID:1018, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49019] Another function of GAM7052 is therefore inhibition of Endothelial cell-specific molecule 1 (ESM1, Accession NP_008967.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with ESM1.

[49020] ET(B)R-LP-2 (Accession NP_004758.2) is another GAM7052 target gene, herein designated TARGET GENE. ET(B)R-LP-2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ET(B)R-LP-2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ET(B)R-LP-2 BINDING SITE, designated SEQ ID:9691, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49021] Another function of GAM7052 is therefore inhibition of ET(B)R-LP-2 (Accession NP_004758.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ET(B)R-LP-2.

[49022] F11R (Accession NP_653086.1) is another GAM7052 target gene, herein designated TARGET GENE. F11R BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by F11R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4

illustrates the complementarity of the nucleotide sequences of F11R BINDING SITE, designated SEQ ID:9554, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49023] Another function of GAM7052 is therefore inhibition of F11R (Accession NP_653086.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with F11R.

[49024] F11R (Accession NP_653085.1) is another GAM7052 target gene, herein designated TARGET GENE. F11R BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by F11R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of F11R BINDING SITE, designated SEQ ID:9554, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49025] Another function of GAM7052 is therefore inhibition of F11R (Accession NP_653085.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with F11R.

[49026] F11R (Accession NP_653087.1) is another GAM7052 tar-

get gene, herein designated TARGET GENE. F11R BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by F11R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of F11R BINDING SITE, designated SEQ ID:9554, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49027] Another function of GAM7052 is therefore inhibition of F11R (Accession NP_653087.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with F11R.

[49028] F11R (Accession NP_058642.1) is another GAM7052 target gene, herein designated TARGET GENE. F11R BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by F11R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of F11R BINDING SITE, designated SEQ ID:9554, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49029] Another function of GAM7052 is therefore inhibition of F11R (Accession NP_058642.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with F11R.

[49030] Coagulation factor ii (thrombin) receptor-like 2 (F2RL2, Accession NP_004092.1) is another GAM7052 target gene, herein designated TARGET GENE. F2RL2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by F2RL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of F2RL2 BINDING SITE, designated SEQ ID:6476, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49031] Another function of GAM7052 is therefore inhibition of Coagulation factor ii (thrombin) receptor-like 2 (F2RL2, Accession NP_004092.1), a gene which receptor for activated thrombin coupled to g proteins that stimulate phosphoinositide hydrolysis. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with F2RL2.

[49032] The function of F2RL2 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Coagulation factor iii (thromboplastin, tissue factor) (F3, Accession NP_001984.1) is another GAM7052 target gene, herein designated TARGET GENE. F3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by F3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of F3 BINDING SITE, designated SEQ ID:14740, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49033] Another function of GAM7052 is therefore inhibition of Coagulation factor iii (thromboplastin, tissue factor) (F3, Accession NP_001984.1), a gene which functions in normal hemostasis. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with F3.

[49034] The function of F3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Fatty acid binding protein 2, intestinal

(FABP2, Accession NP_000125.1) is another GAM7052 target gene, herein designated TARGET GENE. FABP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FABP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FABP2 BINDING SITE, designated SEQ ID:17010, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49035] Another function of GAM7052 is therefore inhibition of Fatty acid binding protein 2, intestinal (FABP2, Accession NP_000125.1), a gene which may have a role in dietary fat uptake or processing. and therefore may be associated with Cardiovascular disease and type 2 diabetes. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of Cardiovascular disease and type 2 diabetes., and of other diseases and clinical conditions associated with FABP2.

[49036] The function of FABP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Fanconi anemia, complementation group e

(FANCE, Accession NP_068741.1) is another GAM7052 target gene, herein designated TARGET GENE. FANCE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FANCE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FANCE BINDING SITE, designated SEQ ID:1495, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49037] Another function of GAM7052 is therefore inhibition of Fanconi anemia, complementation group e (FANCE, Accession NP_068741.1), a gene which is a possible regulator of lymphocyte and platelet function. and therefore is associated with Fanconi anemia, complementation group e. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of Fanconi anemia, complementation group e., and of other diseases and clinical conditions associated with FANCE.

[49038] The function of FANCE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Fanconi anemia, complementation group f

(FANCF, Accession NP_073562.1) is another GAM7052 target gene, herein designated TARGET GENE. FANCF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FANCF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FANCF BINDING SITE, designated SEQ ID:13765, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49039] Another function of GAM7052 is therefore inhibition of Fanconi anemia, complementation group f (FANCF, Accession NP_073562.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FANCF.

[49040] F-box only protein 32 (FBXO32, Accession NP_478136.1) is another GAM7052 target gene, herein designated TARGET GENE. FBXO32 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FBXO32, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FBXO32 BINDING

SITE, designated SEQ ID:4134, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49041] Another function of GAM7052 is therefore inhibition of F-box only protein 32 (FBXO32, Accession NP_478136.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FBXO32.

[49042] F-box only protein 32 (FBXO32, Accession NP_680482.1) is another GAM7052 target gene, herein designated TARGET GENE. FBXO32 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FBXO32, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FBXO32 BINDING SITE, designated SEQ ID:4134, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49043] Another function of GAM7052 is therefore inhibition of F-box only protein 32 (FBXO32, Accession NP_680482.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions

associated with FBXO32.

[49044] FBXW8 (Accession NP_699179.2) is another GAM7052 target gene, herein designated TARGET GENE. FBXW8 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FBXW8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FBXW8 BINDING SITE, designated SEQ ID:8434, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49045] Another function of GAM7052 is therefore inhibition of FBXW8 (Accession NP_699179.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FBXW8.

[49046] FBXW8 (Accession NP_036306.1) is another GAM7052 target gene, herein designated TARGET GENE. FBXW8 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FBXW8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of FBXW8 BINDING SITE, designated SEQ ID:8434, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49047] Another function of GAM7052 is therefore inhibition of FBXW8 (Accession NP_036306.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FBXW8.

[49048] Fc fragment of igg, low affinity iia, receptor for (cd32) (FCGR2A, Accession NP_067674.1) is another GAM7052 target gene, herein designated TARGET GENE. FCGR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FCGR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FCGR2A BINDING SITE, designated SEQ ID:6966, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49049] Another function of GAM7052 is therefore inhibition of Fc fragment of igg, low affinity iia, receptor for (cd32) (FCGR2A, Accession NP_067674.1), a gene which binds IgG immune complexes; member of the immunoglobulin

superfamily. and therefore may be associated with Lupus nephritis. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of Lupus nephritis., and of other diseases and clinical conditions associated with FCGR2A.

[49050] The function of FCGR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.FCRH1 (Accession NP_443170.1) is another GAM7052 target gene, herein designated TARGET GENE. FCRH1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FCRH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FCRH1 BINDING SITE, designated SEQ ID:6123, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49051] Another function of GAM7052 is therefore inhibition of FCRH1 (Accession NP_443170.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FCRH1.

[49052] Fer-1-like 4 (c. elegans) (FER1L4, Accession XP_300246.1)

is another GAM7052 target gene, herein designated TARGET GENE. FER1L4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FER1L4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FER1L4 BINDING SITE, designated SEQ ID:20036, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49053] Another function of GAM7052 is therefore inhibition of Fer-1-like 4 (c. elegans) (FER1L4, Accession XP_300246.1). Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FER1L4.

[49054] Fer-1-like 4 (c. elegans) (FER1L4, Accession XP_300246.1) is another GAM7052 target gene, herein designated TARGET GENE. FER1L4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FER1L4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FER1L4 BINDING SITE, designated

SEQ ID:20036, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49055] Another function of GAM7052 is therefore inhibition of Fer-1-like 4 (c. elegans) (FER1L4, Accession XP_300246.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FER1L4.

[49056] Fasciculation and elongation protein zeta 1 (zygin i) (FEZ1, Accession NP_072043.1) is another GAM7052 target gene, herein designated TARGET GENE. FEZ1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FEZ1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FEZ1 BINDING SITE, designated SEQ ID:4759, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49057] Another function of GAM7052 is therefore inhibition of Fasciculation and elongation protein zeta 1 (zygin i) (FEZ1, Accession NP_072043.1), a gene which Zygin 1; may have a role in axonal outgrowth; has similarity to C. elegans

UNC- 76. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FEZ1.

[49058] The function of FEZ1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Fibroblast growth factor 5 (FGF5, Accession NP_149134.1) is another GAM7052 target gene, herein designated TARGET GENE. FGF5 BINDING SITE1 and FGF5 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by FGF5, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGF5 BINDING SITE1 and FGF5 BINDING SITE2, designated SEQ ID:14043 and SEQ ID:17245 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49059] Another function of GAM7052 is therefore inhibition of Fibroblast growth factor 5 (FGF5, Accession NP_149134.1), a gene which induces transformation and may regulate neuronal differentiation. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases

and clinical conditions associated with FGF5.

[49060] The function of FGF5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM106.1.Fibroblast growth factor 5 (FGF5, Accession NP_004455.1) is another GAM7052 target gene, herein designated TARGET GENE. FGF5 BINDING SITE1 and FGF5 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by FGF5, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGF5 BINDING SITE1 and FGF5 BINDING SITE2, designated SEQ ID:17245 and SEQ ID:14043 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49061] Another function of GAM7052 is therefore inhibition of Fibroblast growth factor 5 (FGF5, Accession NP_004455.1), a gene which induces transformation and may regulate neuronal differentiation. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGF5.

[49062] The function of FGF5 and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM106.1.FLJ10232 (Accession NP_060503.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ10232 BINDING SITE1 and FLJ10232 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ10232, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10232 BINDING SITE1 and FLJ10232 BINDING SITE2, designated SEQ ID:6964 and SEQ ID:15854 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49063] Another function of GAM7052 is therefore inhibition of FLJ10232 (Accession NP_060503.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10232.

[49064] FLJ10346 (Accession NP_060535.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ10346 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ10346, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10346 BINDING SITE, designated SEQ ID:14573, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49065] Another function of GAM7052 is therefore inhibition of FLJ10346 (Accession NP_060535.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10346.

[49066] FLJ10560 (Accession NP_060608.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ10560 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10560, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10560 BINDING SITE, designated SEQ ID:9847, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49067] Another function of GAM7052 is therefore inhibition of FLJ10560 (Accession NP_060608.1) . Accordingly, utilities

of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10560.

[49068] FLJ10613 (Accession NP_061940.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ10613 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10613, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10613 BINDING SITE, designated SEQ ID:3913, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49069] Another function of GAM7052 is therefore inhibition of FLJ10613 (Accession NP_061940.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10613.

[49070] FLJ10620 (Accession NP_060627.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ10620 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10620, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10620 BINDING SITE, designated SEQ ID:8748, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49071] Another function of GAM7052 is therefore inhibition of FLJ10620 (Accession NP_060627.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10620.

[49072] FLJ10640 (Accession NP_061896.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ10640 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ10640, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10640 BINDING SITE, designated SEQ ID:9332, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49073] Another function of GAM7052 is therefore inhibition of FLJ10640 (Accession NP_061896.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ10640.

[49074] FLJ10847 (Accession NP_060712.2) is another GAM7052 target gene, herein designated TARGET GENE. FLJ10847 BINDING SITE1 and FLJ10847 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ10847, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10847 BINDING SITE1 and FLJ10847 BINDING SITE2, designated SEQ ID:19185 and SEQ ID:16146 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49075] Another function of GAM7052 is therefore inhibition of FLJ10847 (Accession NP_060712.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10847.

[49076] FLJ10901 (Accession NP_060735.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ10901 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10901, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10901 BINDING SITE, designated SEQ ID:1578, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49077] Another function of GAM7052 is therefore inhibition of FLJ10901 (Accession NP_060735.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10901.

[49078] FLJ10922 (Accession NP_060743.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ10922 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10922, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10922 BINDING SITE, designated SEQ ID:857, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49079] Another function of GAM7052 is therefore inhibition of FLJ10922 (Accession NP_060743.1) . Accordingly, utilities

of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10922.

[49080] FLJ11467 (Accession NP_079239.2) is another GAM7052 target gene, herein designated TARGET GENE. FLJ11467 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ11467, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11467 BINDING SITE, designated SEQ ID:18821, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49081] Another function of GAM7052 is therefore inhibition of FLJ11467 (Accession NP_079239.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11467.

[49082] FLJ11827 (Accession NP_079369.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ11827 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ11827, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11827 BINDING SITE, designated SEQ ID:11535, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49083] Another function of GAM7052 is therefore inhibition of FLJ11827 (Accession NP_079369.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11827.

[49084] FLJ12363 (Accession NP_115543.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ12363 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12363, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12363 BINDING SITE, designated SEQ ID:8012, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49085] Another function of GAM7052 is therefore inhibition of FLJ12363 (Accession NP_115543.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ12363.

[49086] FLJ12572 (Accession NP_075056.2) is another GAM7052 target gene, herein designated TARGET GENE. FLJ12572 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12572, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12572 BINDING SITE, designated SEQ ID:1348, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49087] Another function of GAM7052 is therefore inhibition of FLJ12572 (Accession NP_075056.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12572.

[49088] FLJ12649 (Accession XP_291344.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ12649 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12649, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ12649 BINDING SITE, designated SEQ ID:10699, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49089] Another function of GAM7052 is therefore inhibition of FLJ12649 (Accession XP_291344.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12649.

[49090] FLJ12747 (Accession XP_290972.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ12747 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12747, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12747 BINDING SITE, designated SEQ ID:2107, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49091] Another function of GAM7052 is therefore inhibition of FLJ12747 (Accession XP_290972.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ12747.

[49092] FLJ12787 (Accession NP_115551.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ12787 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12787, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12787 BINDING SITE, designated SEQ ID:9691, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49093] Another function of GAM7052 is therefore inhibition of FLJ12787 (Accession NP_115551.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12787.

[49094] FLJ12903 (Accession NP_073590.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ12903 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12903, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ12903 BINDING SITE, designated SEQ ID:17852, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49095] Another function of GAM7052 is therefore inhibition of FLJ12903 (Accession NP_073590.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12903.

[49096] FLJ12973 (Accession NP_079184.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ12973 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12973, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12973 BINDING SITE, designated SEQ ID:13360, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49097] Another function of GAM7052 is therefore inhibition of FLJ12973 (Accession NP_079184.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12973.

[49098] FLJ13072 (Accession XP_117117.2) is another GAM7052 target gene, herein designated TARGET GENE. FLJ13072 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13072, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13072 BINDING SITE, designated SEQ ID:16722, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49099] Another function of GAM7052 is therefore inhibition of FLJ13072 (Accession XP_117117.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13072.

[49100] FLJ13171 (Accession NP_076412.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ13171 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ13171, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13171 BINDING SITE, designated SEQ ID:10344, to the

nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49101] Another function of GAM7052 is therefore inhibition of FLJ13171 (Accession NP_076412.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13171.

[49102] FLJ13188 (Accession NP_071346.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ13188 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13188, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13188 BINDING SITE, designated SEQ ID:11689, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49103] Another function of GAM7052 is therefore inhibition of FLJ13188 (Accession NP_071346.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13188.

[49104] FLJ13204 (Accession NP_079037.2) is another GAM7052

target gene, herein designated TARGET GENE. FLJ13204 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13204, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13204 BINDING SITE, designated SEQ ID:7003, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49105] Another function of GAM7052 is therefore inhibition of FLJ13204 (Accession NP_079037.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13204.

[49106] FLJ14442 (Accession NP_116174.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ14442 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ14442, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14442 BINDING SITE, designated SEQ ID:9691, to the nucleotide sequence of GAM7052 RNA, herein designated

GAM RNA, also designated SEQ ID:296.

[49107] Another function of GAM7052 is therefore inhibition of FLJ14442 (Accession NP_116174.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14442.

[49108] FLJ14803 (Accession NP_116231.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ14803 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ14803, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14803 BINDING SITE, designated SEQ ID:7216, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49109] Another function of GAM7052 is therefore inhibition of FLJ14803 (Accession NP_116231.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14803.

[49110] FLJ20045 (Accession NP_060108.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ20045

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20045, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20045 BINDING SITE, designated SEQ ID:5969, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49111] Another function of GAM7052 is therefore inhibition of FLJ20045 (Accession NP_060108.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20045.

[49112] FLJ20079 (Accession NP_060126.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ20079 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20079, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20079 BINDING SITE, designated SEQ ID:17687, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49113] Another function of GAM7052 is therefore inhibition of FLJ20079 (Accession NP_060126.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20079.

[49114] FLJ20136 (Accession NP_060154.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ20136 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20136, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20136 BINDING SITE, designated SEQ ID:9023, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49115] Another function of GAM7052 is therefore inhibition of FLJ20136 (Accession NP_060154.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20136.

[49116] FLJ20245 (Accession NP_060193.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ20245 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by FLJ20245, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20245 BINDING SITE, designated SEQ ID:12481, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49117] Another function of GAM7052 is therefore inhibition of FLJ20245 (Accession NP_060193.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20245.

[49118] FLJ20276 (Accession NP_060208.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ20276 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20276, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20276 BINDING SITE, designated SEQ ID:14443, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49119] Another function of GAM7052 is therefore inhibition of

FLJ20276 (Accession NP_060208.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20276.

[49120] FLJ20507 (Accession NP_060319.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ20507 BINDING SITE1 and FLJ20507 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ20507, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20507 BINDING SITE1 and FLJ20507 BINDING SITE2, designated SEQ ID:16723 and SEQ ID:3913 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49121] Another function of GAM7052 is therefore inhibition of FLJ20507 (Accession NP_060319.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20507.

[49122] FLJ20511 (Accession NP_060323.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ20511

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20511, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20511 BINDING SITE, designated SEQ ID:9847, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49123] Another function of GAM7052 is therefore inhibition of FLJ20511 (Accession NP_060323.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20511.

[49124] FLJ21865 (Accession NP_073596.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ21865 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ21865, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ21865 BINDING SITE, designated SEQ ID:3914, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49125] Another function of GAM7052 is therefore inhibition of FLJ21865 (Accession NP_073596.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ21865.

[49126] FLJ22531 (Accession NP_078926.2) is another GAM7052 target gene, herein designated TARGET GENE. FLJ22531 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ22531, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22531 BINDING SITE, designated SEQ ID:7027, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49127] Another function of GAM7052 is therefore inhibition of FLJ22531 (Accession NP_078926.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22531.

[49128] FLJ22593 (Accession NP_078979.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ22593 BINDING SITE is a target binding site found in the 5` un-

translated region of mRNA encoded by FLJ22593, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22593 BINDING SITE, designated SEQ ID:8875, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49129] Another function of GAM7052 is therefore inhibition of FLJ22593 (Accession NP_078979.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22593.

[49130] FLJ22679 (Accession NP_115603.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ22679 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FLJ22679, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22679 BINDING SITE, designated SEQ ID:19747, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49131] Another function of GAM7052 is therefore inhibition of FLJ22679 (Accession NP_115603.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22679.

[49132] FLJ22679 (Accession NP_060168.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ22679 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FLJ22679, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22679 BINDING SITE, designated SEQ ID:19747, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49133] Another function of GAM7052 is therefore inhibition of FLJ22679 (Accession NP_060168.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22679.

[49134] FLJ22794 (Accession NP_071357.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ22794

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ22794, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22794 BINDING SITE, designated SEQ ID:9450, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49135] Another function of GAM7052 is therefore inhibition of FLJ22794 (Accession NP_071357.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22794.

[49136] FLJ22965 (Accession NP_071384.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ22965 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ22965, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22965 BINDING SITE, designated SEQ ID:2108, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49137] Another function of GAM7052 is therefore inhibition of FLJ22965 (Accession NP_071384.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22965.

[49138] FLJ23024 (Accession NP_079212.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ23024 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23024, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23024 BINDING SITE, designated SEQ ID:14741, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49139] Another function of GAM7052 is therefore inhibition of FLJ23024 (Accession NP_079212.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23024.

[49140] FLJ23151 (Accession NP_079048.2) is another GAM7052 target gene, herein designated TARGET GENE. FLJ23151 BINDING SITE is a target binding site found in the 5` un-

translated region of mRNA encoded by FLJ23151, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23151 BINDING SITE, designated SEQ ID:6505, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49141] Another function of GAM7052 is therefore inhibition of FLJ23151 (Accession NP_079048.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23151.

[49142] FLJ23392 (Accession NP_079060.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ23392 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23392, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23392 BINDING SITE, designated SEQ ID:18508, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49143] Another function of GAM7052 is therefore inhibition of

FLJ23392 (Accession NP_079060.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23392.

[49144] FLJ23416 (Accession NP_115614.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ23416 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23416, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23416 BINDING SITE, designated SEQ ID:1770, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49145] Another function of GAM7052 is therefore inhibition of FLJ23416 (Accession NP_115614.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23416.

[49146] FLJ23556 (Accession NP_079156.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ23556 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23556, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23556 BINDING SITE, designated SEQ ID:19274, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49147] Another function of GAM7052 is therefore inhibition of FLJ23556 (Accession NP_079156.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23556.

[49148] FLJ23563 (Accession XP_041701.4) is another GAM7052 target gene, herein designated TARGET GENE. FLJ23563 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23563, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23563 BINDING SITE, designated SEQ ID:3638, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49149] Another function of GAM7052 is therefore inhibition of FLJ23563 (Accession XP_041701.4) . Accordingly, utilities

of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23563.

[49150] FLJ25033 (Accession NP_689779.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ25033 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ25033, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ25033 BINDING SITE, designated SEQ ID:1524, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49151] Another function of GAM7052 is therefore inhibition of FLJ25033 (Accession NP_689779.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ25033.

[49152] FLJ25067 (Accession NP_689717.2) is another GAM7052 target gene, herein designated TARGET GENE. FLJ25067 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ25067, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ25067 BINDING SITE, designated SEQ ID:16676, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49153] Another function of GAM7052 is therefore inhibition of FLJ25067 (Accession NP_689717.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ25067.

[49154] FLJ25429 (Accession NP_689589.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ25429 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ25429, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ25429 BINDING SITE, designated SEQ ID:12652, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49155] Another function of GAM7052 is therefore inhibition of FLJ25429 (Accession NP_689589.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ25429.

[49156] FLJ25795 (Accession NP_689633.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ25795 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ25795, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ25795 BINDING SITE, designated SEQ ID:11825, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49157] Another function of GAM7052 is therefore inhibition of FLJ25795 (Accession NP_689633.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ25795.

[49158] FLJ30507 (Accession NP_694555.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ30507 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ30507, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ30507 BINDING SITE, designated SEQ ID:6534, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49159] Another function of GAM7052 is therefore inhibition of FLJ30507 (Accession NP_694555.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ30507.

[49160] FLJ30532 (Accession NP_653325.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ30532 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ30532, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ30532 BINDING SITE, designated SEQ ID:4754, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49161] Another function of GAM7052 is therefore inhibition of FLJ30532 (Accession NP_653325.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ30532.

[49162] FLJ31139 (Accession NP_775928.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ31139 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ31139, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31139 BINDING SITE, designated SEQ ID:16723, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49163] Another function of GAM7052 is therefore inhibition of FLJ31139 (Accession NP_775928.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31139.

[49164] FLJ31338 (Accession NP_689682.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ31338 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ31338, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ31338 BINDING SITE, designated SEQ ID:13983, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49165] Another function of GAM7052 is therefore inhibition of FLJ31338 (Accession NP_689682.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31338.

[49166] FLJ31393 (Accession NP_694569.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ31393 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ31393, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31393 BINDING SITE, designated SEQ ID:4686, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49167] Another function of GAM7052 is therefore inhibition of FLJ31393 (Accession NP_694569.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31393.

[49168] FLJ31958 (Accession NP_694575.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ31958 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ31958, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31958 BINDING SITE, designated SEQ ID:18462, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49169] Another function of GAM7052 is therefore inhibition of FLJ31958 (Accession NP_694575.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31958.

[49170] FLJ32096 (Accession NP_776156.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ32096 BINDING SITE1 and FLJ32096 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ32096, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32096 BINDING SITE1 and

FLJ32096 BINDING SITE2, designated SEQ ID:12527 and SEQ ID:1832 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49171] Another function of GAM7052 is therefore inhibition of FLJ32096 (Accession NP_776156.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32096.

[49172] FLJ32130 (Accession NP_689671.2) is another GAM7052 target gene, herein designated TARGET GENE. FLJ32130 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32130, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32130 BINDING SITE, designated SEQ ID:14068, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49173] Another function of GAM7052 is therefore inhibition of FLJ32130 (Accession NP_689671.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ32130.

[49174] FLJ32803 (Accession NP_694584.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ32803 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32803, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32803 BINDING SITE, designated SEQ ID:702, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49175] Another function of GAM7052 is therefore inhibition of FLJ32803 (Accession NP_694584.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32803.

[49176] FLJ32865 (Accession NP_653214.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ32865 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32865, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ32865 BINDING SITE, designated SEQ ID:16885, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49177] Another function of GAM7052 is therefore inhibition of FLJ32865 (Accession NP_653214.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32865.

[49178] FLJ33655 (Accession NP_775912.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ33655 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ33655, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ33655 BINDING SITE, designated SEQ ID:19276, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49179] Another function of GAM7052 is therefore inhibition of FLJ33655 (Accession NP_775912.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ33655.

[49180] FLJ33814 (Accession NP_775781.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ33814 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ33814, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ33814 BINDING SITE, designated SEQ ID:13609, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49181] Another function of GAM7052 is therefore inhibition of FLJ33814 (Accession NP_775781.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ33814.

[49182] FLJ34817 (Accession NP_689516.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ34817 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ34817, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ34817 BINDING SITE, designated SEQ ID:5119, to the

nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49183] Another function of GAM7052 is therefore inhibition of FLJ34817 (Accession NP_689516.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ34817.

[49184] FLJ34922 (Accession NP_689483.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ34922 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ34922, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ34922 BINDING SITE, designated SEQ ID:11941, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49185] Another function of GAM7052 is therefore inhibition of FLJ34922 (Accession NP_689483.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ34922.

[49186] FLJ34969 (Accession XP_114353.1) is another GAM7052

target gene, herein designated TARGET GENE. FLJ34969 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ34969, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ34969 BINDING SITE, designated SEQ ID:6275, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49187] Another function of GAM7052 is therefore inhibition of FLJ34969 (Accession XP_114353.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ34969.

[49188] FLJ35105 (Accession NP_689890.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ35105 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ35105, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ35105 BINDING SITE, designated SEQ ID:6938, to the nucleotide sequence of GAM7052 RNA, herein designated

GAM RNA, also designated SEQ ID:296.

[49189] Another function of GAM7052 is therefore inhibition of FLJ35105 (Accession NP_689890.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ35105.

[49190] FLJ36445 (Accession NP_694965.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ36445 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ36445, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ36445 BINDING SITE, designated SEQ ID:9024, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49191] Another function of GAM7052 is therefore inhibition of FLJ36445 (Accession NP_694965.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ36445.

[49192] FLJ37078 (Accession NP_694588.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ37078

BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ37078, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ37078 BINDING SITE, designated SEQ ID:15855, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49193] Another function of GAM7052 is therefore inhibition of FLJ37078 (Accession NP_694588.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ37078.

[49194] FLJ37433 (Accession NP_848612.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ37433 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ37433, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ37433 BINDING SITE, designated SEQ ID:4384, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49195] Another function of GAM7052 is therefore inhibition of FLJ37433 (Accession NP_848612.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ37433.

[49196] FLJ37543 (Accession NP_775938.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ37543 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ37543, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ37543 BINDING SITE, designated SEQ ID:17646, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49197] Another function of GAM7052 is therefore inhibition of FLJ37543 (Accession NP_775938.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ37543.

[49198] FLJ38101 (Accession NP_694993.2) is another GAM7052 target gene, herein designated TARGET GENE. FLJ38101 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by FLJ38101, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38101 BINDING SITE, designated SEQ ID:1941, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49199] Another function of GAM7052 is therefore inhibition of FLJ38101 (Accession NP_694993.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38101.

[49200] FLJ38149 (Accession XP_091919.5) is another GAM7052 target gene, herein designated TARGET GENE. FLJ38149 BINDING SITE1 and FLJ38149 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ38149, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38149 BINDING SITE1 and FLJ38149 BINDING SITE2, designated SEQ ID:15374 and SEQ ID:14014 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:296.

[49201] Another function of GAM7052 is therefore inhibition of FLJ38149 (Accession XP_091919.5) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38149.

[49202] FLJ38281 (Accession NP_689814.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ38281 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ38281, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38281 BINDING SITE, designated SEQ ID:7430, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49203] Another function of GAM7052 is therefore inhibition of FLJ38281 (Accession NP_689814.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38281.

[49204] FLJ38607 (Accession NP_689867.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ38607

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ38607, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38607 BINDING SITE, designated SEQ ID:8761, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49205] Another function of GAM7052 is therefore inhibition of FLJ38607 (Accession NP_689867.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38607.

[49206] FLJ38716 (Accession NP_689580.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ38716 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ38716, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38716 BINDING SITE, designated SEQ ID:10312, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49207] Another function of GAM7052 is therefore inhibition of FLJ38716 (Accession NP_689580.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38716.

[49208] FLJ38723 (Accession NP_776166.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ38723 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ38723, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38723 BINDING SITE, designated SEQ ID:7203, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49209] Another function of GAM7052 is therefore inhibition of FLJ38723 (Accession NP_776166.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38723.

[49210] FLJ38819 (Accession NP_665872.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ38819 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by FLJ38819, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38819 BINDING SITE, designated SEQ ID:5470, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49211] Another function of GAM7052 is therefore inhibition of FLJ38819 (Accession NP_665872.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38819.

[49212] FLJ38991 (Accession NP_776188.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ38991 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ38991, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38991 BINDING SITE, designated SEQ ID:16971, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49213] Another function of GAM7052 is therefore inhibition of

FLJ38991 (Accession NP_776188.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38991.

[49214] FLJ39058 (Accession NP_775851.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ39058 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ39058, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ39058 BINDING SITE, designated SEQ ID:4759, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49215] Another function of GAM7052 is therefore inhibition of FLJ39058 (Accession NP_775851.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ39058.

[49216] FLJ39075 (Accession NP_689553.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ39075 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ39075, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ39075 BINDING SITE, designated SEQ ID:6073, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49217] Another function of GAM7052 is therefore inhibition of FLJ39075 (Accession NP_689553.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ39075.

[49218] FLJ39599 (Accession NP_776164.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ39599 BINDING SITE1 and FLJ39599 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ39599, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ39599 BINDING SITE1 and FLJ39599 BINDING SITE2, designated SEQ ID:3756 and SEQ ID:2431 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49219] Another function of GAM7052 is therefore inhibition of FLJ39599 (Accession NP_776164.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ39599.

[49220] FLJ39639 (Accession XP_290687.1) is another GAM7052 target gene, herein designated TARGET GENE. FLJ39639 BINDING SITE1 and FLJ39639 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ39639, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ39639 BINDING SITE1 and FLJ39639 BINDING SITE2, designated SEQ ID:14740 and SEQ ID:8837 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49221] Another function of GAM7052 is therefore inhibition of FLJ39639 (Accession XP_290687.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ39639.

[49222] FLJ39821 (Accession NP_775971.1) is another GAM7052

target gene, herein designated TARGET GENE. FLJ39821 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ39821, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ39821 BINDING SITE, designated SEQ ID:648, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49223] Another function of GAM7052 is therefore inhibition of FLJ39821 (Accession NP_775971.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ39821.

[49224] Fucosyltransferase 1 (galactoside 2-alpha-l-fucosyltransferase, bombay phenotype included) (FUT1, Accession NP_000139.1) is another GAM7052 target gene, herein designated TARGET GENE. FUT1 BINDING SITE1 and FUT1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FUT1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of FUT1 BINDING SITE1 and FUT1 BINDING SITE2, designated SEQ ID:9847 and SEQ ID:16237 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49225] Another function of GAM7052 is therefore inhibition of Fucosyltransferase 1 (galactoside 2-alpha-l-fucosyltransferase, bombay phenotype included) (FUT1, Accession NP_000139.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FUT1.

[49226] G2A (Accession NP_037477.1) is another GAM7052 target gene, herein designated TARGET GENE. G2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by G2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of G2A BINDING SITE, designated SEQ ID:4759, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49227] Another function of GAM7052 is therefore inhibition of

G2A (Accession NP_037477.1), a gene which may mediate some of the effects of extracellular atp on insulin secretion. and therefore may be associated with Autoimmune disease. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of Autoimmune disease., and of other diseases and clinical conditions associated with G2A.

[49228] The function of G2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Glial fibrillary acidic protein (GFAP, Accession NP_002046.1) is another GAM7052 target gene, herein designated TARGET GENE. GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GFAP BINDING SITE, designated SEQ ID:18063, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49229] Another function of GAM7052 is therefore inhibition of Glial fibrillary acidic protein (GFAP, Accession

NP_002046.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GFAP.

[49230] Growth factor, augmenter of liver regeneration (erv1 homolog, s. cerevisiae) (GFER, Accession NP_005253.2) is another GAM7052 target gene, herein designated TARGET GENE. GFER BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFER, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GFER BINDING SITE, designated SEQ ID:1984, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49231] Another function of GAM7052 is therefore inhibition of Growth factor, augmenter of liver regeneration (erv1 homolog, s. cerevisiae) (GFER, Accession NP_005253.2), a gene which has a function in liver regeneration and spermatogenesis (by similarity). Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GFER.

[49232] The function of GFER and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM385.2.Golgi associated, gamma adaptin ear containing, arf binding protein 2 (GGA2, Accession NP_619581.1) is another GAM7052 target gene, herein designated TARGET GENE. GGA2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by GGA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GGA2 BINDING SITE, designated SEQ ID:15132, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49233] Another function of GAM7052 is therefore inhibition of Golgi associated, gamma adaptin ear containing, arf binding protein 2 (GGA2, Accession NP_619581.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GGA2.

[49234] Golgi associated, gamma adaptin ear containing, arf binding protein 2 (GGA2, Accession NP_055859.1) is another GAM7052 target gene, herein designated TARGET GENE. GGA2 BINDING SITE is a target binding site found in the

3` untranslated region of multiple transcripts of mRNA encoded by GGA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GGA2 BINDING SITE, designated SEQ ID:15132, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49235] Another function of GAM7052 is therefore inhibition of Golgi associated, gamma adaptin ear containing, arf binding protein 2 (GGA2, Accession NP_055859.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GGA2.

[49236] Growth hormone receptor (GHR, Accession NP_000154.1) is another GAM7052 target gene, herein designated TARGET GENE. GHR BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GHR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GHR BINDING SITE, designated SEQ ID:2927, to the nucleotide sequence of GAM7052 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:296.

[49237] Another function of GAM7052 is therefore inhibition of Growth hormone receptor (GHR, Accession NP_000154.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GHR.

[49238] GNE (Accession NP_005467.1) is another GAM7052 target gene, herein designated TARGET GENE. GNE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GNE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GNE BINDING SITE, designated SEQ ID:10442, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49239] Another function of GAM7052 is therefore inhibition of GNE (Accession NP_005467.1), a gene which has roles in sialic acid biosynthesis and regulates cell surface sialylation. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GNE.

[49240] The function of GNE and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Guanine nucleotide binding protein (g protein), gamma 4 (GNG4, Accession NP_004476.1) is another GAM7052 target gene, herein designated TARGET GENE. GNG4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GNG4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GNG4 BINDING SITE, designated SEQ ID:16886, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49241] Another function of GAM7052 is therefore inhibition of Guanine nucleotide binding protein (g protein), gamma 4 (GNG4, Accession NP_004476.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GNG4.

[49242] GNPNAT1 (Accession XP_085119.1) is another GAM7052 target gene, herein designated TARGET GENE. GNPNAT1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GNPNAT1, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GNPNAT1 BINDING SITE, designated SEQ ID:3158, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49243] Another function of GAM7052 is therefore inhibition of GNPNAT1 (Accession XP_085119.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GNPNAT1.

[49244] Golgi autoantigen, golgin subfamily a, 3 (GOLGA3, Accession NP_005886.2) is another GAM7052 target gene, herein designated TARGET GENE. GOLGA3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by GOLGA3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GOLGA3 BINDING SITE, designated SEQ ID:11625, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49245] Another function of GAM7052 is therefore inhibition of Golgi autoantigen, golgin subfamily a, 3 (GOLGA3, Acces-

sion NP_005886.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GOLGA3.

[49246] Glycoprotein v (platelet) (GP5, Accession NP_004479.1) is another GAM7052 target gene, herein designated TARGET GENE. GP5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GP5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GP5 BINDING SITE, designated SEQ ID:3078, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49247] Another function of GAM7052 is therefore inhibition of Glycoprotein v (platelet) (GP5, Accession NP_004479.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GP5.

[49248] G protein-coupled receptor 56 (GPR56, Accession NP_005673.2) is another GAM7052 target gene, herein designated TARGET GENE. GPR56 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by GPR56, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPR56 BINDING SITE, designated SEQ ID:3347, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49249] Another function of GAM7052 is therefore inhibition of G protein-coupled receptor 56 (GPR56, Accession NP_005673.2), a gene which transduces extracellular signals through heterotrimeric G proteins. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPR56.

[49250] The function of GPR56 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.GR6 (Accession NP_031380.1) is another GAM7052 target gene, herein designated TARGET GENE. GR6 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by GR6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

GR6 BINDING SITE, designated SEQ ID:14557, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49251] Another function of GAM7052 is therefore inhibition of GR6 (Accession NP_031380.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GR6.

[49252] General transcription factor iie, polypeptide 1, alpha 56kda (GTF2E1, Accession NP_005504.1) is another GAM7052 target gene, herein designated TARGET GENE. GTF2E1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GTF2E1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GTF2E1 BINDING SITE, designated SEQ ID:3032, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49253] Another function of GAM7052 is therefore inhibition of General transcription factor iie, polypeptide 1, alpha 56kda (GTF2E1, Accession NP_005504.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with GTF2E1.

[49254] GTPBG3 (Accession NP_116009.1) is another GAM7052 target gene, herein designated TARGET GENE. GTPBG3 BINDING SITE1 and GTPBG3 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by GTPBG3, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GTPBG3 BINDING SITE1 and GTPBG3 BINDING SITE2, designated SEQ ID:1434 and SEQ ID:16887 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49255] Another function of GAM7052 is therefore inhibition of GTPBG3 (Accession NP_116009.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GTPBG3.

[49256] GYLTL1B (Accession NP_689525.1) is another GAM7052 target gene, herein designated TARGET GENE. GYLTL1B BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by GYLTL1B, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GYLTL1B BINDING SITE, designated SEQ ID:14235, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49257] Another function of GAM7052 is therefore inhibition of GYLTL1B (Accession NP_689525.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GYLTL1B.

[49258] H-plk (Accession NP_056936.1) is another GAM7052 target gene, herein designated TARGET GENE. H-plk BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by H-plk, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of H-plk BINDING SITE, designated SEQ ID:5790, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49259] Another function of GAM7052 is therefore inhibition of H-plk (Accession NP_056936.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with H-plk.

[49260] H2AV (Accession NP_619541.1) is another GAM7052 target gene, herein designated TARGET GENE. H2AV BINDING SITE1 and H2AV BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by H2AV, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of H2AV BINDING SITE1 and H2AV BINDING SITE2, designated SEQ ID:9267 and SEQ ID:17174 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49261] Another function of GAM7052 is therefore inhibition of H2AV (Accession NP_619541.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with H2AV.

[49262] H63 (Accession NP_816929.1) is another GAM7052 target gene, herein designated TARGET GENE. H63 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by H63, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4

illustrates the complementarity of the nucleotide sequences of H63 BINDING SITE, designated SEQ ID:1187, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49263] Another function of GAM7052 is therefore inhibition of H63 (Accession NP_816929.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with H63.

[49264] H63 (Accession NP_612432.2) is another GAM7052 target gene, herein designated TARGET GENE. H63 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by H63, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of H63 BINDING SITE, designated SEQ ID:1187, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49265] Another function of GAM7052 is therefore inhibition of H63 (Accession NP_612432.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with H63.

[49266] Hepatitis a virus cellular receptor 2 (HAVCR2, Accession

NP_116171.2) is another GAM7052 target gene, herein designated TARGET GENE. HAVCR2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HAVCR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HAVCR2 BINDING SITE, designated SEQ ID:5471, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49267] Another function of GAM7052 is therefore inhibition of Hepatitis a virus cellular receptor 2 (HAVCR2, Accession NP_116171.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HAVCR2.

[49268] HBP17 (Accession NP_005121.1) is another GAM7052 target gene, herein designated TARGET GENE. HBP17 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HBP17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HBP17 BINDING SITE, designated SEQ ID:8507, to the nucleotide

sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49269] Another function of GAM7052 is therefore inhibition of HBP17 (Accession NP_005121.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HBP17.

[49270] Hypoxia inducible factor 3, alpha subunit (HIF3A, Accession NP_690009.1) is another GAM7052 target gene, herein designated TARGET GENE. HIF3A BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by HIF3A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HIF3A BINDING SITE, designated SEQ ID:4583, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49271] Another function of GAM7052 is therefore inhibition of Hypoxia inducible factor 3, alpha subunit (HIF3A, Accession NP_690009.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HIF3A.

[49272] Histamine receptor h4 (HRH4, Accession NP_067637.2) is

another GAM7052 target gene, herein designated TARGET GENE. HRH4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HRH4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HRH4 BINDING SITE, designated SEQ ID:10866, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49273] Another function of GAM7052 is therefore inhibition of Histamine receptor h4 (HRH4, Accession NP_067637.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HRH4.

[49274] Hydroxysteroid (17-beta) dehydrogenase 1 (HSD17B1, Accession NP_000404.1) is another GAM7052 target gene, herein designated TARGET GENE. HSD17B1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HSD17B1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSD17B1 BINDING SITE, designated SEQ ID:13157, to the nucleotide

sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49275] Another function of GAM7052 is therefore inhibition of Hydroxysteroid (17-beta) dehydrogenase 1 (HSD17B1, Accession NP_000404.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSD17B1.

[49276] HSMPP8 (Accession XP_167894.1) is another GAM7052 target gene, herein designated TARGET GENE. HSMPP8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HSMPP8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSMPP8 BINDING SITE, designated SEQ ID:5864, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49277] Another function of GAM7052 is therefore inhibition of HSMPP8 (Accession XP_167894.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSMPP8.

[49278] HSPC065 (Accession NP_054876.2) is another GAM7052

target gene, herein designated TARGET GENE. HSPC065 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HSPC065, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSPC065 BINDING SITE, designated SEQ ID:686, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49279] Another function of GAM7052 is therefore inhibition of HSPC065 (Accession NP_054876.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSPC065.

[49280] 5-hydroxytryptamine (serotonin) receptor 1e (HTR1E, Accession NP_000856.1) is another GAM7052 target gene, herein designated TARGET GENE. HTR1E BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HTR1E, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HTR1E BINDING SITE, designated SEQ ID:19389, to the nucleotide sequence of

GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49281] Another function of GAM7052 is therefore inhibition of 5-hydroxytryptamine (serotonin) receptor 1e (HTR1E, Accession NP_000856.1), a gene which belongs to g- protein coupled receptors. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HTR1E.

[49282] The function of HTR1E and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM161.1.Hus1 checkpoint homolog (s. pombe) (HUS1, Accession NP_004498.1) is another GAM7052 target gene, herein designated TARGET GENE. HUS1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HUS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HUS1 BINDING SITE, designated SEQ ID:16890, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49283] Another function of GAM7052 is therefore inhibition of

Hus1 checkpoint homolog (s. pombe) (HUS1, Accession NP_004498.1), a gene which May form DNA damage- responsive protein complex . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HUS1.

[49284] The function of HUS1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Interferon (alpha, beta and omega) receptor 2 (IFNAR2, Accession NP_000865.2) is another GAM7052 target gene, herein designated TARGET GENE. IFNAR2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IFNAR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IFNAR2 BINDING SITE, designated SEQ ID:10469, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49285] Another function of GAM7052 is therefore inhibition of Interferon (alpha, beta and omega) receptor 2 (IFNAR2, Accession NP_000865.2), a gene which is a receptor for interferons alpha and beta. Accordingly, utilities of

GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IFNAR2.

[49286] The function of IFNAR2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Insulin-like growth factor 1 (somatomedin c) (IGF1, Accession NP_000609.1) is another GAM7052 target gene, herein designated TARGET GENE. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IGF1 BINDING SITE, designated SEQ ID:8011, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49287] Another function of GAM7052 is therefore inhibition of Insulin-like growth factor 1 (somatomedin c) (IGF1, Accession NP_000609.1), a gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore may be associated with Growth retardation with sensorineural deafness and mental retardation. Accordingly, utilities of GAM7052

include diagnosis, prevention and treatment of Growth retardation with sensorineural deafness and mental retardation, and of other diseases and clinical conditions associated with IGF1.

[49288] The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.2.Interleukin 12 receptor, beta 1 (IL12RB1, Accession NP_714912.1) is another GAM7052 target gene, herein designated TARGET GENE. IL12RB1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by IL12RB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL12RB1 BINDING SITE, designated SEQ ID:12219, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49289] Another function of GAM7052 is therefore inhibition of Interleukin 12 receptor, beta 1 (IL12RB1, Accession NP_714912.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL12RB1.

[49290] Interleukin 28 receptor, alpha (IL28RA, Accession NP_775088.1) is another GAM7052 target gene, herein designated TARGET GENE. IL28RA BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by IL28RA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL28RA BINDING SITE, designated SEQ ID:1187, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49291] Another function of GAM7052 is therefore inhibition of Interleukin 28 receptor, alpha (IL28RA, Accession NP_775088.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL28RA.

[49292] Interleukin 28 receptor, alpha (IL28RA, Accession NP_734464.1) is another GAM7052 target gene, herein designated TARGET GENE. IL28RA BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by IL28RA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates

the complementarity of the nucleotide sequences of IL28RA BINDING SITE, designated SEQ ID:1187, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49293] Another function of GAM7052 is therefore inhibition of Interleukin 28 receptor, alpha (IL28RA, Accession NP_734464.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL28RA.

[49294] Interleukin 28 receptor, alpha (IL28RA, Accession NP_775087.1) is another GAM7052 target gene, herein designated TARGET GENE. IL28RA BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by IL28RA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL28RA BINDING SITE, designated SEQ ID:1187, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49295] Another function of GAM7052 is therefore inhibition of Interleukin 28 receptor, alpha (IL28RA, Accession NP_775087.1) . Accordingly, utilities of GAM7052 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with IL28RA.

[49296] IMPACT (Accession NP_060909.1) is another GAM7052 target gene, herein designated TARGET GENE. IMPACT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IMPACT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IMPACT BINDING SITE, designated SEQ ID:11567, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49297] Another function of GAM7052 is therefore inhibition of IMPACT (Accession NP_060909.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IMPACT.

[49298] Indolethylamine n-methyltransferase (INMT, Accession NP_006765.3) is another GAM7052 target gene, herein designated TARGET GENE. INMT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by INMT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of INMT BINDING SITE, designated SEQ ID:16621, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49299] Another function of GAM7052 is therefore inhibition of Indolethylamine n-methyltransferase (INMT, Accession NP_006765.3) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with INMT.

[49300] Interferon regulatory factor 4 (IRF4, Accession NP_002451.1) is another GAM7052 target gene, herein designated TARGET GENE. IRF4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IRF4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IRF4 BINDING SITE, designated SEQ ID:3531, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49301] Another function of GAM7052 is therefore inhibition of Interferon regulatory factor 4 (IRF4, Accession NP_002451.1) . Accordingly, utilities of GAM7052 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with IRF4.

[49302] Janus kinase 3 (a protein tyrosine kinase, leukocyte) (JAK3, Accession NP_000206.1) is another GAM7052 target gene, herein designated TARGET GENE. JAK3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by JAK3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of JAK3 BINDING SITE, designated SEQ ID:7364, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49303] Another function of GAM7052 is therefore inhibition of Janus kinase 3 (a protein tyrosine kinase, leukocyte) (JAK3, Accession NP_000206.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with JAK3.

[49304] JM11 (Accession NP_296375.1) is another GAM7052 target gene, herein designated TARGET GENE. JM11 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by JM11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of JM11 BINDING SITE, designated SEQ ID:19302, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49305] Another function of GAM7052 is therefore inhibition of JM11 (Accession NP_296375.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with JM11.

[49306] Potassium inwardly-rectifying channel, subfamily j, member 11 (KCNJ11, Accession NP_000516.2) is another GAM7052 target gene, herein designated TARGET GENE. KCNJ11 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KCNJ11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNJ11 BINDING SITE, designated SEQ ID:4460, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49307] Another function of GAM7052 is therefore inhibition of Potassium inwardly-rectifying channel, subfamily j, member 11 (KCNJ11, Accession NP_000516.2), a gene which is

controlled by g proteins. inward rectifier k+ channels are characterized by a greater tendancy to allow potassium to flow into the cell rather than out of it. and therefore is associated with Persistent hyperinsulinemic hypoglycemia of infancy. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of Persistent hyperinsulinemic hypoglycemia of infancy, and of other diseases and clinical conditions associated with KCNJ11.

[49308] The function of KCNJ11 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.KIAA0087 (Accession NP_055584.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA0087 BINDING SITE1 and KIAA0087 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA0087, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0087 BINDING SITE1 and KIAA0087 BINDING SITE2, designated SEQ ID:16774 and SEQ ID:18062 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49309] Another function of GAM7052 is therefore inhibition of KIAA0087 (Accession NP_055584.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0087.

[49310] KIAA0117 (Accession XP_290939.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA0117 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0117, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0117 BINDING SITE, designated SEQ ID:11163, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49311] Another function of GAM7052 is therefore inhibition of KIAA0117 (Accession XP_290939.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0117.

[49312] KIAA0186 (Accession NP_066545.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA0186 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by KIAA0186, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0186 BINDING SITE, designated SEQ ID:4041, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49313] Another function of GAM7052 is therefore inhibition of KIAA0186 (Accession NP_066545.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0186.

[49314] KIAA0406 (Accession NP_055472.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA0406 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA0406, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0406 BINDING SITE, designated SEQ ID:17968, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49315] Another function of GAM7052 is therefore inhibition of

KIAA0406 (Accession NP_055472.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0406.

[49316] KIAA0459 (Accession XP_027862.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA0459 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0459, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0459 BINDING SITE, designated SEQ ID:7366, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49317] Another function of GAM7052 is therefore inhibition of KIAA0459 (Accession XP_027862.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0459.

[49318] KIAA0472 (Accession XP_290898.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA0472 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA0472, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0472 BINDING SITE, designated SEQ ID:12393, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49319] Another function of GAM7052 is therefore inhibition of KIAA0472 (Accession XP_290898.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0472.

[49320] KIAA0475 (Accession NP_055679.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA0475 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0475, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0475 BINDING SITE, designated SEQ ID:7779, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49321] Another function of GAM7052 is therefore inhibition of KIAA0475 (Accession NP_055679.1) . Accordingly, utilities

of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0475.

[49322] KIAA0495 (Accession XP_031397.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA0495 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0495, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0495 BINDING SITE, designated SEQ ID:4636, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49323] Another function of GAM7052 is therefore inhibition of KIAA0495 (Accession XP_031397.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0495.

[49324] KIAA0513 (Accession NP_055547.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA0513 BINDING SITE1 and KIAA0513 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA0513, corresponding to target binding sites

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0513 BINDING SITE1 and KIAA0513 BINDING SITE2, designated SEQ ID:19867 and SEQ ID:5592 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49325] Another function of GAM7052 is therefore inhibition of KIAA0513 (Accession NP_055547.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0513.

[49326] KIAA0555 (Accession NP_055605.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA0555 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0555, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0555 BINDING SITE, designated SEQ ID:8953, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49327] Another function of GAM7052 is therefore inhibition of

KIAA0555 (Accession NP_055605.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0555.

[49328] KIAA0557 (Accession XP_085507.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA0557 BINDING SITE1 and KIAA0557 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA0557, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0557 BINDING SITE1 and KIAA0557 BINDING SITE2, designated SEQ ID:14583 and SEQ ID:9434 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49329] Another function of GAM7052 is therefore inhibition of KIAA0557 (Accession XP_085507.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0557.

[49330] KIAA0562 (Accession NP_055519.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA0562

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0562, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0562 BINDING SITE, designated SEQ ID:5466, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49331] Another function of GAM7052 is therefore inhibition of KIAA0562 (Accession NP_055519.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0562.

[49332] KIAA0563 (Accession NP_055649.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA0563 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA0563, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0563 BINDING SITE, designated SEQ ID:697, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49333] Another function of GAM7052 is therefore inhibition of KIAA0563 (Accession NP_055649.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0563.

[49334] KIAA0605 (Accession NP_055509.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA0605 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA0605, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0605 BINDING SITE, designated SEQ ID:5865, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49335] Another function of GAM7052 is therefore inhibition of KIAA0605 (Accession NP_055509.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0605.

[49336] KIAA0643 (Accession NP_079069.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA0643 BINDING SITE is a target binding site found in the 5` un-

translated region of mRNA encoded by KIAA0643, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0643 BINDING SITE, designated SEQ ID:6764, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49337] Another function of GAM7052 is therefore inhibition of KIAA0643 (Accession NP_079069.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0643.

[49338] KIAA0663 (Accession NP_055642.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA0663 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA0663, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0663 BINDING SITE, designated SEQ ID:19611, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49339] Another function of GAM7052 is therefore inhibition of

KIAA0663 (Accession NP_055642.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0663.

[49340] KIAA0831 (Accession NP_055739.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA0831 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0831, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0831 BINDING SITE, designated SEQ ID:10893, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49341] Another function of GAM7052 is therefore inhibition of KIAA0831 (Accession NP_055739.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0831.

[49342] KIAA0841 (Accession XP_049237.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA0841 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0841, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0841 BINDING SITE, designated SEQ ID:5866, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49343] Another function of GAM7052 is therefore inhibition of KIAA0841 (Accession XP_049237.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0841.

[49344] KIAA0861 (Accession NP_055893.2) is another GAM7052 target gene, herein designated TARGET GENE. KIAA0861 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0861, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0861 BINDING SITE, designated SEQ ID:9847, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49345] Another function of GAM7052 is therefore inhibition of KIAA0861 (Accession NP_055893.2) . Accordingly, utilities

of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0861.

[49346] KIAA0931 (Accession XP_041191.2) is another GAM7052 target gene, herein designated TARGET GENE. KIAA0931 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0931, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0931 BINDING SITE, designated SEQ ID:8012, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49347] Another function of GAM7052 is therefore inhibition of KIAA0931 (Accession XP_041191.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0931.

[49348] KIAA0962 (Accession XP_290942.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA0962 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0962, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0962 BINDING SITE, designated SEQ ID:2109, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49349] Another function of GAM7052 is therefore inhibition of KIAA0962 (Accession XP_290942.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0962.

[49350] KIAA0972 (Accession NP_055745.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA0972 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0972, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0972 BINDING SITE, designated SEQ ID:16232, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49351] Another function of GAM7052 is therefore inhibition of KIAA0972 (Accession NP_055745.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with KIAA0972.

[49352] KIAA0981 (Accession XP_028867.2) is another GAM7052 target gene, herein designated TARGET GENE. KIAA0981 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0981, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0981 BINDING SITE, designated SEQ ID:7266, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49353] Another function of GAM7052 is therefore inhibition of KIAA0981 (Accession XP_028867.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0981.

[49354] KIAA1002 (Accession XP_290584.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1002 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA1002, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of KIAA1002 BINDING SITE, designated SEQ ID:11806, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49355] Another function of GAM7052 is therefore inhibition of KIAA1002 (Accession XP_290584.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1002.

[49356] KIAA1041 (Accession NP_055762.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1041 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1041, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1041 BINDING SITE, designated SEQ ID:18227, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49357] Another function of GAM7052 is therefore inhibition of KIAA1041 (Accession NP_055762.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

KIAA1041.

[49358] KIAA1054 (Accession XP_043493.5) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1054 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1054, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1054 BINDING SITE, designated SEQ ID:3041, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49359] Another function of GAM7052 is therefore inhibition of KIAA1054 (Accession XP_043493.5) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1054.

[49360] KIAA1061 (Accession XP_048786.4) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1061 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1061, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

KIAA1061 BINDING SITE, designated SEQ ID:13719, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49361] Another function of GAM7052 is therefore inhibition of KIAA1061 (Accession XP_048786.4) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1061.

[49362] KIAA1128 (Accession NP_061872.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1128 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1128, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1128 BINDING SITE, designated SEQ ID:5120, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49363] Another function of GAM7052 is therefore inhibition of KIAA1128 (Accession NP_061872.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1128.

[49364] KIAA1185 (Accession NP_065761.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1185 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1185, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1185 BINDING SITE, designated SEQ ID:2092, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49365] Another function of GAM7052 is therefore inhibition of KIAA1185 (Accession NP_065761.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1185.

[49366] KIAA1193 (Accession XP_041843.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1193 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1193, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1193 BINDING SITE, designated SEQ ID:12481, to the

nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49367] Another function of GAM7052 is therefore inhibition of KIAA1193 (Accession XP_041843.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1193.

[49368] KIAA1198 (Accession NP_065765.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1198 BINDING SITE1 through KIAA1198 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by KIAA1198, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1198 BINDING SITE1 through KIAA1198 BINDING SITE3, designated SEQ ID:18274, SEQ ID:1359 and SEQ ID:12377 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49369] Another function of GAM7052 is therefore inhibition of KIAA1198 (Accession NP_065765.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

KIAA1198.

[49370] KIAA1200 (Accession XP_031054.4) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1200 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1200, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1200 BINDING SITE, designated SEQ ID:10959, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49371] Another function of GAM7052 is therefore inhibition of KIAA1200 (Accession XP_031054.4) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1200.

[49372] KIAA1209 (Accession XP_027307.2) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1209 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1209, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

KIAA1209 BINDING SITE, designated SEQ ID:15011, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49373] Another function of GAM7052 is therefore inhibition of KIAA1209 (Accession XP_027307.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1209.

[49374] KIAA1257 (Accession XP_031577.2) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1257 BINDING SITE1 and KIAA1257 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA1257, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1257 BINDING SITE1 and KIAA1257 BINDING SITE2, designated SEQ ID:7935 and SEQ ID:12291 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49375] Another function of GAM7052 is therefore inhibition of KIAA1257 (Accession XP_031577.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with KIAA1257.

[49376] KIAA1268 (Accession XP_291055.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1268 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1268, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1268 BINDING SITE, designated SEQ ID:16885, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49377] Another function of GAM7052 is therefore inhibition of KIAA1268 (Accession XP_291055.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1268.

[49378] KIAA1273 (Accession XP_300760.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1273 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA1273, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of KIAA1273 BINDING SITE, designated SEQ ID:13714, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49379] Another function of GAM7052 is therefore inhibition of KIAA1273 (Accession XP_300760.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1273.

[49380] KIAA1287 (Accession NP_065799.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1287 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1287, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1287 BINDING SITE, designated SEQ ID:14633, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49381] Another function of GAM7052 is therefore inhibition of KIAA1287 (Accession NP_065799.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

KIAA1287.

[49382] KIAA1443 (Accession NP_065885.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1443 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1443, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1443 BINDING SITE, designated SEQ ID:3913, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49383] Another function of GAM7052 is therefore inhibition of KIAA1443 (Accession NP_065885.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1443.

[49384] KIAA1456 (Accession XP_040100.3) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1456 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1456, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

KIAA1456 BINDING SITE, designated SEQ ID:6661, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49385] Another function of GAM7052 is therefore inhibition of KIAA1456 (Accession XP_040100.3) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1456.

[49386] KIAA1493 (Accession XP_034415.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1493 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1493, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1493 BINDING SITE, designated SEQ ID:9995, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49387] Another function of GAM7052 is therefore inhibition of KIAA1493 (Accession XP_034415.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1493.

[49388] KIAA1518 (Accession XP_170889.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1518 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by KIAA1518, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1518 BINDING SITE, designated SEQ ID:14558, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49389] Another function of GAM7052 is therefore inhibition of KIAA1518 (Accession XP_170889.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1518.

[49390] KIAA1530 (Accession XP_042661.5) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1530 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1530, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

KIAA1530 BINDING SITE, designated SEQ ID:12327, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49391] Another function of GAM7052 is therefore inhibition of KIAA1530 (Accession XP_042661.5) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1530.

[49392] KIAA1571 (Accession XP_027744.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1571 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1571, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1571 BINDING SITE, designated SEQ ID:9469, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49393] Another function of GAM7052 is therefore inhibition of KIAA1571 (Accession XP_027744.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1571.

[49394] KIAA1615 (Accession NP_066002.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1615 BINDING SITE1 and KIAA1615 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA1615, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1615 BINDING SITE1 and KIAA1615 BINDING SITE2, designated SEQ ID:18920 and SEQ ID:15445 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49395] Another function of GAM7052 is therefore inhibition of KIAA1615 (Accession NP_066002.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1615.

[49396] KIAA1617 (Accession XP_166140.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1617 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1617, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of KIAA1617 BINDING SITE, designated SEQ ID:1187, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49397] Another function of GAM7052 is therefore inhibition of KIAA1617 (Accession XP_166140.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1617.

[49398] KIAA1712 (Accession NP_085136.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1712 BINDING SITE1 and KIAA1712 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by KIAA1712, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1712 BINDING SITE1 and KIAA1712 BINDING SITE2, designated SEQ ID:15686 and SEQ ID:16883 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49399] Another function of GAM7052 is therefore inhibition of KIAA1712 (Accession NP_085136.1) . Accordingly, utilities

of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1712.

[49400] KIAA1712 (Accession XP_041497.2) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1712 BINDING SITE1 and KIAA1712 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by KIAA1712, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1712 BINDING SITE1 and KIAA1712 BINDING SITE2, designated SEQ ID:16883 and SEQ ID:15686 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49401] Another function of GAM7052 is therefore inhibition of KIAA1712 (Accession XP_041497.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1712.

[49402] KIAA1737 (Accession NP_219494.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1737 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by KIAA1737, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1737 BINDING SITE, designated SEQ ID:3033, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49403] Another function of GAM7052 is therefore inhibition of KIAA1737 (Accession NP_219494.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1737.

[49404] KIAA1827 (Accession XP_290834.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1827 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1827, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1827 BINDING SITE, designated SEQ ID:1496, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49405] Another function of GAM7052 is therefore inhibition of

KIAA1827 (Accession XP_290834.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1827.

[49406] KIAA1829 (Accession XP_030378.2) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1829 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1829, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1829 BINDING SITE, designated SEQ ID:2825, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49407] Another function of GAM7052 is therefore inhibition of KIAA1829 (Accession XP_030378.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1829.

[49408] KIAA1836 (Accession XP_114087.2) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1836 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1836, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1836 BINDING SITE, designated SEQ ID:14962, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49409] Another function of GAM7052 is therefore inhibition of KIAA1836 (Accession XP_114087.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1836.

[49410] KIAA1922 (Accession XP_057040.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1922 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA1922, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1922 BINDING SITE, designated SEQ ID:10834, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49411] Another function of GAM7052 is therefore inhibition of KIAA1922 (Accession XP_057040.1) . Accordingly, utilities

of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1922.

[49412] KIAA1940 (Accession XP_086981.2) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1940 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1940, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1940 BINDING SITE, designated SEQ ID:17635, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49413] Another function of GAM7052 is therefore inhibition of KIAA1940 (Accession XP_086981.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1940.

[49414] KIAA1971 (Accession XP_058720.4) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1971 BINDING SITE1 and KIAA1971 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA1971, corresponding to target binding sites

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1971 BINDING SITE1 and KIAA1971 BINDING SITE2, designated SEQ ID:16885 and SEQ ID:12858 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49415] Another function of GAM7052 is therefore inhibition of KIAA1971 (Accession XP_058720.4) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1971.

[49416] KIAA1987 (Accession XP_113870.1) is another GAM7052 target gene, herein designated TARGET GENE. KIAA1987 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA1987, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1987 BINDING SITE, designated SEQ ID:6990, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49417] Another function of GAM7052 is therefore inhibition of

KIAA1987 (Accession XP_113870.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1987.

[49418] KIAA2028 (Accession XP_059415.2) is another GAM7052 target gene, herein designated TARGET GENE. KIAA2028 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA2028, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA2028 BINDING SITE, designated SEQ ID:17522, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49419] Another function of GAM7052 is therefore inhibition of KIAA2028 (Accession XP_059415.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA2028.

[49420] Killer cell lectin-like receptor subfamily c, member 3 (KLRC3, Accession NP_002252.1) is another GAM7052 target gene, herein designated TARGET GENE. KLRC3 BINDING SITE is a target binding site found in the 3` un-

translated region of multiple transcripts of mRNA encoded by KLRC3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KLRC3 BINDING SITE, designated SEQ ID:12994, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49421] Another function of GAM7052 is therefore inhibition of Killer cell lectin-like receptor subfamily c, member 3 (KLRC3, Accession NP_002252.1), a gene which is a receptor for the recognition of mhc class i hla- e molecules by nk cells and some cytotoxic t- cells. Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KLRC3.

[49422] The function of KLRC3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2624.1.Lysosomal-associated membrane protein 3 (LAMP3, Accession NP_055213.1) is another GAM7052 target gene, herein designated TARGET GENE. LAMP3 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by LAMP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LAMP3 BINDING SITE, designated SEQ ID:1656, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49423] Another function of GAM7052 is therefore inhibition of Lysosomal-associated membrane protein 3 (LAMP3, Accession NP_055213.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LAMP3.

[49424] Lipoma hmgic fusion partner (LHFP, Accession NP_005771.1) is another GAM7052 target gene, herein designated TARGET GENE. LHFP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LHFP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LHFP BINDING SITE, designated SEQ ID:3333, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49425] Another function of GAM7052 is therefore inhibition of Lipoma hmgic fusion partner (LHFP, Accession NP_005771.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LHFP.

[49426] LNIR (Accession NP_112178.1) is another GAM7052 target gene, herein designated TARGET GENE. LNIR BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LNIR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LNIR BINDING SITE, designated SEQ ID:5115, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49427] Another function of GAM7052 is therefore inhibition of LNIR (Accession NP_112178.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LNIR.

[49428] LNK (Accession NP_005466.1) is another GAM7052 target gene, herein designated TARGET GENE. LNK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LNK, corresponding to a target

binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LNK BINDING SITE, designated SEQ ID:8674, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49429] Another function of GAM7052 is therefore inhibition of LNK (Accession NP_005466.1), a gene which links T- cell receptor activation signal to phospholipase c- gamma- 1, grb- 2 and phosphatidylinositol 3- kinase (by similarity). Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LNK.

[49430] The function of LNK and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.LOC112687 (Accession XP_053145.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC112687 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC112687, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC112687 BINDING SITE, designated SEQ ID:11096, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49431] Another function of GAM7052 is therefore inhibition of LOC112687 (Accession XP_053145.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC112687.

[49432] LOC112817 (Accession NP_612422.2) is another GAM7052 target gene, herein designated TARGET GENE. LOC112817 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC112817, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC112817 BINDING SITE, designated SEQ ID:12527, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49433] Another function of GAM7052 is therefore inhibition of LOC112817 (Accession NP_612422.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC112817.

[49434] LOC113444 (Accession NP_612437.2) is another GAM7052 target gene, herein designated TARGET GENE. LOC113444 BINDING SITE1 and LOC113444 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC113444, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC113444 BINDING SITE1 and LOC113444 BINDING SITE2, designated SEQ ID:13633 and SEQ ID:9691 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49435] Another function of GAM7052 is therefore inhibition of LOC113444 (Accession NP_612437.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC113444.

[49436] LOC115648 (Accession NP_663299.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC115648 BINDING SITE1 and LOC115648 BINDING SITE2 are target binding sites found in untranslated re-

gions of mRNA encoded by LOC115648, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC115648 BINDING SITE1 and LOC115648 BINDING SITE2, designated SEQ ID:5621 and SEQ ID:3028 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49437] Another function of GAM7052 is therefore inhibition of LOC115648 (Accession NP_663299.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC115648.

[49438] LOC118490 (Accession XP_060981.3) is another GAM7052 target gene, herein designated TARGET GENE. LOC118490 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC118490, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC118490 BINDING SITE, designated SEQ ID:13356, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:296.

[49439] Another function of GAM7052 is therefore inhibition of LOC118490 (Accession XP_060981.3) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC118490.

[49440] LOC118812 (Accession NP_849154.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC118812 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LOC118812, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC118812 BINDING SITE, designated SEQ ID:13816, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49441] Another function of GAM7052 is therefore inhibition of LOC118812 (Accession NP_849154.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC118812.

[49442] LOC118812 (Accession XP_058346.2) is another

GAM7052 target gene, herein designated TARGET GENE. LOC118812 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LOC118812, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC118812 BINDING SITE, designated SEQ ID:13816, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49443] Another function of GAM7052 is therefore inhibition of LOC118812 (Accession XP_058346.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC118812.

[49444] LOC121952 (Accession XP_062872.2) is another GAM7052 target gene, herein designated TARGET GENE. LOC121952 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC121952, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC121952 BINDING SITE, desig-

nated SEQ ID:18973, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49445] Another function of GAM7052 is therefore inhibition of LOC121952 (Accession XP_062872.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC121952.

[49446] LOC125061 (Accession XP_058889.3) is another GAM7052 target gene, herein designated TARGET GENE. LOC125061 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC125061, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC125061 BINDING SITE, designated SEQ ID:13952, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49447] Another function of GAM7052 is therefore inhibition of LOC125061 (Accession XP_058889.3) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC125061.

[49448] LOC126257 (Accession XP_059009.2) is another GAM7052 target gene, herein designated TARGET GENE. LOC126257 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC126257, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC126257 BINDING SITE, designated SEQ ID:18559, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49449] Another function of GAM7052 is therefore inhibition of LOC126257 (Accession XP_059009.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC126257.

[49450] LOC128387 (Accession XP_059243.2) is another GAM7052 target gene, herein designated TARGET GENE. LOC128387 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC128387, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC128387 BINDING SITE, designated SEQ ID:10834, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49451] Another function of GAM7052 is therefore inhibition of LOC128387 (Accession XP_059243.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC128387.

[49452] LOC129039 (Accession XP_059329.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC129039 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC129039, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC129039 BINDING SITE, designated SEQ ID:10993, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49453] Another function of GAM7052 is therefore inhibition of LOC129039 (Accession XP_059329.1) . Accordingly, utili-

ties of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC129039.

[49454] LOC130639 (Accession XP_059464.2) is another GAM7052 target gene, herein designated TARGET GENE. LOC130639 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC130639, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC130639 BINDING SITE, designated SEQ ID:19669, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49455] Another function of GAM7052 is therefore inhibition of LOC130639 (Accession XP_059464.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC130639.

[49456] LOC130813 (Accession XP_065904.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC130813 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

LOC130813, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC130813 BINDING SITE, designated SEQ ID:2257, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49457] Another function of GAM7052 is therefore inhibition of LOC130813 (Accession XP_065904.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC130813.

[49458] LOC135293 (Accession XP_072402.4) is another GAM7052 target gene, herein designated TARGET GENE. LOC135293 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC135293, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC135293 BINDING SITE, designated SEQ ID:18228, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49459] Another function of GAM7052 is therefore inhibition of LOC135293 (Accession XP_072402.4) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC135293.

[49460] LOC135763 (Accession NP_612639.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC135763 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC135763, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC135763 BINDING SITE, designated SEQ ID:19515, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49461] Another function of GAM7052 is therefore inhibition of LOC135763 (Accession NP_612639.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC135763.

[49462] LOC137886 (Accession XP_059929.3) is another GAM7052 target gene, herein designated TARGET GENE.

LOC137886 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC137886, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC137886 BINDING SITE, designated SEQ ID:2107, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49463] Another function of GAM7052 is therefore inhibition of LOC137886 (Accession XP_059929.3) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC137886.

[49464] LOC142826 (Accession XP_084355.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC142826 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC142826, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC142826 BINDING SITE, designated SEQ ID:6899, to the nucleotide sequence of

GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49465] Another function of GAM7052 is therefore inhibition of LOC142826 (Accession XP_084355.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC142826.

[49466] LOC142948 (Accession XP_096364.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC142948 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC142948, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC142948 BINDING SITE, designated SEQ ID:4637, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49467] Another function of GAM7052 is therefore inhibition of LOC142948 (Accession XP_096364.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC142948.

[49468] LOC143241 (Accession NP_620167.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC143241 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC143241, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC143241 BINDING SITE, designated SEQ ID:16432, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49469] Another function of GAM7052 is therefore inhibition of LOC143241 (Accession NP_620167.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC143241.

[49470] LOC143916 (Accession XP_084664.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC143916 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC143916, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC143916 BINDING SITE, designated SEQ ID:19303, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49471] Another function of GAM7052 is therefore inhibition of LOC143916 (Accession XP_084664.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC143916.

[49472] LOC144100 (Accession NP_778228.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC144100 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC144100, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144100 BINDING SITE, designated SEQ ID:18030, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49473] Another function of GAM7052 is therefore inhibition of LOC144100 (Accession NP_778228.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC144100.

[49474] LOC144248 (Accession XP_084786.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC144248 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC144248, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144248 BINDING SITE, designated SEQ ID:12527, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49475] Another function of GAM7052 is therefore inhibition of LOC144248 (Accession XP_084786.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144248.

[49476] LOC144742 (Accession XP_084949.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC144742 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC144742, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144742 BINDING SITE, designated SEQ ID:13167, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49477] Another function of GAM7052 is therefore inhibition of LOC144742 (Accession XP_084949.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144742.

[49478] LOC145268 (Accession XP_085072.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC145268 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC145268, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145268 BINDING SITE, designated SEQ ID:10250, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49479] Another function of GAM7052 is therefore inhibition of

LOC145268 (Accession XP_085072.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145268.

[49480] LOC145453 (Accession XP_085120.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC145453 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC145453, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145453 BINDING SITE, designated SEQ ID:6583, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49481] Another function of GAM7052 is therefore inhibition of LOC145453 (Accession XP_085120.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145453.

[49482] LOC145678 (Accession XP_096832.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC145678 BINDING SITE is a target binding site found in

the 5` untranslated region of mRNA encoded by LOC145678, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145678 BINDING SITE, designated SEQ ID:20072, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49483] Another function of GAM7052 is therefore inhibition of LOC145678 (Accession XP_096832.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145678.

[49484] LOC145757 (Accession XP_085227.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC145757 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC145757, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145757 BINDING SITE, designated SEQ ID:15280, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:296.

[49485] Another function of GAM7052 is therefore inhibition of LOC145757 (Accession XP_085227.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145757.

[49486] LOC146177 (Accession NP_778229.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC146177 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC146177, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146177 BINDING SITE, designated SEQ ID:2107, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49487] Another function of GAM7052 is therefore inhibition of LOC146177 (Accession NP_778229.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146177.

[49488] LOC146346 (Accession XP_085430.1) is another

GAM7052 target gene, herein designated TARGET GENE. LOC146346 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC146346, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146346 BINDING SITE, designated SEQ ID:10470, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49489] Another function of GAM7052 is therefore inhibition of LOC146346 (Accession XP_085430.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146346.

[49490] LOC146429 (Accession XP_096998.2) is another GAM7052 target gene, herein designated TARGET GENE. LOC146429 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC146429, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146429 BINDING SITE, desig-

nated SEQ ID:8011, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49491] Another function of GAM7052 is therefore inhibition of LOC146429 (Accession XP_096998.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146429.

[49492] LOC146443 (Accession XP_085461.6) is another GAM7052 target gene, herein designated TARGET GENE. LOC146443 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC146443, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146443 BINDING SITE, designated SEQ ID:4286, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49493] Another function of GAM7052 is therefore inhibition of LOC146443 (Accession XP_085461.6) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC146443.

[49494] LOC146820 (Accession XP_085603.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC146820 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC146820, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146820 BINDING SITE, designated SEQ ID:10012, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49495] Another function of GAM7052 is therefore inhibition of LOC146820 (Accession XP_085603.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146820.

[49496] LOC146894 (Accession NP_660316.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC146894 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC146894, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146894 BINDING SITE, designated SEQ ID:1234, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49497] Another function of GAM7052 is therefore inhibition of LOC146894 (Accession NP_660316.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146894.

[49498] LOC147071 (Accession XP_054031.5) is another GAM7052 target gene, herein designated TARGET GENE. LOC147071 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC147071, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147071 BINDING SITE, designated SEQ ID:1525, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49499] Another function of GAM7052 is therefore inhibition of LOC147071 (Accession XP_054031.5) . Accordingly, utili-

ties of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147071.

[49500] LOC147166 (Accession XP_085722.2) is another GAM7052 target gene, herein designated TARGET GENE. LOC147166 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC147166, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147166 BINDING SITE, designated SEQ ID:3032, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49501] Another function of GAM7052 is therefore inhibition of LOC147166 (Accession XP_085722.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147166.

[49502] LOC147791 (Accession XP_097293.2) is another GAM7052 target gene, herein designated TARGET GENE. LOC147791 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by

LOC147791, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147791 BINDING SITE, designated SEQ ID:8528, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49503] Another function of GAM7052 is therefore inhibition of LOC147791 (Accession XP_097293.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147791.

[49504] LOC147817 (Accession XP_085903.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC147817 BINDING SITE1 and LOC147817 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC147817, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147817 BINDING SITE1 and LOC147817 BINDING SITE2, designated SEQ ID:18468 and SEQ ID:16859 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated

GAM RNA, also designated SEQ ID:296.

[49505] Another function of GAM7052 is therefore inhibition of LOC147817 (Accession XP_085903.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147817.

[49506] LOC147841 (Accession XP_085924.2) is another GAM7052 target gene, herein designated TARGET GENE. LOC147841 BINDING SITE1 and LOC147841 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC147841, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147841 BINDING SITE1 and LOC147841 BINDING SITE2, designated SEQ ID:8527 and SEQ ID:2989 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49507] Another function of GAM7052 is therefore inhibition of LOC147841 (Accession XP_085924.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147841.

[49508] LOC148198 (Accession XP_047554.4) is another GAM7052 target gene, herein designated TARGET GENE. LOC148198 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC148198, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC148198 BINDING SITE, designated SEQ ID:16957, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49509] Another function of GAM7052 is therefore inhibition of LOC148198 (Accession XP_047554.4) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148198.

[49510] LOC148203 (Accession XP_086095.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC148203 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC148203, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC148203 BINDING SITE, designated SEQ ID:2820, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49511] Another function of GAM7052 is therefore inhibition of LOC148203 (Accession XP_086095.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148203.

[49512] LOC149466 (Accession XP_086546.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC149466 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC149466, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149466 BINDING SITE, designated SEQ ID:19862, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49513] Another function of GAM7052 is therefore inhibition of LOC149466 (Accession XP_086546.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC149466.

[49514] LOC149478 (Accession XP_086536.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC149478 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC149478, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149478 BINDING SITE, designated SEQ ID:4344, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49515] Another function of GAM7052 is therefore inhibition of LOC149478 (Accession XP_086536.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149478.

[49516] LOC149506 (Accession XP_097661.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC149506 BINDING SITE1 and LOC149506 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC149506, corresponding to

target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149506 BINDING SITE1 and LOC149506 BINDING SITE2, designated SEQ ID:15681 and SEQ ID:12482 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49517] Another function of GAM7052 is therefore inhibition of LOC149506 (Accession XP_097661.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149506.

[49518] LOC149692 (Accession XP_097706.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC149692 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC149692, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149692 BINDING SITE, designated SEQ ID:12440, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49519] Another function of GAM7052 is therefore inhibition of LOC149692 (Accession XP_097706.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149692.

[49520] LOC150054 (Accession XP_097797.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC150054 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC150054, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150054 BINDING SITE, designated SEQ ID:3913, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49521] Another function of GAM7052 is therefore inhibition of LOC150054 (Accession XP_097797.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150054.

[49522] LOC150225 (Accession XP_097870.1) is another GAM7052 target gene, herein designated TARGET GENE.

LOC150225 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC150225, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150225 BINDING SITE, designated SEQ ID:5964, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49523] Another function of GAM7052 is therefore inhibition of LOC150225 (Accession XP_097870.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150225.

[49524] LOC150282 (Accession XP_086852.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC150282 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC150282, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150282 BINDING SITE, designated SEQ ID:9847, to the nucleotide sequence of

GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49525] Another function of GAM7052 is therefore inhibition of LOC150282 (Accession XP_086852.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150282.

[49526] LOC150397 (Accession XP_086907.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC150397 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC150397, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150397 BINDING SITE, designated SEQ ID:11386, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49527] Another function of GAM7052 is therefore inhibition of LOC150397 (Accession XP_086907.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150397.

[49528] LOC150587 (Accession XP_097917.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC150587 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC150587, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150587 BINDING SITE, designated SEQ ID:9025, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49529] Another function of GAM7052 is therefore inhibition of LOC150587 (Accession XP_097917.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150587.

[49530] LOC151057 (Accession XP_097998.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC151057 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC151057, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC151057 BINDING SITE, designated SEQ ID:14936, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49531] Another function of GAM7052 is therefore inhibition of LOC151057 (Accession XP_097998.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151057.

[49532] LOC151475 (Accession XP_098063.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC151475 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC151475, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151475 BINDING SITE, designated SEQ ID:6688, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49533] Another function of GAM7052 is therefore inhibition of LOC151475 (Accession XP_098063.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC151475.

[49534] LOC151636 (Accession NP_612144.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC151636 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC151636, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151636 BINDING SITE, designated SEQ ID:7366, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49535] Another function of GAM7052 is therefore inhibition of LOC151636 (Accession NP_612144.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151636.

[49536] LOC152620 (Accession XP_011108.2) is another GAM7052 target gene, herein designated TARGET GENE. LOC152620 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC152620, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152620 BINDING SITE, designated SEQ ID:11229, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49537] Another function of GAM7052 is therefore inhibition of LOC152620 (Accession XP_011108.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152620.

[49538] LOC152667 (Accession XP_087500.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC152667 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC152667, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152667 BINDING SITE, designated SEQ ID:5099, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49539] Another function of GAM7052 is therefore inhibition of

LOC152667 (Accession XP_087500.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152667.

[49540] LOC152719 (Accession XP_098257.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC152719 BINDING SITE1 and LOC152719 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC152719, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152719 BINDING SITE1 and LOC152719 BINDING SITE2, designated SEQ ID:726 and SEQ ID:14742 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49541] Another function of GAM7052 is therefore inhibition of LOC152719 (Accession XP_098257.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152719.

[49542] LOC152804 (Accession XP_098266.2) is another GAM7052 target gene, herein designated TARGET GENE.

LOC152804 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC152804, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152804 BINDING SITE, designated SEQ ID:2898, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49543] Another function of GAM7052 is therefore inhibition of LOC152804 (Accession XP_098266.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152804.

[49544] LOC153077 (Accession XP_098307.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC153077 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC153077, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC153077 BINDING SITE, designated SEQ ID:4990, to the nucleotide sequence of

GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49545] Another function of GAM7052 is therefore inhibition of LOC153077 (Accession XP_098307.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153077.

[49546] LOC154282 (Accession XP_098505.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC154282 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC154282, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC154282 BINDING SITE, designated SEQ ID:19732, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49547] Another function of GAM7052 is therefore inhibition of LOC154282 (Accession XP_098505.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC154282.

[49548] LOC154739 (Accession XP_098602.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC154739 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC154739, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC154739 BINDING SITE, designated SEQ ID:16887, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49549] Another function of GAM7052 is therefore inhibition of LOC154739 (Accession XP_098602.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC154739.

[49550] LOC154822 (Accession XP_098618.3) is another GAM7052 target gene, herein designated TARGET GENE. LOC154822 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC154822, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC154822 BINDING SITE, designated SEQ ID:1649, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49551] Another function of GAM7052 is therefore inhibition of LOC154822 (Accession XP_098618.3) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC154822.

[49552] LOC154866 (Accession XP_088059.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC154866 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC154866, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC154866 BINDING SITE, designated SEQ ID:17476, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49553] Another function of GAM7052 is therefore inhibition of LOC154866 (Accession XP_088059.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC154866.

[49554] LOC154877 (Accession XP_098626.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC154877 BINDING SITE1 through LOC154877 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC154877, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC154877 BINDING SITE1 through LOC154877 BINDING SITE3, designated SEQ ID:14460, SEQ ID:19863 and SEQ ID:2182 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49555] Another function of GAM7052 is therefore inhibition of LOC154877 (Accession XP_098626.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC154877.

[49556] LOC157531 (Accession XP_212210.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC157531 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of

mRNA encoded by LOC157531, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC157531 BINDING SITE, designated SEQ ID:1954, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49557] Another function of GAM7052 is therefore inhibition of LOC157531 (Accession XP_212210.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157531.

[49558] LOC157858 (Accession XP_098833.2) is another GAM7052 target gene, herein designated TARGET GENE. LOC157858 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC157858, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC157858 BINDING SITE, designated SEQ ID:6270, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49559] Another function of GAM7052 is therefore inhibition of LOC157858 (Accession XP_098833.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157858.

[49560] LOC158436 (Accession XP_098942.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC158436 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC158436, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158436 BINDING SITE, designated SEQ ID:14740, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49561] Another function of GAM7052 is therefore inhibition of LOC158436 (Accession XP_098942.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158436.

[49562] LOC158476 (Accession XP_098955.1) is another GAM7052 target gene, herein designated TARGET GENE.

LOC158476 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC158476, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158476 BINDING SITE, designated SEQ ID:12099, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49563] Another function of GAM7052 is therefore inhibition of LOC158476 (Accession XP_098955.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158476.

[49564] LOC158527 (Accession XP_088594.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC158527 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC158527, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158527 BINDING SITE, designated SEQ ID:17909, to the nucleotide sequence of

GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49565] Another function of GAM7052 is therefore inhibition of LOC158527 (Accession XP_088594.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158527.

[49566] LOC158668 (Accession XP_045161.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC158668 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC158668, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158668 BINDING SITE, designated SEQ ID:14574, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49567] Another function of GAM7052 is therefore inhibition of LOC158668 (Accession XP_045161.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158668.

[49568] LOC158865 (Accession XP_099000.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC158865 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC158865, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158865 BINDING SITE, designated SEQ ID:4005, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49569] Another function of GAM7052 is therefore inhibition of LOC158865 (Accession XP_099000.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158865.

[49570] LOC160897 (Accession XP_090573.3) is another GAM7052 target gene, herein designated TARGET GENE. LOC160897 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC160897, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC160897 BINDING SITE, designated SEQ ID:15778, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49571] Another function of GAM7052 is therefore inhibition of LOC160897 (Accession XP_090573.3) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC160897.

[49572] LOC162967 (Accession XP_091890.6) is another GAM7052 target gene, herein designated TARGET GENE. LOC162967 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC162967, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC162967 BINDING SITE, designated SEQ ID:15400, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49573] Another function of GAM7052 is therefore inhibition of LOC162967 (Accession XP_091890.6) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC162967.

[49574] LOC162993 (Accession XP_091914.2) is another GAM7052 target gene, herein designated TARGET GENE. LOC162993 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC162993, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC162993 BINDING SITE, designated SEQ ID:16333, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49575] Another function of GAM7052 is therefore inhibition of LOC162993 (Accession XP_091914.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC162993.

[49576] LOC163227 (Accession NP_775802.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC163227 BINDING SITE1 and LOC163227 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC163227, corresponding to

target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC163227 BINDING SITE1 and LOC163227 BINDING SITE2, designated SEQ ID:12740 and SEQ ID:12735 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49577] Another function of GAM7052 is therefore inhibition of LOC163227 (Accession NP_775802.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC163227.

[49578] LOC164091 (Accession XP_089356.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC164091 BINDING SITE1 and LOC164091 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC164091, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC164091 BINDING SITE1 and LOC164091 BINDING SITE2, designated SEQ ID:8838 and SEQ ID:7689 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated

GAM RNA, also designated SEQ ID:296.

[49579] Another function of GAM7052 is therefore inhibition of LOC164091 (Accession XP_089356.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC164091.

[49580] LOC168451 (Accession XP_095114.2) is another GAM7052 target gene, herein designated TARGET GENE. LOC168451 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC168451, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC168451 BINDING SITE, designated SEQ ID:17863, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49581] Another function of GAM7052 is therefore inhibition of LOC168451 (Accession XP_095114.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC168451.

[49582] LOC169611 (Accession XP_095809.4) is another

GAM7052 target gene, herein designated TARGET GENE. LOC169611 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC169611, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC169611 BINDING SITE, designated SEQ ID:11251, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49583] Another function of GAM7052 is therefore inhibition of LOC169611 (Accession XP_095809.4) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC169611.

[49584] LOC196264 (Accession XP_113683.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC196264 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC196264, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC196264 BINDING SITE, desig-

nated SEQ ID:2824, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49585] Another function of GAM7052 is therefore inhibition of LOC196264 (Accession XP_113683.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC196264.

[49586] LOC199725 (Accession XP_117119.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC199725 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC199725, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC199725 BINDING SITE, designated SEQ ID:9306, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49587] Another function of GAM7052 is therefore inhibition of LOC199725 (Accession XP_117119.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC199725.

[49588] LOC199858 (Accession XP_114040.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC199858 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC199858, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC199858 BINDING SITE, designated SEQ ID:1343, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49589] Another function of GAM7052 is therefore inhibition of LOC199858 (Accession XP_114040.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC199858.

[49590] LOC199899 (Accession XP_117153.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC199899 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC199899, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC199899 BINDING SITE, designated SEQ ID:9143, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49591] Another function of GAM7052 is therefore inhibition of LOC199899 (Accession XP_117153.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC199899.

[49592] LOC200339 (Accession XP_117226.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC200339 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC200339, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC200339 BINDING SITE, designated SEQ ID:12277, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49593] Another function of GAM7052 is therefore inhibition of LOC200339 (Accession XP_117226.1) . Accordingly, utili-

ties of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC200339.

[49594] LOC200491 (Accession XP_117239.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC200491 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC200491, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC200491 BINDING SITE, designated SEQ ID:11368, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49595] Another function of GAM7052 is therefore inhibition of LOC200491 (Accession XP_117239.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC200491.

[49596] LOC201164 (Accession XP_290750.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC201164 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of

mRNA encoded by LOC201164, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC201164 BINDING SITE, designated SEQ ID:3032, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49597] Another function of GAM7052 is therefore inhibition of LOC201164 (Accession XP_290750.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201164.

[49598] LOC201164 (Accession NP_849158.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC201164 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LOC201164, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC201164 BINDING SITE, designated SEQ ID:3032, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49599] Another function of GAM7052 is therefore inhibition of LOC201164 (Accession NP_849158.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201164.

[49600] LOC201292 (Accession NP_775818.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC201292 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC201292, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC201292 BINDING SITE, designated SEQ ID:9524, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49601] Another function of GAM7052 is therefore inhibition of LOC201292 (Accession NP_775818.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201292.

[49602] LOC201562 (Accession XP_114343.2) is another GAM7052 target gene, herein designated TARGET GENE.

LOC201562 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC201562, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC201562 BINDING SITE, designated SEQ ID:16775, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49603] Another function of GAM7052 is therefore inhibition of LOC201562 (Accession XP_114343.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201562.

[49604] LOC202400 (Accession XP_117397.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC202400 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC202400, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC202400 BINDING SITE, designated SEQ ID:9253, to the nucleotide sequence of

GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49605] Another function of GAM7052 is therefore inhibition of LOC202400 (Accession XP_117397.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC202400.

[49606] LOC202934 (Accession XP_117486.2) is another GAM7052 target gene, herein designated TARGET GENE. LOC202934 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC202934, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC202934 BINDING SITE, designated SEQ ID:18974, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49607] Another function of GAM7052 is therefore inhibition of LOC202934 (Accession XP_117486.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC202934.

[49608] LOC219731 (Accession XP_167596.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC219731 BINDING SITE1 and LOC219731 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC219731, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC219731 BINDING SITE1 and LOC219731 BINDING SITE2, designated SEQ ID:5076 and SEQ ID:3064 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49609] Another function of GAM7052 is therefore inhibition of LOC219731 (Accession XP_167596.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC219731.

[49610] LOC219735 (Accession XP_167601.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC219735 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC219735, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC219735 BINDING SITE, designated SEQ ID:3029, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49611] Another function of GAM7052 is therefore inhibition of LOC219735 (Accession XP_167601.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC219735.

[49612] LOC220074 (Accession NP_660352.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC220074 BINDING SITE1 and LOC220074 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC220074, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC220074 BINDING SITE1 and LOC220074 BINDING SITE2, designated SEQ ID:14319 and SEQ ID:12482 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49613] Another function of GAM7052 is therefore inhibition of

LOC220074 (Accession NP_660352.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC220074.

[49614] LOC221540 (Accession XP_168133.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC221540 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC221540, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221540 BINDING SITE, designated SEQ ID:8853, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49615] Another function of GAM7052 is therefore inhibition of LOC221540 (Accession XP_168133.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221540.

[49616] LOC221814 (Accession XP_168226.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC221814 BINDING SITE is a target binding site found in

the 5` untranslated region of mRNA encoded by LOC221814, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221814 BINDING SITE, designated SEQ ID:16581, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49617] Another function of GAM7052 is therefore inhibition of LOC221814 (Accession XP_168226.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221814.

[49618] LOC222068 (Accession XP_166556.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC222068 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC222068, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC222068 BINDING SITE, designated SEQ ID:1573, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:296.

[49619] Another function of GAM7052 is therefore inhibition of LOC222068 (Accession XP_166556.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC222068.

[49620] LOC222159 (Accession XP_212100.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC222159 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by LOC222159, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC222159 BINDING SITE, designated SEQ ID:11226, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49621] Another function of GAM7052 is therefore inhibition of LOC222159 (Accession XP_212100.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC222159.

[49622] LOC222224 (Accession XP_168473.1) is another

GAM7052 target gene, herein designated TARGET GENE. LOC222224 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC222224, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC222224 BINDING SITE, designated SEQ ID:9925, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49623] Another function of GAM7052 is therefore inhibition of LOC222224 (Accession XP_168473.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC222224.

[49624] LOC253612 (Accession XP_172985.2) is another GAM7052 target gene, herein designated TARGET GENE. LOC253612 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC253612, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC253612 BINDING SITE, desig-

nated SEQ ID:11867, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49625] Another function of GAM7052 is therefore inhibition of LOC253612 (Accession XP_172985.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC253612.

[49626] LOC253842 (Accession XP_173230.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC253842 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC253842, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC253842 BINDING SITE, designated SEQ ID:9847, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49627] Another function of GAM7052 is therefore inhibition of LOC253842 (Accession XP_173230.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC253842.

[49628] LOC253981 (Accession XP_171064.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC253981 BINDING SITE1 and LOC253981 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC253981, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC253981 BINDING SITE1 and LOC253981 BINDING SITE2, designated SEQ ID:3391 and SEQ ID:2107 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49629] Another function of GAM7052 is therefore inhibition of LOC253981 (Accession XP_171064.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC253981.

[49630] LOC254532 (Accession XP_172961.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC254532 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC254532, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC254532 BINDING SITE, designated SEQ ID:4317, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49631] Another function of GAM7052 is therefore inhibition of LOC254532 (Accession XP_172961.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC254532.

[49632] LOC282905 (Accession XP_212606.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC282905 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC282905, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282905 BINDING SITE, designated SEQ ID:14138, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49633] Another function of GAM7052 is therefore inhibition of

LOC282905 (Accession XP_212606.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282905.

[49634] LOC282916 (Accession XP_212603.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC282916 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC282916, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282916 BINDING SITE, designated SEQ ID:8853, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49635] Another function of GAM7052 is therefore inhibition of LOC282916 (Accession XP_212603.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282916.

[49636] LOC282943 (Accession XP_212647.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC282943 BINDING SITE is a target binding site found in

the 5` untranslated region of mRNA encoded by LOC282943, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282943 BINDING SITE, designated SEQ ID:14138, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49637] Another function of GAM7052 is therefore inhibition of LOC282943 (Accession XP_212647.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282943.

[49638] LOC282953 (Accession XP_212644.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC282953 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC282953, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282953 BINDING SITE, designated SEQ ID:8853, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:296.

[49639] Another function of GAM7052 is therefore inhibition of LOC282953 (Accession XP_212644.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282953.

[49640] LOC283012 (Accession XP_210847.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC283012 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283012, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283012 BINDING SITE, designated SEQ ID:13809, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49641] Another function of GAM7052 is therefore inhibition of LOC283012 (Accession XP_210847.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283012.

[49642] LOC283089 (Accession XP_210885.1) is another

GAM7052 target gene, herein designated TARGET GENE. LOC283089 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283089, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283089 BINDING SITE, designated SEQ ID:16357, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49643] Another function of GAM7052 is therefore inhibition of LOC283089 (Accession XP_210885.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283089.

[49644] LOC283177 (Accession XP_210903.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC283177 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283177, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283177 BINDING SITE, desig-

nated SEQ ID:3679, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49645] Another function of GAM7052 is therefore inhibition of LOC283177 (Accession XP_210903.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283177.

[49646] LOC283215 (Accession XP_208555.2) is another GAM7052 target gene, herein designated TARGET GENE. LOC283215 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283215, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283215 BINDING SITE, designated SEQ ID:8183, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49647] Another function of GAM7052 is therefore inhibition of LOC283215 (Accession XP_208555.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC283215.

[49648] LOC283241 (Accession NP_787089.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC283241 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283241, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283241 BINDING SITE, designated SEQ ID:1942, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49649] Another function of GAM7052 is therefore inhibition of LOC283241 (Accession NP_787089.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283241.

[49650] LOC283293 (Accession XP_210962.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC283293 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283293, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283293 BINDING SITE, designated SEQ ID:10694, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49651] Another function of GAM7052 is therefore inhibition of LOC283293 (Accession XP_210962.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283293.

[49652] LOC283335 (Accession XP_210981.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC283335 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283335, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283335 BINDING SITE, designated SEQ ID:14245, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49653] Another function of GAM7052 is therefore inhibition of LOC283335 (Accession XP_210981.1) . Accordingly, utili-

ties of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283335.

[49654] LOC283377 (Accession XP_208647.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC283377 BINDING SITE1 and LOC283377 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283377, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283377 BINDING SITE1 and LOC283377 BINDING SITE2, designated SEQ ID:9023 and SEQ ID:18130 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49655] Another function of GAM7052 is therefore inhibition of LOC283377 (Accession XP_208647.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283377.

[49656] LOC283387 (Accession XP_211007.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC283387 BINDING SITE is a target binding site found in

the 3` untranslated region of mRNA encoded by LOC283387, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283387 BINDING SITE, designated SEQ ID:1113, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49657] Another function of GAM7052 is therefore inhibition of LOC283387 (Accession XP_211007.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283387.

[49658] LOC283400 (Accession XP_211024.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC283400 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283400, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283400 BINDING SITE, designated SEQ ID:16677, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:296.

[49659] Another function of GAM7052 is therefore inhibition of LOC283400 (Accession XP_211024.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283400.

[49660] LOC283432 (Accession XP_211032.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC283432 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283432, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283432 BINDING SITE, designated SEQ ID:9847, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49661] Another function of GAM7052 is therefore inhibition of LOC283432 (Accession XP_211032.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283432.

[49662] LOC283454 (Accession XP_211049.1) is another

GAM7052 target gene, herein designated TARGET GENE. LOC283454 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283454, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283454 BINDING SITE, designated SEQ ID:8011, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49663] Another function of GAM7052 is therefore inhibition of LOC283454 (Accession XP_211049.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283454.

[49664] LOC283487 (Accession XP_211062.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC283487 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LOC283487, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283487

BINDING SITE, designated SEQ ID:10199, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49665] Another function of GAM7052 is therefore inhibition of LOC283487 (Accession XP_211062.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283487.

[49666] LOC283507 (Accession XP_211075.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC283507 BINDING SITE1 and LOC283507 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283507, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283507 BINDING SITE1 and LOC283507 BINDING SITE2, designated SEQ ID:1226 and SEQ ID:4986 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49667] Another function of GAM7052 is therefore inhibition of LOC283507 (Accession XP_211075.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC283507.

[49668] LOC283523 (Accession XP_208097.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC283523 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283523, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283523 BINDING SITE, designated SEQ ID:5965, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49669] Another function of GAM7052 is therefore inhibition of LOC283523 (Accession XP_208097.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283523.

[49670] LOC283624 (Accession XP_211126.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC283624 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283624, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283624 BINDING SITE, designated SEQ ID:12482, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49671] Another function of GAM7052 is therefore inhibition of LOC283624 (Accession XP_211126.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283624.

[49672] LOC283637 (Accession XP_211134.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC283637 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283637, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283637 BINDING SITE, designated SEQ ID:19555, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49673] Another function of GAM7052 is therefore inhibition of

LOC283637 (Accession XP_211134.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283637.

[49674] LOC283641 (Accession XP_208764.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC283641 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283641, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283641 BINDING SITE, designated SEQ ID:5466, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49675] Another function of GAM7052 is therefore inhibition of LOC283641 (Accession XP_208764.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283641.

[49676] LOC283655 (Accession XP_211144.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC283655 BINDING SITE1 and LOC283655 BINDING

SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283655, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283655 BINDING SITE1 and LOC283655 BINDING SITE2, designated SEQ ID:16035 and SEQ ID:19485 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49677] Another function of GAM7052 is therefore inhibition of LOC283655 (Accession XP_211144.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283655.

[49678] LOC283690 (Accession XP_211167.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC283690 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283690, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283690 BINDING SITE, designated SEQ ID:4911, to the nucleotide sequence of

GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49679] Another function of GAM7052 is therefore inhibition of LOC283690 (Accession XP_211167.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283690.

[49680] LOC283701 (Accession XP_211170.3) is another GAM7052 target gene, herein designated TARGET GENE. LOC283701 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283701, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283701 BINDING SITE, designated SEQ ID:12676, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49681] Another function of GAM7052 is therefore inhibition of LOC283701 (Accession XP_211170.3) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283701.

[49682] LOC283857 (Accession XP_211236.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC283857 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283857, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283857 BINDING SITE, designated SEQ ID:13947, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49683] Another function of GAM7052 is therefore inhibition of LOC283857 (Accession XP_211236.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283857.

[49684] LOC283861 (Accession NP_787095.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC283861 BINDING SITE1 and LOC283861 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283861, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the com-

plementarity of the nucleotide sequences of LOC283861 BINDING SITE1 and LOC283861 BINDING SITE2, designated SEQ ID:4775 and SEQ ID:3638 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49685] Another function of GAM7052 is therefore inhibition of LOC283861 (Accession NP_787095.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283861.

[49686] LOC283863 (Accession XP_208875.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC283863 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283863, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283863 BINDING SITE, designated SEQ ID:12833, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49687] Another function of GAM7052 is therefore inhibition of LOC283863 (Accession XP_208875.1) . Accordingly, utili-

ties of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283863.

[49688] LOC283889 (Accession XP_208899.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC283889 BINDING SITE1 and LOC283889 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283889, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283889 BINDING SITE1 and LOC283889 BINDING SITE2, designated SEQ ID:5077 and SEQ ID:765 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49689] Another function of GAM7052 is therefore inhibition of LOC283889 (Accession XP_208899.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283889.

[49690] LOC283928 (Accession XP_208909.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC283928 BINDING SITE1 through LOC283928 BINDING

SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC283928, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283928 BINDING SITE1 through LOC283928 BINDING SITE3, designated SEQ ID:5120, SEQ ID:10915 and SEQ ID:10829 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49691] Another function of GAM7052 is therefore inhibition of LOC283928 (Accession XP_208909.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283928.

[49692] LOC284001 (Accession XP_208958.2) is another GAM7052 target gene, herein designated TARGET GENE. LOC284001 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284001, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284001 BINDING SITE, designated SEQ ID:15850, to the nucleotide sequence of

GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49693] Another function of GAM7052 is therefore inhibition of LOC284001 (Accession XP_208958.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284001.

[49694] LOC284023 (Accession XP_208983.3) is another GAM7052 target gene, herein designated TARGET GENE. LOC284023 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284023, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284023 BINDING SITE, designated SEQ ID:15391, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49695] Another function of GAM7052 is therefore inhibition of LOC284023 (Accession XP_208983.3) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284023.

[49696] LOC284063 (Accession XP_208992.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC284063 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284063, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284063 BINDING SITE, designated SEQ ID:6628, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49697] Another function of GAM7052 is therefore inhibition of LOC284063 (Accession XP_208992.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284063.

[49698] LOC284080 (Accession XP_211322.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC284080 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284080, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC284080 BINDING SITE, designated SEQ ID:7784, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49699] Another function of GAM7052 is therefore inhibition of LOC284080 (Accession XP_211322.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284080.

[49700] LOC284098 (Accession XP_209008.3) is another GAM7052 target gene, herein designated TARGET GENE. LOC284098 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284098, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284098 BINDING SITE, designated SEQ ID:4384, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49701] Another function of GAM7052 is therefore inhibition of LOC284098 (Accession XP_209008.3) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC284098.

[49702] LOC284102 (Accession XP_211327.3) is another GAM7052 target gene, herein designated TARGET GENE. LOC284102 BINDING SITE1 through LOC284102 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC284102, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284102 BINDING SITE1 through LOC284102 BINDING SITE3, designated SEQ ID:16386, SEQ ID:12703 and SEQ ID:10012 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49703] Another function of GAM7052 is therefore inhibition of LOC284102 (Accession XP_211327.3) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284102.

[49704] LOC284116 (Accession XP_211338.2) is another GAM7052 target gene, herein designated TARGET GENE. LOC284116 BINDING SITE is a target binding site found in

the 5` untranslated region of mRNA encoded by LOC284116, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284116 BINDING SITE, designated SEQ ID:8308, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49705] Another function of GAM7052 is therefore inhibition of LOC284116 (Accession XP_211338.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284116.

[49706] LOC284117 (Accession XP_209024.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC284117 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284117, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284117 BINDING SITE, designated SEQ ID:7907, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:296.

[49707] Another function of GAM7052 is therefore inhibition of LOC284117 (Accession XP_209024.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284117.

[49708] LOC284135 (Accession XP_209032.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC284135 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284135, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284135 BINDING SITE, designated SEQ ID:12522, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49709] Another function of GAM7052 is therefore inhibition of LOC284135 (Accession XP_209032.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284135.

[49710] LOC284155 (Accession XP_211354.1) is another

GAM7052 target gene, herein designated TARGET GENE. LOC284155 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284155, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284155 BINDING SITE, designated SEQ ID:15851, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49711] Another function of GAM7052 is therefore inhibition of LOC284155 (Accession XP_211354.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284155.

[49712] LOC284171 (Accession XP_209051.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC284171 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284171, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284171 BINDING SITE, desig-

nated SEQ ID:6477, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49713] Another function of GAM7052 is therefore inhibition of LOC284171 (Accession XP_209051.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284171.

[49714] LOC284183 (Accession XP_209059.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC284183 BINDING SITE1 and LOC284183 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284183, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284183 BINDING SITE1 and LOC284183 BINDING SITE2, designated SEQ ID:8749 and SEQ ID:10894 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49715] Another function of GAM7052 is therefore inhibition of LOC284183 (Accession XP_209059.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC284183.

[49716] LOC284260 (Accession XP_211408.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC284260 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284260, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284260 BINDING SITE, designated SEQ ID:17615, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49717] Another function of GAM7052 is therefore inhibition of LOC284260 (Accession XP_211408.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284260.

[49718] LOC284281 (Accession XP_211415.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC284281 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284281, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284281 BINDING SITE, designated SEQ ID:7059, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49719] Another function of GAM7052 is therefore inhibition of LOC284281 (Accession XP_211415.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284281.

[49720] LOC284286 (Accession XP_211419.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC284286 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284286, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284286 BINDING SITE, designated SEQ ID:19098, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49721] Another function of GAM7052 is therefore inhibition of

LOC284286 (Accession XP_211419.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284286.

[49722] LOC284289 (Accession XP_209105.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC284289 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284289, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284289 BINDING SITE, designated SEQ ID:3340, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49723] Another function of GAM7052 is therefore inhibition of LOC284289 (Accession XP_209105.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284289.

[49724] LOC284305 (Accession XP_211425.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC284305 BINDING SITE1 and LOC284305 BINDING

SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284305, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284305 BINDING SITE1 and LOC284305 BINDING SITE2, designated SEQ ID:16484 and SEQ ID:16775 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49725] Another function of GAM7052 is therefore inhibition of LOC284305 (Accession XP_211425.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284305.

[49726] LOC284311 (Accession XP_302720.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC284311 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284311, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284311 BINDING SITE, designated SEQ ID:15828, to the nucleotide sequence of

GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49727] Another function of GAM7052 is therefore inhibition of LOC284311 (Accession XP_302720.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284311.

[49728] LOC284356 (Accession XP_211437.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC284356 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284356, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284356 BINDING SITE, designated SEQ ID:7004, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49729] Another function of GAM7052 is therefore inhibition of LOC284356 (Accession XP_211437.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284356.

[49730] LOC284362 (Accession XP_211435.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC284362 BINDING SITE1 and LOC284362 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284362, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284362 BINDING SITE1 and LOC284362 BINDING SITE2, designated SEQ ID:1466 and SEQ ID:11728 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49731] Another function of GAM7052 is therefore inhibition of LOC284362 (Accession XP_211435.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284362.

[49732] LOC284396 (Accession XP_211452.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC284396 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284396, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284396 BINDING SITE, designated SEQ ID:15146, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49733] Another function of GAM7052 is therefore inhibition of LOC284396 (Accession XP_211452.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284396.

[49734] LOC284426 (Accession XP_209198.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC284426 BINDING SITE1 through LOC284426 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC284426, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284426 BINDING SITE1 through LOC284426 BINDING SITE3, designated SEQ ID:5116, SEQ ID:5145 and SEQ ID:12481 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49735] Another function of GAM7052 is therefore inhibition of

LOC284426 (Accession XP_209198.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284426.

[49736] LOC284436 (Accession XP_290862.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC284436 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284436, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284436 BINDING SITE, designated SEQ ID:8011, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49737] Another function of GAM7052 is therefore inhibition of LOC284436 (Accession XP_290862.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284436.

[49738] LOC284454 (Accession XP_209216.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC284454 BINDING SITE1 and LOC284454 BINDING

SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284454, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284454 BINDING SITE1 and LOC284454 BINDING SITE2, designated SEQ ID:13118 and SEQ ID:15855 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49739] Another function of GAM7052 is therefore inhibition of LOC284454 (Accession XP_209216.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284454.

[49740] LOC284577 (Accession XP_211522.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC284577 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284577, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284577 BINDING SITE, designated SEQ ID:5969, to the nucleotide sequence of

GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49741] Another function of GAM7052 is therefore inhibition of LOC284577 (Accession XP_211522.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284577.

[49742] LOC284585 (Accession XP_209277.2) is another GAM7052 target gene, herein designated TARGET GENE. LOC284585 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284585, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284585 BINDING SITE, designated SEQ ID:5500, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49743] Another function of GAM7052 is therefore inhibition of LOC284585 (Accession XP_209277.2) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284585.

[49744] LOC284591 (Accession XP_211529.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC284591 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284591, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284591 BINDING SITE, designated SEQ ID:507, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49745] Another function of GAM7052 is therefore inhibition of LOC284591 (Accession XP_211529.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284591.

[49746] LOC284628 (Accession XP_211561.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC284628 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284628, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC284628 BINDING SITE, designated SEQ ID:11163, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49747] Another function of GAM7052 is therefore inhibition of LOC284628 (Accession XP_211561.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284628.

[49748] LOC284708 (Accession XP_209332.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC284708 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284708, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284708 BINDING SITE, designated SEQ ID:17993, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49749] Another function of GAM7052 is therefore inhibition of LOC284708 (Accession XP_209332.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC284708.

[49750] LOC284723 (Accession XP_211602.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC284723 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284723, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284723 BINDING SITE, designated SEQ ID:7366, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49751] Another function of GAM7052 is therefore inhibition of LOC284723 (Accession XP_211602.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284723.

[49752] LOC284805 (Accession XP_209371.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC284805 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284805, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284805 BINDING SITE, designated SEQ ID:2369, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49753] Another function of GAM7052 is therefore inhibition of LOC284805 (Accession XP_209371.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284805.

[49754] LOC284865 (Accession XP_211672.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC284865 BINDING SITE1 and LOC284865 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284865, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284865 BINDING SITE1 and LOC284865 BINDING SITE2, designated SEQ ID:14664 and SEQ ID:15707 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49755] Another function of GAM7052 is therefore inhibition of LOC284865 (Accession XP_211672.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284865.

[49756] LOC284874 (Accession XP_209394.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC284874 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284874, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284874 BINDING SITE, designated SEQ ID:18809, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49757] Another function of GAM7052 is therefore inhibition of LOC284874 (Accession XP_209394.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284874.

[49758] LOC284934 (Accession XP_211696.1) is another GAM7052 target gene, herein designated TARGET GENE.

LOC284934 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284934, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284934 BINDING SITE, designated SEQ ID:16887, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49759] Another function of GAM7052 is therefore inhibition of LOC284934 (Accession XP_211696.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284934.

[49760] LOC284947 (Accession XP_211705.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC284947 BINDING SITE1 and LOC284947 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284947, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284947 BINDING SITE1 and LOC284947 BINDING SITE2, desig-

nated SEQ ID:10834 and SEQ ID:7168 respectively, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49761] Another function of GAM7052 is therefore inhibition of LOC284947 (Accession XP_211705.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284947.

[49762] LOC284950 (Accession XP_211703.1) is another GAM7052 target gene, herein designated TARGET GENE. LOC284950 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284950, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284950 BINDING SITE, designated SEQ ID:8376, to the nucleotide sequence of GAM7052 RNA, herein designated GAM RNA, also designated SEQ ID:296.

[49763] Another function of GAM7052 is therefore inhibition of LOC284950 (Accession XP_211703.1) . Accordingly, utilities of GAM7052 include diagnosis, prevention and treatment of diseases and clinical conditions associated with
